Mr. Falmer announced the amendment of the Boiler Inspection Bill making its provisions acceptable to the users of steam boilers for greenhouse purposes and was accorded a rising vote of thanks. Jackson Dawson was recommended for honorary membership. The death of N. B. Glass was announced. Secretary Craig recommended an appropriation of \$25.00 for a special premium to be offered at the fall exhibition of the Mass. Horticultural Society. An invitation to visit the plant houses of W. W. Edgar Co. on March 23 was unanimously accepted. It was announced that the April meeting would be ladies' night and would include a banquet.

WASHINGTON CLUB NOTES.

The last regular monthly meeting of the Florists' Club of Washington, prior to the convention, was held March 5, with good attendance. All officers of preceding year were unanimously re-elected, as follows: Peter Bisset, president; Z. D. Blackistone, vice-president; Chas. McCauley, secretary; W. H. Ernest, treasurer; board of directors, Thos. Field, Jos. Freeman, Jr., Jno. Robertson, W. S. Clark and Chas. McCauley.

NEWPORT HORTICULTURAL SOCIETY.

Mr. S. G. Harris, Tarrytown, N. Y., has donated a premium of \$15 for the best collection of roses at the June exhibition. The society, in addition to an unusually large number of premiums for exhibits by gardeners and others, has decided to provide in the schedule liberal premiums for plants, flowers and vegetables grown by school children. Prizes will also be awarded for the best school gardens, the president of the society to be the sole judge of the gardens.

The society voted not to insert the rule forbidding the use of supports for plants in the arrangement of groups, because the enforcement of that rule last year brought in fewer groups, and disappointing results in those put up. D. M.

ST. LOUIS FLORIST CLUB.

The St. Louis Florist Club held its regular monthly meeting on Thursday afternoon of last week. The meeting was very interesting, but the attendance was small, only sixteen responding to the call. The Flower Show committee reported that they were unable to use the \$10,000 guarantee fund, and it was voted to discharge the committee, with thanks for their great efforts in behalf of the club. The club voted to loan the Englemann Botanical Club their tables and vases for their spring flower show, to be held some time in early spring.

It was decided by a full vote that the meeting on April 11th will be the annual rose competition, open only for local growers, and \$50 in prizes will be offered. The trustees will have full charge of same and will request growers of new varieties to send blooms for exhibition.

Instructions were given to Chairman Smith of the trustees to make preparations for some kind of entertainment for the members and their families in order to celebrate the club's 20th anniversary. One hundred dollars was placed at their disposal for expenses.

THE FRENCH GARDENERS' SOCIETY OF LONDON.

This useful and prosperous society recently held its eighteenth annual dinner at the Cafe Royal. A representative company sat down, under the presidency of M. Lageat, Councillor of the Exterior Commerce of France. After dealing with the progress of the society and eulogizing its usefulness M. Lageat referred to France as the garden of Europe and that horticulture had always been patronized there and encouraged by the government. He reminded his fellow countrymen of fruit culture which was now being carried on under more difficult circumstances owing largely to American competition. This was especially noticeable in apples which had not only invaded the English market but also the Paris market. He thought this was a thing many French gardeners should see to.

MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

One of the most successful meetings this society ever held was that of March 13th. The carnation reigned supreme; there were novelties from abroad and standards from at home. We had roses, sweet peas and cyclamens also.

Dailledouze Bros'. Welcome secured a certificate of merit. F. R. Pierson Company sent Winsor and White Enchantress, previously certificated here. Bassett & Washburn, Hinsdale, Ill., sent two vases of red seedling, No. 20. It got a certificate of merit. John Riemels' Winsome, and red seedling, No. 32, each secured a certificate of merit. Geo. Harvey, Madison, N. Y., had two fine vases, one of them a white seedling of great promise. Alex J. Guttman, N. Y., showed Victory. Geo. H. Hart, gardener to R. D. Foote had three vases of carnations in three varieties. A. Herrington showed Robert Craig, Pink Enchantress, Mrs. M. A. Patten, Enchantress, Jessica and Fiancee at their best.

Other exhibits were rose Aurora from Paul Niehoff, Lehighton, Pa., which received a certificate of merit; rose Queen Beatrice from F. H. Kramer, which also received a certificate of merit; cyclamens from H. B. Vyse, gardener to G. E. Kissell; myosotis and carnations from John Heeremans, gardener to A. R. Whiting; carnations from Samuel Stewart and E. Reagan; carnation Victory and sweet peas from Andrew Kennedy, gardener to Dr. L. D. Ward, and carnation Robert Craig from Wm. Duckham.

We had quite a delegation from outside, among whom were Fred Heeremans, Lenox, Mass.; Harry A. Bunyard, N. Y.; Wm. Ross, Tarrytown; Parker T. Barnes of Doubleday, Page & Co., John Riemels, Woodhaven, L. I.; Joseph A. Manda, Orange, N. J. Three papers on the carnation in as many different aspects were read by Wm. Duckham, Robt. M. Schultz and Percy Herbert. Each received the thanks of the Society after they had answered many questions and discussed several points. Intense interest was manifested in the novelties as they were looked over.

The evening of April 10 will be Rose Night, which ought to prove a drawing card for both members and visitors. We want all the novelties we can get for that occasion, and can undoubtedly depend on the home growers for a creditable display of the standard kinds. Two papers on the rose are to be read, one by David Falconer and one by Andrew Kennedy.

COLUMBUS FLORISTS' CLUB.

The first regular meeting of the month was held last Tuesday evening. President Stephens in the chair, and the secretary being ill, M. B. Faxon served in his place. It gives the writer much pleasure to be able to say, that the display of plants and flowers was by far the best of the season. Messrs. Torrey, Brust, Williams, Meitzmaier, and Monk, who served as the prize committee, made the following awards: To I. D. Siebert for very well-flowered specimen of Mme. Van der Cruyssen azalea, 20 points; R. A. Currie for *Spiraea superba*, 15 points; Murillo tulips from Sherman F. Stephens brought him 15 points; Jacob Reichert

for Kaiser Kroon tulips, 10 points; and A. Wedemeyer 10 points for a *Genista fragrans*.

On the question of whether the penny packets of flowers and vegetable seeds shall be distributed free to the public school children or at a penny apiece as last year. A committee was appointed to confer with the Columbus Board of Education. I wish to say that our club is a unit in believing that it is far better for the children that they pay for their seeds.

As had been arranged at the last meeting, this evening had been set aside as ladies' night; so just as soon as we possibly could we closed business, and entertained our guests. The next meeting will be held Tuesday evening March 26.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting on March 15, President McGregor in the chair. J. W. Duncan of Boston gave a very interesting lecture on trees and shrubs. A certificate of merit was awarded James Salter for six pots of antirrhinum, Sutton's White Queen. This is a dwarf variety growing one to two feet in height and suitable for window or conservatory decoration.

Resolutions of sympathy were passed on the death of William J. Griffin. Mr. Griffin was gardener at the C. H. Tweed estate, Beverly Farms. He was a charter member of this society.

JAMES MCGREGOR,
President of the North Shore (Mass.)
Horticultural Society.

The above photograph of President McGregor was taken several years ago. Mr. McGregor is a native of Perth, Scotland. He came to the States in 1871, his first position being at the John L. Gardner estate in Brookline, Mass., under the late C. M. Atkinson. When the Joseph H. White estate at Brookline was laid out, Mr. McGregor went there as head gardener, and remained a number of years. At the present time he is gardener for Miss A. G. Thayer, West Manchester, Mass., moving there, with Miss Thayer, from Brookline eight years ago. He is a charter member of the N. S. H. S., being its first treas-

urer, and occupying that position from 1899 until 1906, when he was elected president, and was re-elected to that office for 1907.

ELBERON HORTICULTURAL SOCIETY.

The regular meeting of this society was held on March 4, vice-president Henry Wood in the chair. The schedule of the second annual flower show, which will be held on July 24 and 25, was drawn up and adopted. Some fine exhibits were staged, notably, stocks Queen Alexandra by A. Bauer; tulips Proserpine and Belle Alliance by J. Kennedy; violets Marie Louise, by A. Greib; violets La France by F. Dettlinger; and carnations by W. Swain. Cauliflower and lettuce were shown by F. Murray.

A delegation of the society visited the F. R. Pierson Co.'s establishment recently. W. F. Ross met them in New York and conducted them to the Florence Hotel, Tarrytown, where an excellent repast was served. After going through the greenhouses there, they enjoyed a sleigh ride to Scarborough. There carnations were seen in every stage of growth and presented a magnificent spectacle. The day was a most enjoyable and profitable one for all.

PENNSYLVANIA HORTICULTURAL SOCIETY.

The special feature of the monthly meeting on the 19th inst., was the address by W. Kleinheinz, gardener for P. A. B. Widener, "An American Gardener's Winter Trip to Europe." This was well received and was tendered the thanks of the society. H. L. Frost made some interesting remarks on "tree surgery"—a popular phrase for correct methods in pruning trees. Samuel Batcheler showed some very well grown Enchantress carnations, some of them averaging 4 1-2 inches. The spring show which opens on the 26th inst. was a live topic. The price of admission has been reduced to 25c. and it was voted to invite the school children during suitable hours so as to plant the seed that will bear fruit in days to come. Among out of town visitors were Mr. Craw of the Lord & Burnham Co. and Mr. Lautenschlager of Kroeschell Bros. Co.

DAYTON FLORISTS' CLUB.

At the last meeting of the Dayton Florists' Club, G. W. Bartholomew was elected president; F. W. Ritter, vice-president; H. H. Ritter, treasurer, and H. M. Frank, secretary. At a previous special meeting, parks were discussed, and a great deal of valuable information received from the members. J. B. Heiss and H. Haerlein offered the city their services, free of charge, to draw all plans for the new park system, and also superintend the same under the same conditions for one year. John H. Patterson has brought Mr. Olmsted from Boston to look over the grounds, and with his everlasting generosity for the benefit of our trade has paid the expenses of Mr. Olmsted out of his own pocket, an example well worthy of imitation.

A discussion was had at the last meeting as to the detriment to the trade caused by the fakirs who sell the cullings of the large central mar-

kets for a song, thereby depreciating the value of flowers and really getting the best flower buyers disgusted with the trade. As long as they were standing on the street corners it was not so bad, but since they have opened stores, a different aspect has been put on the matter. A resolution was passed that none of the retailers will patronize, henceforth, those growers selling to such channels.

CLUB AND SOCIETY NOTES.

The Worcester County Horticultural Society held its 65th annual reunion and banquet on the evening of March 13. President O. B. Hadwen was presented with a copper plaque from the members of the society, the presentation speech being made by Chas. W. Wood.

An organization to be known as the Grand Rapids Florists' and Market Gardeners' Club has been formed at Grand Rapids, Mich., with officers as follows: Pres., Henry Smith; vice-pres., Eugene Davis; secy., Edward Freyling; treas., N. B. Stover. Meetings will be held the first and third Monday evenings of each month.

The florists of Springfield, Ill., met at the store of A. C. Brown on March 7 to organize a club, in order that suitable preparations for the meeting of the State Florists' Association in that city, in February, 1908, might be made. Officers were chosen as follows: President, A. C. Brown; vice-president, G. M. Brinkerhoff; secretary, G. W. Jack; treasurer, George Van Horn. A. C. Brown, A. T. Hay and George Van Horn were appointed a committee to draft by-laws, etc.

DURING RECESS.

On Friday evening, March 15, the proceedings connected with the visit of the American Rose Society to Washington were brought to a close with a bowling contest, participated in by the representatives of Philadelphia, Baltimore and Washington, the trophy being a handsome silver cup, donated by the Baltimore Club. Washington won out, as the following scores will show. The ceremony of filling the cup followed, accompanied by a sumptuous feed and "speechifying," by eminent visitors, regardless of the midnight hour:

WASHINGTON.

	1	2	3
Cooke	167	161	155
Shaffer	161	158	188
Simmonds	157	168	151
McLennan	150	155	194

	757	798	797

Total—2352.

Two more games are to be played, one at Philadelphia and one at Baltimore to decide the permanent ownership of the trophy.

AMERICAN ROSE SOCIETY

THE BANQUET AT WASHINGTON.

After the labors of the exhibition and business sessions it was a delightful experience to the members of the American Rose Society when, on Thursday evening, they were ushered into the lavishly decorated banquet hall of the Arlington hotel, the music of an orchestra adding to the impressiveness of the scene as the party of over one hundred and fifty ladies and gentlemen, members of the Florists' Club of Washington and their guests, took their places at the flower-laden tables.

After the banquet had been served President Bisset extended a cordial welcome and congratulated the Rose Society upon the increasing love for the rose and the growing interest manifested in its cultivation. He then introduced J. R. Freeman as toastmaster, who made a very happy address and called upon Hon. Simon Wolf to respond for "Our Country." At the mention of President Roosevelt all arose and cheered. Mr. Wolf spoke of the glorious privilege accorded every race and every nationality to come and find a home in a free country, a heritage of which we should be proud and transmit with all its blessings to generations yet unborn. All that is grand in sentiment and great in execution is within our reach and the "square deal" is our inalienable birthright.

President Simpson responded for the American Rose Society, which he said was much more than a trade association, its motto being "A bush in every garden, a rose in every home" and which stands for education in the beautiful.

District Commissioner H. B. F. Macfarland was the next speaker, his topic being "Washington the City Beautiful." He spoke eloquently of the rose and its romance, of the American Rose Society as a "League of Beauty" and of the plans for the beautification of the National Capital. He urged that senators and representatives should be encouraged in every act of legislation and appropriation which shall tend to the embellishment of the nation's capital city.

George H. Brown, for half a century connected with the park department of Washington, spoke of park development in the city since the initial work was begun by A. J. Downing, the reclaiming of waste places and the hopeful prospects for the future extension and embellishment of the public grounds.

Prof. E. T. Galloway spoke for the Department of Agriculture, telling of its policy and work in advancing the agricultural and horticultural welfare of the country and the enormous development of the trade on many lines within the past twenty years.

Patrick O'Mara responded for the gardener and his work for the rose. He said that the gardener, with his big heart and clear head, is the Atlas who bears the horticulture of the world on his shoulders. The real gardener, he declared, is not honored enough. There is glory in his title and no happier man treads God's footstool than the successful gardener, satisfied with his position. He paid tribute to M. H. Walsh, James Comley,

W. A. Manda, E. G. Hill and others for their services to the rose and took occasion to make gallant allusion to the presence of the ladies on this occasion.

W. R. Smith received an ovation as he arose to respond to the toast of "The Past, Present and Future of Horticulture." Flowers, he said, were made for the service of the soul and the gardener does the work. He was proud of the title of gardener.

President Wm. J. Stewart responded for "Our Parent Society, the S. A. F." The speaker extended to the American Rose Society and the Florists' Club of Washington the congratulations of the parent society on the success of this event. He said that during the preceding days the executive officers of the S. A. F. had been busily engaged in planning for the coming year of the Society's activities and endeavoring to carry out the maternal instincts of the "parent" society in endeavoring to bring about closer fraternal relations between all members of the great family of horticultural bodies, to broaden its scope and enlarge its influence and usefulness. He referred to W. R. Smith's appellation of "New Hub of the Universe" as given to Washington and expressed gratification that Washington had shown so much wisdom in imitating the example set by Boston—the real "Hub of the Universe" in bringing in the ladies to enjoy the banquet.

W. F. Gude spoke to the toast of "Our Guests." He advocated unity in all things and expressed sincere sentiments of love and friendship for the guests, hoping that the memory of this occasion may last as long as life for all who participated.

"The Ladies" was the toast assigned to Robert Craig and that eloquent speaker did full justice to the inspiring theme, which, he declared to be the most important toast that can be proposed on any occasion, at any time, in any language or in any country. His word picture of the scene in Eden when the first gardener lost his job will not be soon forgotten by those who listened to it.

E. G. Hill entertained the audience with some amusing stories and submitted that two features of the affair had struck him as remarkable, viz.: Mr. O'Mara's tribute to the ladies and Mr. Craig's knowledge of Scripture. Robert Kift then sung some new verses recently added to his song "It all goes into sash." W. H. Elliott and Benj. Hammond spoke in praise of the work and the hospitality of the local organization and with votes of thanks and Auld Lang Syne adjournment was reached long past the midnight hour.

ADDITIONAL EXHIBITION NOTES.

The group of rambler roses from M. H. Walsh was, as in Boston last year, the sensational feature of the exhibition. Besides the better known favorites originating with Mr. Walsh there were Coquina, Delight, Babette, Le Fiamma, Paradise Excelsa a heavy trussed double pink, Red Riding Hood a dark crimson, and Galaxy a superb rich double pink with long trusses of bloom.

W. A. Manda staged a group of new

Group of Rose Society Visitors at Washington

and rare plants, notable among which were *Asparagus elongata* in bloom, *Lycaste Mandiana* and other interesting novelties. Lager & Hurrell displayed a collection of rare orchids and Ed. S. Schmid aquatic plants in variety.

The decoration of the exhibition hall and the banquet room by George C. Shaffer was a striking demonstration of that gentleman's artistic abilities.

The mantel decoration on the first day by Z. D. Blackistone with roses and ferns and on the second day by F. R. Pierson Co., with Winsor carnations was one of the most admired features of the exhibition, the latter repeating the pronounced success made at Toronto. As a decorative flower in such work, associated with delicate ferns and asparagus Winsor is unexcelled as its color is equally effective and satisfactory under any kind of light.

At the close of the banquet at the Arlington Hotel, Peter Bisset the raiser of the rose Queen Beatrice made announcement that the story circulated publicly to the effect that he had received \$30,000 from the sale of the rose was false and misleading and that he would not tolerate its repetition. The actual amount paid Mr. Bisset for the stock was very much less; one of the daily papers of the following day stated same to have been \$150.

On the closing evening of the exhibition the cups and other trophies were presented to the winners by Secretary Hammond from the platform in the exhibition hall. Mr. Hammond's remarks were very witty and pertinent as he handed over the articles to their respective owners. At the close president Simpson said a few parting words, expressing gratitude to the hosts of the occasion and hopeful promise for the meeting next year at Chicago.

Louis Freeman was highly complimented on the manner in which he conducted the exhibition as general manager. There were many difficulties in the way and the manner in which they were met and overcome was highly creditable to superintendent Freeman and the good words said of him were well deserved.

LITTLE JOURNEYS BY THE GINGER JAR MAN.

II.

The White House.

Scene: The Rose Show, Washington. A question comes from the speaker's platform. Would we like to shake hands with the president? Everybody seems to be of one mind about that and so, headed by President Bisset and President Simpson we marched about a hundred strong to the White House, passed safely the guardians of the portals and arrived shortly in the East Room, where we had the pleasure of presenting fifty blooms of prize-winning Richmonds to the chief executive of the nation. His astonishment and his keen appreciation of the compliment were both plainly apparent. Evidently most of the people who go to see Theodore go to get something and not to give anything away and so this crowd of flower growers bearing a sample of their best was a new experience.

Robert Craig in his most suave and dulcet tones told the story, the why of our visit and the wherefor of the gift. Bows and smiles from the president who then shakes with Gurney Hill, the raiser of Richmond, and thanks the good Lord that we have some in America who can go those clever foreigners one better and breathe a prayer that all other enter-

and sciences in America may produce Gurney Hills ad. lib. After which we all look to see if our good right fist is clean and pass along the line. Some of us are pretty nervous and worked up. Langjahr looks pale and fidgety and evidently feels like taking a sneak thro' some side door. Heacock who is also well up in the crowd seems to be counting his democratic beads and crossing himself. O'Mara further down the line beams like the morning sun and seems altogether happy and unafraid—a worthy representative of the unterrified democracy of Jersey City. By and by it was Job's turn. Your humble servant of the Ginger Jar was not far behind Job. Well, gentlemen, I am pretty awkward but I hope to goodness I can make a better bow and handshake than Job. Then Phil. came along. I was glad to see that Phil. was just about as flustered as I was and only got half through his remarks when the inexorable sergeant-at-arms pushed him along.

The East room is ginger-colored all through. Ginger colored curtains, ginger colored mirror frames, ginger colored wall paper, ginger colored pianos, ginger colored everything except the two big ginger jars. The latter are blue.

Finally the function was all over and then a photograph of our crowd was taken on the steps of the treasury building.

It was the proudest moment of my life when I shook hands with the ruler of this great republic and an occasion that will long be remembered by me. I am busy now retailing in Philadelphia the hand that shook the hand at a handsome profit but to all the readers of HORTICULTURE it is free. Come on!

GEORGE C. WATSON.

OUT-DOOR ROSE CULTURE.

A paper read before the American Rose Society by Theodore Wirth.

I consider it somewhat presumptuous on my part, to appear before you expert rose growers, and to think that I might be able to say anything that may be new and possibly instructive to you, and I confess, that when I first received our president's request for a paper, I was readily inclined to decline. My eyes, however, took in the letter-head on which Mr. Simpson's invitation was written, and up in the left corner it read:—"A Rose for Every Home, A Bush for every Garden."

Gentlemen, this being the motto of our society, I am with you heart and soul, and I appear before you as a strong advocate of using the society's influence and working organism, to advance out-door rose culture in general and by every available means, and not as a rose grower of special experience and knowledge by whose suggestions and explanations you might profit. Most of you, undoubtedly, are growing roses under glass, and while you take due interest in out-door culture and probably sell plants in planting season and cut flowers during the Month of Roses, still your main business interests are centered in your indoor cultures, in your winter roses which bring you satisfactory pecuniary returns, reward you for your labor, investment, energy and the patient watchful care bestowed upon your plants.

The exhibits in the hall show us your skill, your wonderful achievements of hybridization and cultures and your love for your noble profession; and with you we are proud of your achievements, and with you we enjoy our sojourn amongst those creations of yours,—the roses of mid-winter, while all plant-life outside is dead. But as I look over this splendid display, my thoughts wander ahead, my vision leaves the narrow enclosure of this room, the hall and your hundreds of acres of greenhouses, and my longing lands me in a fairyland, in God's own Paradise, the home of our Queen of Flowers, the Out-Door Rose Garden.

I want you to accompany me on this most pleasurable of all pleasure trips, and I want you to start out early. It is June, the month of roses, and truly the month in which I wish we could hold our convention. The sun is rising on a clear sky, and the dew is on flower, leaf, frond and blade. The atmosphere is refreshing and the birds are jubilant in their renewed joy of life. We enter our garden of well cultivated roses, and God! what a glorious sight. How beautiful are the plants in their perfection of foliage, their abundance of sweet scented, strong, well-built flowers; what a richness and variety of colors and shades, and what a wholesome and refreshing fragrance is in the clear morning air. Reverently we walk along those beds of indescribable beauty, under these arches of drooping bowers of flowers, all glittering and sparkling with the new-born sunshine, reflected in millions of diamond dew drops.

We have met the rose at home in her very best form and beauty, in her modest garb and surroundings; and gentlemen, you will all agree with me that your very best creations of forced culture, be they displayed in the cost-

liest, most luxuriantly furnished apartment of the millionaire's mansion surrounded by priceless art treasures and draperies, are outshone in this garden, and that the wealth with which your coveted products are surrounded is an insignificant factor compared with this garden's draperies and attractive backgrounds of simple but majestic trees, shrubs and vines. The effect of the displays of your creations and products artistically and tastefully arranged with all known arts of decoration is gorgeous, pleasing, fascinating; but the effect of our rose garden in all its simplicity is unsurpassingly sublime.

I suppose I have made myself clear by this time that I am an enthusiast on out-door rose culture, without any attempt to belittle your efforts and achievements as indoor growers and decorators. Indoor rose culture has many advantages over out-door culture, as it has within its reach an unlimited list of varieties and better yet a practically unobstructed field of hybridization. Yet the list of varieties of all classes of roses, available for out-door culture is so large as to satisfy practically all reasonable demands; in fact, it is nearly as much a matter of cleaning out and discarding many that are not worthy of culture because they are superseded by so many betters, as it is to get new varieties.

Thanks to the earnest and successful efforts of the modern hybridizers of both America and Europe, the list of real everblooming roses adapted and hardy for out-door culture is increasing from year to year. I refer to the class of Hybrid teas.

I notice in the last catalogue of Alex. Dickson & sons of Newtownards, Ireland, that out of a list of 82 pedigree seedling roses, 43 are Hybrid teas, 21 Hybrid perpetuals, 9 Teas and 9 Singles. This is but the cream of a numberless list of new seedlings, but many of them, undoubtedly, will prove available for out-door culture. The Hybrid teas are now on comparatively the same epoch of development as were the Hybrid perpetuals some 30 years ago, when the firm of Eugene Verdier of Paris alone, offered between 40 and 50 new hybrids of that class every year from 1872-1880, and the number introduced since then is legion.

The Hybrid tea rose will win for itself recognition and preference, as an out-door rose, the more its hardiness becomes known. It is in reality this class which is entitled to the name "Perpetual Bloomers" in the proper sense of the word. I think that Hybrid-remontant is the proper name for what we call now Hybrid perpetual; for the word "remontant" really means what they do—bloom a second time (once more), but not continually during the season, as do the Hybrid teas, Teas and Polyanthas.

Let us see what we have today amongst the old standbys and newcomers well adapted for out-door culture. I do not claim for all those I mention the title, The Best, for therein we differ according to taste, experience and observation. I simply mention them as varieties with which I have been successful and which seem to me to merit a place in every rose garden whose climatic condition is

congenial to their growth. Every color and shade is represented.

In white and shades we have the following Hybrid Remontants:

Frau Karl Druschki, Mabel Morrison, Marchioness of Londonderry, Margaret Dickson, Mavourneen, Perfection des Blanches, Coquettedes Blanches and Coquettedes Alpes.

Hybrid Teas—Augustine Guinoisseau, Helene Guillot, Kaiserin Augusta Victoria, Mildred Grant, Marquise Jeanne de la Chataigneraye, Souv. de Mme. Eugene Verdier, Maman Cochet.

In red and its many shades we have the following Hybrid Remontants:

Etienne Levet, General Jacqueminot, Gloire de Margottin, Horace Vernet, Jules Margottin, Jubilee, Marie Baumann, Oscar Cordel, Prosper Langier, Reynolds Hole, Robert Duncan, Sultan of Zanzibar, Hybrid Teas—Balduin, Dean Hole, Etoile de France, Ferdinand Jamin, Gruss an Tepitz, Liberty, Rev. David R. Williamson, Richmond, Papa Gontier.

In Rose or pink we find Hybrid Remontants:

American Beauty, Anna de Diesbach, Baroness Rothschild, Baronne Prevost, Clio, Caroline de Sansal, Comtesse Cecile de Chabrillant, Countess of Roseberry, Duchesse de Vallombrosa, Dupuy Jamin, Eugenie Verdier, Heinrich Schultze, Helen Keller, La Reine, Mme. Gabriel Luizet, Magna Charta, Marchioness of Downshire, Marchioness of Dufferin, Marguerite de St. Amande, Marquise de Castellane, Mrs. John Laing, Mrs. R. J. Sharman Crawford, Oakmont, Paul Neyron, Pride of Waltham, Rev. J. B. M. Camm, Susanne Marie Rodocanachi, Victor Verdier, Hybrid Teas—Captain Christy, Caroline Testout, Dr. J. Campbell Hall, Kilmarney, La France, Mme. Abel Chatenay, Maman Cochet, Mrs. W. J. Grant, Reine Marie Henriette, Kate Moulton.

In a class all by themselves we have the Polyantha roses, which in my opinion, are not known and grown enough. I should like to call them the children's roses. They are so easily grown and are the real bedding roses. There are as many as 30 or 40 varieties of easy culture, namely:

Red—La Prosperine, Leonie Lamesch, Liliput, Mme. Norbert Levavasseur, (Baby Rambler), Ma Petite Andree, Pink Souper, Perles des Rouges.

Rose or Pink—Gloire des Polyantha, Ma Fillette, Mlle. Cecile Brunner, Mignonette, Petite Constant, Petite Madeleine, Philippine Lambert, Primula.

White—Annie de Montravel, Bellina Guillot, Clothilde Souper, Flocon de Neige, Josephine Burland, Katherine Zeimet, Marie Pavie, Miniature, Mosella, Paquerette, Princesse Marie Adelaide de Luxembourg, Schneewittchen, Snowball.

Yellow—Etoile d'Or, Etoile de Mai, Emilie Potin, Eugenie Lamesche, Filius Strassheim, Golden Fairy, Le Bourguignon, Perle d'Or, Princess Elizabeth Lancelotti.

The Rugosa family is also becoming more prominent through recent introductions and we have now the following varieties:

Red—Atropurpurea, Mme. Chas. Worth, Mrs. Anthony Waterer, Rugosa rubra, Souv. de Pierre Lepeudrieux.

Rose—Belle Poitevine, Calocarpa, Conrad Ferdinand Meyer, Delicata, Rose Apples.

White—Blanc double de Coubert, Fimbriata, Mme. Georges Bruant, Rugosa alba.

The following Moss roses deserve a place in the garden:

Red—Celina, Crimson Globe.
Rose—Crested, Mme. Moreau.
White—Blanche Moreau, Comtesse de Murinais, Perpetual White, White Bath.

In way of trailers and climbers we have also a large variety representing Hybrid Remontants, Hybrid Teas, Teas, Noisettes, Bourbons, Polyanthas, Mosses, Rugosas, Gallicas, Wichurianas, Hybrid Multifloras, Moschatas and Sempervirens:

Red—Cheshunt Hybrid, H. T.; Climbing Jules Margottin, H. R.; Climbing Papa Gontier, H. T.; Crimson Rambler, Pol.; Euphrosine, Pol.; Hlawatha, H. Wich;

Paul's Carmine Pillar, H. T.; Philadelphia Rambler, Pol.; Reine Marie Henriette, H. T.; Rubin, Pol.

Rose or Pink—Climbing Caroline Testout, H. T.; Climbing Clothilde Soupet, Pol.; Climbing La France, H. T.; Climbing Mme. de Watteville, T.; Climbing Mrs. W. J. Grant, T.; Climbing Souv. de la Malmaison, B.; Climbing Victor Verdier, H. R.; Cumberland Belle, Moss; Dawson, H. Multi.; Debutante, H. Wich.; Dorothy Perkins, H. Wich.; Helene, Pol.; Karissima, H. Wich.; Lady Gay, Pol.; Leuchstern, Pol.; Mme. Berard, T.; Minnehaha, Paradise, Pink Pearl, H. Wich.; Pink Roamer, H. Wich.; Psyche, Pol.; Queen of the Prairies, Setigera.; South Orange Perfection, H. Wich.; Sweetheart, H. Wich.; Universal Favorite, H. Wich.; Wedding Bells, Pol.; Wm. Egan, H. Wich.

White—Almee Vibert, N.; Brunoni fl. pl., Mosch.; Countess of Lieven, Arv.; Gardenia Flora, Pol.; Climbing Kaiserin Augusta Victoria, H. T.; Climbing Niphetos, T.; Mme. Alfred Carriere, H. N.; Manda's Triumph, H. Wich.; Moschata alba, Mosch.; Rampant, Spv.; Schneelicht, Rug.; Splendens, Arv.; Thalia (White Rambler) H. Mf.

Yellow—Gardenia, H. Wich.; Wm. Allen Richardson, N.

While speaking about Climbers, would it not be feasible to bud the Baby Rambler in numbers on the main shoots of the Crimson Rambler or other vigorous climber covering a trellis or arch, and so transform the ordinary Rambler into an everbloomer? I suppose this could be done successfully by relieving the Rambler of its own flowering wood and by renewing the budding yearly on the new wood, which is grown along to replace the old.

No rose garden would be complete without our wild and native roses, and we can use them as an introductory feature in the way of border plantations around the garden. They are: Rosa Alba, Blanda, Canina, Carolineana, Lucida, Multiflora, Nitida, Rubiginosa, Rugosa, Setigera and many others.

The pretty Midget Rose, Rosa multiflora nana, should be freely used for borders along trellises. They are so easily grown from seed, if sown inside as early as February, potted up and planted out in May.

Other miscellaneous garden roses not to be forgotten are:

Soleil d'Or, A. B.; Persian Yellow, A. B.; Harrison's Yellow, A. B.; Austrian Copper, A. B.; York and Lancaster, Gallica; Stanwell's Perpetual, Damask; Cabbage, Centifolia; White Banksian, Banks; Yellow Banksian, Banks; Bennett's Seedling, Ayrshire; Mme. Plantier, Gallica.

Lord Penzance's Sweetbriars Amy Robsart, Annie of Gierstein, Brenda, Catherine Seyton, Edith Bellenden, Flora M'Yor, Green Mantel, Jeannie Deans, Julie Manning, Lady Penzance, Lord Penzance, Lucy Ashton, Lucy Bertram, Meg. Merries, Minna, Rose Bradwardine.

Of all plants deserving special care and attentive culture, the rose, in my mind, is first. I regret that some of our growers and distributors to amateurs should state in their catalogues and guides on rose culture that the necessity of thorough preparation of soil, proper cultivation, etc., is a story of ancient belief, and that roses will grow in any soil, location and condition.

They will grow, yes, but will they flourish? Do not let us deceive and disappoint the lovers of roses for the sake of making easy money, for it is unjust and does not pay in the end, for one disappointed customer will discourage many prospective buyers, while every successful amateur rose grower will induce and instruct all his friends and neighbors. Let us tell the

people that the rose is a great feeder and delights in a heavy loamy soil enriched by cow manure, and let us ask them to prepare their beds before planting, to a proper depth, provide the necessary drainage, if necessary, that thorough cultivation is better than continuous watering and sprinkling; in short, give them the information that will make them expert rose growers and we will make them happy and our friends forever. The real lover of roses will not shrink from the expense and labor involved in such culture and his success will convert others.

The very growers who advocate the planting the roses in any old way seem to have to go away from home to find subjects fit for illustrations in their catalogues, intended to show good rose culture. Good rose culture, however, means good deep loam, renewed fertilization of well decomposed manure properly applied, frequent cultivation and appropriate watering at the proper time, etc. This is the treatment of the soil to which the building up and sustaining of the root system of the plant is entrusted.

The part of the plant above ground demands equal attention. Beginning in spring we must induce and balance the growth of the flowering wood, by proper pruning, and to do this properly we must consider the habit, character and strength of the plants. Vigorous Hybrid Remontants we should relieve of all weak and superfluous wood, being satisfied with from 6 to 8 main shoots to a plant, and those we must cut back to from 5 to 7 eyes. Weaker plants we must prune more severely yet, cutting back to 3 or 4 eyes. The Hybrid Teas, which do better in not too heavy a soil, we must relieve of all weak and dead wood, and cut the remainder back 1-4 to 1-3 of their length. Teas and Polyanthas, of course, we won't cut back at all except to remove old and dead wood, with the object in view to keep the plant vigorous by inducing and favoring a certain percentage of young growth.

During the flowering season we must constantly be on the watch. Fading flowers should be picked off every day and that before they drop all their petals. We can procure a second, and with some varieties of the Remontants, an almost continuous crop of flowers, by pruning past flowering shoots radically back to 6 or 8 eyes during the summer season.

We must supply the necessary atmospheric moisture to our plants by a thorough syringing from below, applied after sundown; a treatment to which the rose readily responds during dry weather. Such sprinkling, furthermore, at least partly overcomes the minor insect pests, such as the aphid, red spider and rose hopper. We must closely watch for the arch enemy of the rose, the chafer, and pick him off for his kerosene bath, while we have to crush the leaf-roller with unrelenting energy and thoroughness. Slugshot, hellebore, bordeaux mixture, whale-oil soap and similar remedies must be on hand for ready use for other pests, mildew and other diseases and must be applied in good season and effective manner.

For the over wintering of our roses we must take due precaution by pro-

viding the necessary cover. The most effective, in fact the only satisfactory method, is to tie the shoots together and heap up the soil around the rootstock as high as possible, and if the plants are properly distanced, namely 2 feet to 2 feet 6 inches for the H. R. and 16 to 20 inches for the H. T., such heaping is entirely feasible. Then after frost has set in, put in a good covering of manure around those hills and ordinary bedding or litter between them. In spring remove the bedding, pull the manure down between the hills, rake your soil over it and do your pruning as soon as the eyes begin to break.

Standard roses I think are most successfully grown by lifting them every fall and burying them in 18 in. or more of soil. Better yet have them in small tubs and bury tub and all. Climbers can be bent down and buried in the ground. By this method the bark is however easily cracked if not very carefully handled, and the result is the loss of many of the main shoots. Thorough binding up in long straw with outside paper cover, therefore, seems the most advisable cover for climbers in need of such protection.

Where the winter is not too severe, I consider fall planting preferable to spring planting provided the planting is done in good season and not later than November 15th. There in short are the general cultural directions under which I have seen the happiest results in the rigid climate of the east, Connecticut for instance.

To us all these matters of culture are a matter of course, but for the amateur they are perplexing to begin with but should not be discouraging. No one today hesitates to acquire an automobile, not knowing the least thing about its mechanism or underlying principles of locomotion. To begin with he or she will be puzzled, but as gradually through experience and study the mechanism and working principles of the machine explain themselves, the amateur chauffeur becomes the self-confident master of this complicated creation of the professional machinist, and he not only runs the machine but attends to ordinary repairs and before long has some suggestions to make for improvements. Why should the same amount of intelligence not be able to solve the so much easier problems of competent and sensible rose culture.

For instance, there is quite a difference of opinion as to the relative value of budded or grafted plants and plants on their own roots. I think we most all agree that budded plants are giving much better results as to vigor of growth and quality of bloom, but we realize that the average amateur grower may be better served with plants on their own roots, because there will be no danger of his losing his flowering plant through the unrecognized or unnoticed growth of wild suckers.

Now I think we ought to at least give our friends, the customers, credit for ordinary intelligence, by telling them that if they will compare the foliage of a wild rose with that of a hybrid, they will soon learn to distinguish between a sucker and the real thing; and they will understand that by diligently removing the former

they will have the very best results with the latter. Ardent lovers of flowers will be glad to learn that. For those who are too busy or don't care, the own root plants I admit may be better, but I believe it is only fair to state to the amateur the difference between the two.

If the roses are budded low, the stock eyes removed before planting and the roses planted good and deep, comparatively little sucker trouble will be encountered, and I for one shall want budded plants wherever I have something to say in this matter of choice.

The planting of one year roses, which if not especially advocated is at least widely advertised, is all right as far as it goes, but it must to a certain extent be misleading and disappointing to many amateur rose growers. The offer of one dozen rose plants for \$1.00 guaranteed to bloom the first year from June to October is certainly very attractive and tempting, but if this one dollar is the extent of the available funds for such investment, I would advise my customer to take 4 or 6 two-year old budded plants, plant them wider apart, be satisfied with a few flowers the first year and get the benefit of better and more blooms forever afterward.

The one-year old plants, which have been planted close, will, if they grow, crowd each other in no time and consequently should be transplanted the second or third year at the latest, which in most cases is not done. If they don't grow it is because the soil to which they have been transferred out of the pots is not congenial, and the plant in itself is not of sufficient vigorous stock to overcome this change of soil texture and quality. Yet the buyer has planted them as directed—in any ordinary soil. The two-year old plant will fare better and give much more return in every case.

Before I leave the subject of one-year old plants I want to ask the question whether it is not a fact that those plants on their own roots are mostly winter cuttings from more or less continually forced stock, and some of them second cuttings from rooted cuttings in the bench? If so, can it be reasonably expected that plants so produced will attain the vigor, productive quality and sustaining strength and hardiness so essential to outdoor culture? If not, is it not more or less a fraud on the public justifying the saying, "Cheap cloth, tools or help are too dear at any price." I claim that all own-root roses intended for outdoor culture should come from soft or hardwood cuttings from outdoor plants. I say, propagate from good stock and offer good stock if you want to grow good roses and satisfy and retain your customers.

As already stated, I am not an expert rose grower and don't pretend to be, but I believe that here as elsewhere the underlying principle in securing good results, is good structural foundation. It is so evident that propagation from continuously forced plant stock and through too soft-wood means degeneration and deterioration of quality and strength that I need not dwell on this subject any longer. The best proof of this statement is the rapid degeneration of so many varieties used for forcing for a period of

ten or even less years, compared with the same varieties grown outdoors and propagated from outdoor plants. There is one thing the buyer of budded plants is pretty sure of, and that is he need not fear to get in his purchased plants, the weak degenerated blood which he is apt to get by buying own root plants, and so-called slips.

To discuss such matters is the principal purpose of our gatherings. The question has been put by our Executive Committee, "What can the A. R. S. do to help the lovers of roses and the members of the society?" There are many ways of accomplishing the same purpose, provided said purpose is clearly defined and understood. To benefit the lover and amateur grower of roses, we must reach him outdoors. We must stimulate and advocate outdoor culture, and educate those we reach with our pleas. To benefit the amateur means to benefit the growers.

To encourage outdoor rose culture, I would suggest that we work along the following lines:

1. Suggest and advocate through our trade papers and through all other possible means the introduction of public rose gardens in public parks; not only in the large cities, but everywhere. Such gardens could be inaugurated and helped along through donations of plants by local growers and dealers, and where the experienced gardener is missing, help along this line might be furnished through the same sources.

2. Let the florist clubs and other kindred societies of the country arrange for free lectures, giving the public plain, true and comprehensive instruction and information on the subject, and have, if possible, a rose show connected with the lecture.

3. Let each rose grower or nurseryman establish a small rose garden in which he practises good culture; let him arrange for a rose show of his own and invite his customers near and far to his grounds when the plants are at their best.

4. Let the A. R. S. direct, or through local florists' clubs award prizes in medals or certificates to amateur rose growers for good cultures.

5. Would it be possible for the A. R. S. to establish somewhere in the Middle States in connection with a Horticultural College or a reputable commercial establishment, an experiment station or trial ground, where new introductions could be tested to their true value from all points.

6. Would it be possible to have in that case a semi-annual convention at that trial garden, or could not at least a standing committee on novelties or the Executive Committee meet there every year in June to pass judgment on such plants as may be on exhibition there, and would not such reports be of great value to the grower as well as the amateur?

These are questions and ideas that have occurred to me during my services as a park-man for the last few years, and I beg to submit them to you for consideration and discussion. I know that every rose successfully planted and grown brings roses, smiles and happiness to some heart and makes it better, and I love to work with you all as a gardener in this garden of usefulness and uplifting happiness.

AN IDEAL IN ROSE RAISING.

A paper read before the American Rose Society by E. G. Hill.

Your president and executive committee have suggested as a subject for my paper "The advisability of having an ideal in mind when attempting to raise new and improved varieties of roses."

It would have been better if you had selected some one to prepare this paper who has had a broader and more extended experience bearing upon this particular line of work than myself; it is a subject full of interest, of mystery and of elusive leadings, and of which I am free to confess I have very little exact knowledge. The more I have tried to inquire into the laws governing cross-fertilization the more surprised I have been at the very little tangible knowledge possessed by plant growers, for it would seem that after generations of attempts at crossing that we should find much more accurate information at hand, and at least a few formulas which might be followed with some certainty.

These, however, are not yet at hand, but that is no occasion for discouragement, for of one thing I am convinced, there are underlying laws which guide to certain results, and while at present we are only groping toward them in the dark, patient persistence will finally give us our working theorem which will prevent the present waste of utterly haphazard effort, and reduce it to a science and an art at least approaching the exact. Nature does finally reward the painstaking investigator, and she does reveal enough concerning her manners and methods to give incentive to those who would know her better.

I should say, by all means, have an ideal in mind when attempting the production of a new variety of rose through the medium of cross-fertilization. In fact, the ideal is persistently forced upon the working florist by the very shortcomings of his every-day favorites; the amateur may please his fancy, and delight himself with the odd and curious results of haphazard work, and there is much pure pleasure to be derived from it; but the florist, with all his love and reverence for the beautiful in nature, has a sterner purpose in view; the rose has descended to commercialism; the rose grower must raise it to a pinnacle of perfection where it can dominate its special line of commerce, without apology for any weakness. And it must be confessed at the present time that the usefulness and the profit of nearly every variety of commercial rose is greatly impaired by some serious drawback to its reliability; to eradicate these faults in the parent is impossible; to produce a seedling that shall retain the good points of the parent with the weakness eliminated is well worth working for; this, then, forms an ideal; definiteness of purpose in any line of activity is essential to results; and quite as important as the ideal, is the working plan which must be formulated to attain the end in view.

Some years ago I began working on red roses, hoping to secure something better than Meteor, Teplitz and Litta, all fine in their way, though stubborn material in the hands of the rose-fancier; my initial work was begun with these varieties, and only after a good lapse of time have results been

forthcoming. The purpose in view was first to secure a vigorous constitution in the progeny; that must always be first; seedlings showing exceptional vigor have again been bred with Liberty, Richmond, American Beauty, Queen of Edgely, American Beauty best H. P.'s. My aim has been in this particular line of work to secure a red rose that would flower freely under glass in winter; furthering this idea of improving the red varieties, pollen was taken from American Beauty and over 300 crosses were successfully made last year (1906) and these latest seedlings are now nice little plants growing vigorously in their little pots. My hope in thus securing American Beauty pollen is to secure if possible a long stemmed, free blooming winter forcing variety; a previous effort in this line has given us a rose superior in color and size to American Beauty with the additional advantage of producing flowers as freely as Richmond or Bridesmaid.

Quite a separate line of crossing has been to improve upon the size of Rosalind Orr English while retaining its general color scheme; with this in view hundreds of crosses have been made with pollen taken from Richmond, Queen of Edgely, American Beauty and Paul Neyron during the season of 1905; the progeny from these have mostly flowered, with a result that some thirty have been retained for a second year's trial; two out of the thirty selected are of unusual promise; one of these is American Beauty X. Rosalind Orr English, and is especially notable for its stiff, long stem and large size; the other cross is Richmond X. Rosalind Orr English which is intermediate in color between its two parents with the additional merit of possessing double the number of petals that either of its parents possess. The above two instances are cited to show concentrated effort on a given line in a multiplicity of crosses. I give the above in detail to illustrate my conviction of having an ideal in mind when working for a given end. Perhaps some day we will find a means to the end desired by simply making one direct cross.

I do not know to a certainty, yet I believe that Mr. Joseph Pernet, of Lyons, has followed out a similar certain line in his raising of new varieties; I judge this by the similarity in growth, foliage, and the general build of the flowers in his originations. Take Pres. Carnot and Antoine Rivoire, note their general characteristics and I think it is easy to detect a similarity of lineage running on down through his Madam Rivary, Le Progres, Joseph Hill, Mme. Jenny Gillemot, Mme. Philip Rivoire, Mme. Melanie Soupert, and Baron Sinety and three of his very latest introductions, Mrs. Aaron Ward, Mme. de Liuze, and Renee Wilmart Urban show the same general characteristics. It would be interesting to know if M. Pernet had been following out Mendel's theory in his breeding of roses. Not all his productions are allied to the varieties mentioned above, for his Etoile de France, Marquis Litta, Soliel d'Or and Laurent Carle are quite distinct from the type cited above.

If the law of inter-breeding be correct, gathering in only pollen from closely related varieties, then the law of heredity as applied to the animal kingdom would not hold good in the

vegetable family. My suggestion would be to follow both lines of work, inter-breeding and promiscuous breeding, if I may thus put it, but always have in mind the design of a given improvement.

Of late my one thought has been to select the most vigorous grower for the mother plant, for without health, vigor and a good constitution the finest new rose is a failure. I am thoroughly convinced by observation and experience that the mother plant has the most to do in giving health, vitality and constitution to the offspring; this being the case, we can see at a glance how important it is to select only the very strongest among the everblooming varieties to serve as the female parent. We should select the pollen from those varieties which have pronounced qualities in the way of color, stem, length of bud and fragrance: If these qualities are present in the male, you may hope that they will have an influence upon your crosses.

With the increased vigor possessed by many of the later productions in Tea and Hy, Tea roses, such as Betty, Pharisae, Killarney, Kate Moulton, and others of like vigor, it need not be many years before a race bred from such parents will give greatly increased vigor over present existing varieties. and with this increased strength of growth, great good will come to the grower.

The infusion of Hybrid Perpetual blood will also have a marked tendency to increase the vigor and growth of seedling roses, and by using the ever-bloomers for the seed bearer, freedom of bloom will in large measure be preserved; it ought not to be many years until the present non-flowering Hybrid Perpetual roses are superseded by a race equally as virile, but which will give continuous bloom. If we get vigor of growth with certainty of bud flowers on the ends of long straight stems, that will be the type that shall give us larger and finer flowers for our winter forcing as well as better varieties for our gardens.

I know that you will say that predictions of this sort are easy to make; but kindly indulge me a little; let us use any means to impress upon the mind of those just taking up this work, that constitution is the foundation upon which all effort must proceed.

A great number of skilled and practiced workmen are enthusiastically bending their best energies toward improving the rose and we are surely making a steady advance in the right direction under such men as the Dicksons, the Pauls, the Souperts, Pernet and others in France, and Peter Lambert and his colleagues in Germany together with Cook, Walsh and others in this country; we have a right to expect even better results than have yet been obtained. Even with the combined efforts put forth by the rosarians in this and other countries progress will appear slow to the impatient workers in our ranks, trifling advance will be noted, but better types and varieties will surely gladden our eyes and hearts for nature has been kind in the past both in bud-variation and by cross fertilization and the coming years will be no less fruitful than the past; we shall improve upon Malmaison, Marechal Niel, Catherine Mermet, Bride, Perle des Jardins, Kaiserin Augusta Victoria, American Beauty, Frau Karl

Druschki, Liberty and the two Cochetts, or at least she will reward us with varieties more readily amenable to our 20th century requirements, which are stringent in the extreme.

By all means let us study Mendel and his theory, note the deductions of De Vries, and gather all the information possible from whatever source it can be had, remembering that nature's working theorems are to be discovered only by the painstaking application of the knowledge at hand, and that no amount of speculative theory will take the place of intelligent persistent experiment "personally conducted."

Let no one think for a moment that good results may not be obtained by the simple direct crossing of two varieties of roses, for such is quite possible without inter-breeding. Richmond was obtained by using pollen from Liberty upon Lady Battersea, but it was the one valuable result out of a very large number of the same cross, so that we may say there is a chance of a good return, though it is not probable, from this procedure.

I have carefully avoided the use of any scientific or technical terms and have only tried to embody in this very imperfect paper my own ideas and to chronicle the results of my own observations.

Our gardens are sadly in need of roses that will grow and bloom as do most of the present standard varieties in England, on the Pacific Coast and in many of our Southern States, but here in the North, only a pitifully small number can be depended upon, and right here is a wide field for the hybridist to enter; a good reliable, ever-blooming garden rose will give pleasure and delight to millions of American citizens; it is to be hoped that many rose lovers may enter this sadly neglected field; my ideas on this line of the subject were given in a paper read before the S. A. F. at their annual meeting at St. Louis, 1905.

This line of work might have received a fine stimulus if the Trustees of the Carnegie fund had been empowered to set aside certain funds to be awarded for meritorious new garden roses—the field is not inviting to one who must earn a maintenance, but if a prize or a money consideration could be offered of sufficient size it would stimulate efforts in this direction.

In closing I wish to express the hope that I have not wearied you in the presentation of my thought on working towards an ideal in the production of new types of roses.

CLIMBING AND TRAILING ROSES IN THE HARDY ROSE GARDEN.

A paper read before the American Rose Society by M. H. Walsh.

The popularity of this class of roses is increasing yearly as their valuable qualities for garden decoration become known. It was in the year 1903 when Wichuraiana was first introduced into the United States. Shortly after the Crimson Rambler was also brought to this country. The Wichuraiana and Crimson Rambler are the two parent plants from the many varieties of rambling and trailing roses and these may properly be called Wichuraiana and Multiflora hybrids, a new race of hardy garden roses. Their vigor and constitution make them desirable as they prove hardy in the coldest localities. The freedom of growth, fine foliage,

and easy culture place them within reach of the amateur as well as the professional gardener. They adapt themselves to the varied conditions of soil and climate; of course, the better the soil the more attention received, the finer will be the growth and profusion of flowers. They grow in light sandy soil with less attention than most any other rose.

The various ways in which these plants may be grown as decorative plants in the garden are several. They may be trained in pyramid form on posts set in the ground about eight and one half feet high or in bush form. They can be grown as windbreaks on a trellis. They also make fine specimens when grown as standards about four feet high. They are being used largely at the present time for pergolas and archways and, when necessary, may be grown as ground roses trailing on the surface. They are admirably suited for covering rocks and stumps of trees.

When used for pergolas, the posts should be set about ten feet apart and eight and one half feet high. For quick effect three plants to the post will reach the top and partly cover over the first year.

Two plants usually are sufficient unless immediate effect is desired.

In 1903 there were few climbing roses which proved satisfactory, Queen of the Prairie and Baltimore Belle being the two varieties mostly called for. While these made rapid growth and gave fine effect, they were subject to the attacks of insects and unless sharply looked after shed their foliage and became an eyesore. The hybrid Wichuraiana and Multiflora are more desirable, being less liable to the attacks of insects, and they produce hundreds of blooms more to the plant than the old varieties of climbing roses.

The effect in the hardy rose garden produced by this new race of roses is marvelous and bewildering, almost beautiful beyond description, where fine specimens may be seen in the various colors, single and double flowers. This effect could not be attained until the advent of these roses. They are ornamental when out of flower, as the foliage is distinct and shiny; in many of the varieties some having the appearance of being varnished, as it were. Another most valuable consideration is the second crop of blooms produced by a few of the varieties in September, continuing until the frost sets in.

Planting. To obtain the best results when planting ramblers it is well to dig the hole two and one-half feet deep and about three feet wide, enriching the soil with decomposed barnyard manure. Plants five feet long set out produce flowers the first season. The young shoots should be tied occasionally as growth requires; this keeps the wind from swaying them about.

Where insects do attack these roses a slight dusting of hellebore is usually sufficient to stop their ravages. It is easily applied and no injurious results follow from its use, as is oftentimes the case when tobacco water or whale-oil solution are used, as many amateurs have found out to their sorrow.

The season of blooming. The earliest variety to bloom is Wedding Bells, semi-double, pink and white flowers; this is a seedling from Crimson Rambler. Next to flower is Debutante, soft

pink and double; the flowers are borne in large pinnacles. Sweetheart comes next, Carissima then follows. Dorothy Perkins, beautiful soft pink, flowers about the first of July, as do Wichuraiana, Crimson Rambler, and Lady Gay. Then follow La Fiamma, single red; Hiawatha, bright crimson, base of petals white; Minnehaha, large double, dark rose color; Paradise, single and a most vigorous grower, well adapted for parks and driveways and trellis work. Coquina is a delightful shade of porcelain pink, with the base of the petals yellow; flowers are from one inch and a quarter to an inch and a half in diameter. Delight is considered by some one of the very best of recent introductions. Its color is crimson with base of petals white; it has dark shiny foliage.

Mr. Jackson Dawson raised valuable and most desirable varieties—The Dawson, W. C. Egan, Farquhar and others. W. A. Manda of South Orange, New Jersey, has furnished such grand varieties as Manda's Triumph and Favorite; and others have added many valuable ones to the list. So we have a good list of varieties in wide range of color. It is a matter of choice as to color, some preferring one color and others another. In planting, however, varieties should be selected which harmonize and not clash with each other, for at this time the effect from an artistic point of view adds much to the beauty of the garden.

A few varieties bloom quite freely in September by pruning; cut back the shoots which have flowered in the early summer to within two inches of the main shoot and shorten the long shoots a few inches. Hiawatha, Debutante, and Delight treated as above will produce a nice lot of blooms.

Spring pruning. When the shoots are too crowded, cut out the old ones, leaving shoots of the previous season's growth to produce the blooms. The number can best be determined by the space it is desired to cover and the vigor of the variety.

This class of roses, owing to the hardiness and their adapting themselves to varying conditions of soil and climate, commend them to the consideration of the amateur.

New and meritorious varieties in white, porcelain pink, and yellow it is expected will shortly be ready for distribution. It is possible we may see perpetual blooming ramblers as free as the hybrid tea or monthly rose. Then indeed we shall have realized our highest expectations. The American raised hybrids give great satisfaction in Europe and the continent, and are marvels of beauty, when in bloom, which almost baffles description. There are great possibilities by improving existing varieties, and we hope this will continue until the highest degree of perfection is attained in all that constitutes a perfect hardy climbing or trailing rose in various colors and perpetual flowering kinds.

MOVEMENTS OF GARDENERS.

William Hogan has accepted a position with Mrs. Barns, Brushy Ridge, New Canaan, Conn.

William Angus has succeeded Jules Roeckens as gardener for A. M. Burbank, Newton, Mass. Mr. Roeckens has purchased and taken possession of a farm in Abington.

WHOLESOME CHESTNUTS.

In the rush of the next few days many things are liable to be overlooked, but on no account should it be forgotten that cleanliness is next to godliness, and that at Easter more than any other time every plant, flower, ribbon and dish should be spotlessly clean before being placed in view of prospective customers. The store also should conform in every particular to the ideals growing out of the promptings of the spirit of the occasion; in short, have everything bright and glowing, with yourself the brightest of all.

Although the time is short and every hour precious do not neglect to take precautions to harden off, at least slightly, everything you offer for sale. Just imagine the disappointment it will cause trusting customers if plants from a slight exposure become practically useless in a day or two after becoming their property, when with a little extra trouble on your part they would have been a source of pleasure for days, perhaps weeks, and the same customers satisfied and still trustful would come back again. With most made-up things it is much better to have them ready before Saturday than to have customers wait while they are arranged and besides the work will be better done in the absence of the hurry and excitement of that day.

Made-up baskets should not be arranged in masses and jumbles of glaring contrasts of form and color, but on the contrary with an eye to harmony evidencing an effort towards a pleasing conformity to refined taste. If, however, it becomes necessary to make use of some stiff plants in the making up of baskets or other receptacles it will be necessary to introduce something of more graceful habit to counteract the stiffness, always remembering that not the number but the quality and appropriateness as well as the arrangement, count for ultimate effect.

Of late years it has been noticed that a great many people buy other kinds of plants and flowers, especially for presentation to friends, in preference to lilies, therefore have in as good shape as possible everything available, and ready to lay your hands thereon at short notice.

When plants or flowers are ordered find out the customer's pleasure in regard to manner and time of delivery and conform thereto to the letter. Wrap the plants securely in clean attractive paper, pack all flowers in suitable boxes of a proper size; do not suggest that a customer carry a purchase, no matter how small. Have sufficient help in readiness to meet all possible demands.

A day or two before Saturday everything in the way of plants should be got together or placed where they will be conveniently reached and seen.

The store should not be packed full with plants and flowers, but the choicest should be displayed in a manner to compel the attention of customers when once inside more to each individual plant or vase of flowers than the creating of an impression by the effect of a general display. The windows, however, may with advantage be arranged in such a manner with plants and flowers as to produce a general effect.

A Model Establishment

The accompanying illustration shows the front windows and book-keeper's office in the new wholesale flower establishment of Welch Brothers, Boston, which was described at length in

these columns a few weeks ago. Visitors from all sections have expressed the sentiment that this place, so complete and modern in its every equipment, is a credit to the flower business. We think our readers who no-

tice this picture of one corner of the vast establishment will endorse the compliment. Many will recognize in the stately figure seen standing by Mr. Welch, the well-known ex-president of the S. A. F., M. H. Norton.

DON'T BE TEMPTED.

Every year during the month of March we experience a glut of a more or less long duration in the cut flower market. Many an otherwise reliable dealer has been tempted to reduce his rates to the retail buyer in consequence of the temporary low prices of the wholesale market. This condition of the market being only a few weeks before the high water mark of Easter values appears is a bad temptation to the weak-kneed and narrow-sighted retailer. The general public does not and cannot realize the condition of the wholesale market, but they will consider the florist who offers carnations on March 15 for 36 cents per dozen and asks for the same goods \$1.00 to \$1.50 two weeks later, as nothing short of a robber. Don't be tempted; the buying public will not resent an advance of 100 per cent., but rightfully mistrusts you if you advance 400 per cent. for two days. If you have more than you can sell or you are bound to buy out the wholesale house because the prices are low, make use of this time to be charitable and give your surplus to the hospitals and orphan asylums, etc., but preserve your credit with your customers by upholding on honest prices.

FR. DENZER.

HEARING ON EXPRESS RATES BEFORE THE INTERSTATE COMMERCE COMMISSION.

The hearing on the complaint made by Secretary Stewart of the S. A. F. last year against the increased transportation rates on cut flowers exacted by the United States Express Company finally came up before the Interstate Commerce Commission at Washington, on Friday, March 15, and continued two days. Attorney Frank Lyon appeared for the complainants and testimony was given by Frank L. Moore of Chatham, N. J., L. M. Noe of Madison, R. M. Schultz of Madison, L. B. Coddington of Murray Hill, F. H. Traendly, New York, A. Farenwald of Roslyn, Pa., A. J. Guttman, New York, and President W. J. Stewart of the S. A. F. Cost of special delivery service in New York city and reduced receipts because of the wagon express which has operated in competition with them for several years were given by the attorney for Platt's corporation as the reason for the high charges which, it was shown, are almost double those charged for similar service by other express companies. The attorneys have now been given thirty days in which to file briefs based on the testimony given and the decision will then be given by the Commission.

SIMPLE FAITH AND "SOUR" NEWS.

Our simple faith in this column being the exclusive source of information on some subjects to our Boston contemporary is, we are glad to see, properly appreciated; but why drag in cats and canaries? Aesop tells about a certain fox and some sour grapes—the rest you know. News is like grapes to some editors, sour if not obtainable while fresh.

The above oracular effusion which appears in the March 16 issue of our bumptious New York contemporary, under the caption of "The Week's News," acquires its principal value from the following note which appears lower down in the same column, which was cribbed, word for word, from the news column of HORTICULTURE of March 2, page 266:

"M. H. Norton has accepted a position representative for F. W. Kelsey of New York in eastern New England territory. Mr. Norton has a wide acquaintance among the proprietors and gardeners in the many large estates on the north and south shore and starts on his duties with excellent prospects."

Alas, for the waning reputation of that New York column as an "exclusive source of information." "Sourness" and mildew evidently have no terrors for some folks.

CARNATIONS.

(A paper read before the Detroit Florist Club by Fred Stahelen.)

Mr. Stahelen, after describing his houses built in 1903 and additions two years later, continued as follows:

My propagating bench is built of 1 ft. by 6 in. tamarack boards with three hot water pipes underneath. After whitewashing the inside of the bench it is filled 2 in. deep with fine cinders which are then covered with 3 in. more of coarse, clean sand levelled and well packed.

I try to select cuttings at the stage when they are about 1-2 in. long or more without any leaves, then cut as small an amount as possible off the base and still leave a nice clean surface. If plenty of room is at hand on propagating bench leave on all the leaves except perhaps the small lower ones. When cuttings are ready make a rut in the sand with a tableknife and insert your cuttings 3-4 in. apart in the row and the rows about 2 1-2 in. apart. Spray the cuttings every day until rooted and more often when much ventilation is given. The cuttings should never see bright sunlight until rooted and then they should be potted up as soon as possible. I always plant them in flats for labor-saving purposes and I believe this to be just as good as potting them up. The advantage of growing young carnations in flats over that in pots is (1) a saving of labor; (2) they are less apt to suffer from want of water, which is worthy of consideration during the spring rush of business; (3) about the last of April or beginning of May they can be placed outside where a water pipe is convenient. This outdoor treatment with cool nights brings strength and vigor to the young plants and makes them better fitted for the planting in the field. In case of frost a sheet of cotton is spread over them for protection.

The best way to remove plants from the box is to cut with a sharp knife both ways between the rows of plants, then hold the flat up on one side, give it a sharp downward tap upon a solid block, which will loosen the plants easily and they can be removed in good shape with all the soil clinging to the nice mass of roots which they always have. Such plants with roots spreading out in every direction are much more ready to take hold than pot-bound plants.

So far I have always planted out as early as possible, sometimes commencing the last of April when we still have hard frosts and I find the earliest out always make the best plants. They are planted 8 to 9 inches apart and in rows 30 in. apart to allow horse-cultivation. This should be done as soon as possible after every rain. Topping should never be overlooked to prevent the plants producing a lot of unnecessary buds, thereby wasting their strength. There should never be

CARNATION MAY.

This is a seedling raised by Baur & Smith, of Indianapolis, who send us the following notes in description of its various qualifications to trot in the winning class. Mr. Baur naively adds in postscript, "It has only two parents!"

"May is not a fancy exhibition prize winner and will not displace Enchantress in the fancy class. But it is a strictly first class commercial variety to grade with Lady Bountiful, Victory, Lawson, Winsor, etc., and will prove a highly profitable sort. Its

color is very pleasing, being deeper and more even than Enchantress. The bloom is also less crowded in the center, which allows it to unfold quickly and perfectly at all times. Never splits the calyx, and the stem is always strong. Comes into bloom early and is extremely free. Plant is strong and healthy and grows in height about the same as Lady Bountiful. Both parents were seedlings of our own. We have a nice stock of it, and expect to put it on the market next season."

more than 2 or 3 shoots topped off at one time; doing this often helps much to have plants in continuous bloom.

Lifting and planting into the houses should always be accomplished as early as possible. I have planted in August but would do it earlier if possible. By keeping plants well cultivated they can be taken up in almost any kind of weather although a dry time is best because the foliage is rather hard and not easily injured by wilting. I like to leave on a ball of soil about 3 in. in diameter which, when planted, helps to keep them erect and from wilting badly the first few days. The plants are sprayed once or twice a day according to weather, also kept well watered after the roots have taken hold. At this time it is necessary to keep the

ground well watered but still not too wet because the plants have not as yet taken a strong hold and the soil not being full of roots it is easily and quickly soured; thorough cultivation will do much to avoid this and therefore should be done often.

As soon as growth commences the shade on the houses should be removed, plenty of ventilation given, and the plants never allowed to suffer from want of water. After the plants are larger and beginning to bloom the ground being full of roots helps much to keep the soil sweet and it is not necessary to cultivate so often.

Fumigating and syringing should be well taken care of regularly, greenfly and spider kept out of sight; nothing causes so much annoyance and loss as a good crop of these pests.

CULTURE OF THE CARNATION.

(Paper read before the Morris Co. Gardeners' and Florists' Society, Mar. 13th, 1907, by Percy Herbert.)

I will assume that everyone who propagates his own plants has a suitable house in which to root the cuttings. I prefer a house facing north, such a house as can be built back of any three-quarter-span-roofed greenhouse which faces the south. You can either have one or two benches according to the width of your house. I prefer a little bottom heat, though it is not absolutely necessary. I would have my benches from 4 to 6 inches deep. I would take the best and sharpest sand, not too fine nor yet too coarse—just a nice medium. The very fine sand packs too close and if it is too coarse it does not pack enough; seems to have a kind of a spring to it and does not hold the cuttings tight enough, and also dries out too quickly. The sand should be from three to five inches deep according to the depth of bench. Pound it well with a brick to make it firm, then water thoroughly and the bench is ready for your cuttings. I prefer to select my cuttings for the following winter's bloom, from the end of December to the beginning of March. They can be taken earlier and later, too, but I consider the period mentioned best.

The stock plants should be well established in the benches, with plenty of flowering stems, and nice sturdy growths before propagating operations commence. I like to select my cuttings from the flowering shoots on healthy and vigorous plants, choosing short, stout, well-developed shoots, avoiding those too near the tops of the stems, still leaving a few shoots near the base for the next crop of flowers. In this manner you will get from six to a dozen cuttings from one plant which will give you ample for your own use and some over. Of course you can go further and take everything in sight, but the plants will suffer and you will ruin your chances for the next crop of flowers. I usually take cuttings by pulling them with the hand; I grasp the plant with the left hand, and with the thumb and finger of the right give a gentle upward pull to the cutting, and it will easily come away. Cuttings taken this way need but little trimming, and are ready to insert in the sand right away. I don't advocate the wholesale trimming of carnation cuttings, still, when a man has a considerable number to root some trimming is necessary. Sometimes we have to take shoots that are too long; it is not always convenient to take them just at the right time; then we have to trim them a little. It is best to do the trimming with a sharp knife, not strip the leaves off roughly as if you were husking corn, as that is bound to bruise the cutting and make it liable to decay in the sand. When it is necessary to cut the bottom of the cutting cut it just below a joint.

When putting the cuttings in the sand I use a lath as a guide for the rows. Lay the lath on the sand, hold in position with the left hand and then with a piece of hard wood shaped like a knife draw a furrow across the bench, in which then place

Spiraea Gladstone, large bushy plants, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Spiraea superba, 6 inch, 25c. to 35c. each.

Cineraria hybrida, 6 inch pots, all shades, 3.00, 4.00, 5.00 per dozen.

Hydrangea Otaksa, 6 and 7 inch pots, 50c., 75c., 1.00 each.

Crimson Rambler Roses, 6 inch pots, 3 ft. high and over, 1.00, 1.25, 1.50, 2.00 each.

Hyacinths, all shades, 4 inch pots, 12c.

Tourensol Tulips, 3 plants in a 4 inch pot, 12.00 per 100 pots: 1.80 per dozen.

Double Von Sion Daffodils, 3 plants in a 5 1/2-6 inch pot, 2.50 per dozen pots.

Araucaria excelsa, 6 inch pots, 6, 7 and 8 tiers, 1.00, 1.25, 1.50 each.

A. excelsa glauca, 6 inch pots, 5 and 6 tiers, 1.00, 1.25, 1.50 each.

A. compacta robusta, 7 inch pots, 30-35 inches high, very fine, 2.00 to 3.00 each.

Specimen glauca, 7 inch pots, 3.00 each.

Please mention if pots are wanted. Cash with order please. All goods must travel at purchaser's risk.

GODFREY ASCHMANN, 1012 Ontario Street, Philadelphia, Pa.
Wholesale Grower and Importer of Pot Plants.

EASTER PLANTS

An immense stock now ready at the well-known establishment of

GODFREY ASCHMANN, Philadelphia.

Azalea indica our specialty, three houses full, selected personally by myself on my annual business trip in Belgium last fall.

Mme. Van der Cruyssen, the best double pink azalea in existence. Have 3000 of them, all as round as an apple, just covered with buds. Other varieties as, Niobe, Bernard Andrea alba and Deutsche perle (double white), Empress of India, Prof. Woiters, Verveaneana (double variegated), Simon Mardner, and about eight more best varieties, price 75c., 1.00, 1.25, 1.50, 1.75, 2.00 each. Have a limited amount of 50c. and 60c. size, such as Apollo (dark red), Simon Mardner, etc., (no Van der Cruyssen).

Lilium multiflorum, 6 inch pots, were never so nice as this year. Price, 12c. per bud for plants with 4 buds or less; plants with 5 buds and above, 10c. per bud.

Araucaria excelsa, 6 inch pots, 6, 7 and 8 tiers, 1.00, 1.25, 1.50 each.

A. excelsa glauca, 6 inch pots, 5 and 6 tiers, 1.00, 1.25, 1.50 each.

A. compacta robusta, 7 inch pots, 30-35 inches high, very fine, 2.00 to 3.00 each.

Specimen glauca, 7 inch pots, 3.00 each.

your cuttings with the left hand, pressing it firm with the forefinger of the right, and so on till the row is finished. Then place the lath across the bench, next to the row just put in, press it down firmly and draw your furrow for the next row, and so on till the bench is filled. Always make sure that the cuttings are resting on the sand at the bottom of the furrow. If the sand is pressed firm at the top of the cuttings and not at the bottom they will be sure to go back on you.

There are a few things to remember in the management of the cutting bench, the temperature, moisture, airing and shading. The cuttings will root nicely in a temperature of 50 to 55 deg. with the sand a little warmer. In a house with a northern aspect, it is not a difficult matter to keep the temperature steady, but if the sun strikes your house during the day it will be sure to vary a little and will have to be kept down by airing. As to moisture, I should always keep the sand damp, not sodden, but a little on the wet side. Syringe the cuttings as often as the weather will permit, overhead. The cuttings must not be allowed to wilt at any time and if the sun strikes the house you will need to shade the bench. Some newspapers laid over the cuttings is as good as anything. The papers will need to be put on every time the sun hits the house until the cuttings will have rooted. Then it can be left off by degrees. The house will need to be ventilated a little when 60 degrees is reached. The paper will help to keep the air from the cuttings, as air will cause them to wilt as badly as sun. Some laths might be laid on the papers

to keep the air from moving them. The sand can be used for a second batch of cuttings providing no fungus has appeared during the first period. When the cuttings are well rooted, they should be taken out, potted into 2-inch lots, or put into flats. I prefer to pot them. It takes a little more time perhaps, but you will be more successful. Some growers prick them off into a bit of good soil on a bench and hold them that way till planting time.

Plants that are potted will need to be watched in case they become pot-bound. It is a big job if a man has a considerable number of plants to repot them all again. A very good plan is to knock them out of the pots and place them in flats with good soil worked around them. They grow finely that way and you are always sure of a nice ball of soil to each plant when planting time comes, and if you plant in the field, when lifting time comes, that same little ball of soil will stick to the plants, though all the rest fall away.

All the young stock either potted or in flats, should be kept in a nice cool house, well ventilated and given every attention and care in watering, shading, airing, etc. The shading can be done away with after they have taken to the soil. Keep a watch for green-fly, and get rid of it as soon as it appears. The plants will need to be pinched once to make them bushy. They will be all the better if removed into cold frames some little time before planting, or as soon as the weather permits. It will harden them up and make them good stocky plants, ready to plant in field or bench.

A PLANT MARKET FOR NEW YORK.

(Address before the N. Y. Florists' Club by John Birnie.)

It would be useless as well as tiresome to give in detail the efforts that have been made during the last 17 or 18 years by the plant growers who dispose of their produce in New York City to find a permanent market-place suitable for their purpose. Suffice it to say that those efforts have been unsuccessful, and at the present time they are absolutely without a place where they can legally sell plants at wholesale.

That such conditions should prevail in a city like New York is deplorable, and shows that the civic government is delinquent and careless regarding the needs of the masses, who are the actual plant lovers and plant buyers. The argument that the majority of the plant growers are not citizens of New York City is humbug. The eggs that every New Yorker consumes for his breakfast are not laid on Broadway, neither is the celery which decorates the dinner tables of the 400 grown on Fifth avenue. The contention that "it won't pay" is also groundless, for notwithstanding high ground rent and other drawbacks, the N. Y. M. F. Association paid a dividend of 25 per cent. a year ago. However, the fact remains that a plant market for New York City is a crying need, and the subject has been brought before the New York Florists' Club for the purpose of eliciting suggestions as to ways whereby the desired object may be attained.

It is a subject that is of vital importance to every one in any way connected with the business, be he grower or retailer, and should interest every man and woman who has the welfare of the masses of New York City at heart. The denizen of the top story tenement may forget to say his morning prayer, but he never forgets to water his window plant. This would suggest the idea that the introduction of plants into the homes of the masses might prove to be a more potent factor in their regeneration than the missionary with either hell-fire and brimstone or holy water.

The plant trade in New York City has reached enormous proportions, and represent great investments, and would grow to be still larger were adequate facilities provided for selling plants at wholesale. The perishable nature of our products makes shelter absolutely necessary. A place of considerable dimensions would also be required; at least 10,000 square feet of floor space could be utilized from Easter until July 1st. The fact that we need a plant market for only three months in the year has been the worst obstacle in the way of securing a market. But I am sure that given a well heated, lighted and ventilated building the plant business would grow to such proportions that we would have seasonable plants to sell all the year round, as is done in European cities, some of which are much smaller in population than New York.

About 17 years ago a body of growers organized and called themselves the "New York Market Florists' Association." Four years ago this organization was incorporated under the laws of the State of New York; it has

VASES OF PLANTS AS SUBSTITUTES FOR GRAVESTONES.

The Kramer Brothers' Foundry Company of Dayton, Ohio, whose advertisement appears in this issue are doing good work on behalf of horticulture and good taste in inducing people to use vases of growing plants in cemetery adornment in place of the motley collections of monuments and gravestones, which disfigure our burial grounds. Our illustration shows a

an office on Broadway, and has a paid attorney. The stock issued was \$5000, which has only partly been subscribed for. I am of opinion that if all growers would join this organization, as it is obviously their duty to do, subscribe for the stock not sold, and issue more, the more energetic taking office and helping those already in the harness to do the work, something could be accomplished which would be of benefit to all concerned. We are still looking for a Moses to lead us out of the land of Egypt. Will the New York Florists' Club prove to be that Moses? Or, must we stay in Egypt for forty years?

PUBLICATIONS RECEIVED.

Peter's Nursery Co., Knoxville, Tenn.—"Helps to a Beautiful Home." List of ornamental trees and shrubs, illustrated.

The popular Baby Pathfinder Railway Guide appears this month in a new dress of type, and other improvements such as the elimination of trains in paragraph and other abbreviated forms.

The publishers have had many requests from commercial men for the distances between stations, which it was impossible to add with the type formerly used without increasing the

cemetery view in which the advantages of the use of these ornamental vases are well shown. That the effect is good and that the suggestion is a sensible one, no person of taste will question. Keep it in mind when the spring business starts up, and consult Messrs. Kramer Bros. A full line of these vases will be exhibited at the S. A. F. convention in Philadelphia, next August.

size of the Guide, which everybody objected to. The "Baby" now contains the mileage between all stations in New England and is still as compact and concise as ever.

The Dahlia News, Vol. 1, Number 1, has been received. It is to be issued monthly by the New England Dahlia Society, Maurice Fuld, secretary, 5 Union street, Boston. An interesting article on Field Roots vs. Pot Roots vs. Green Plants is contributed by Wm. F. Turner. The list of members given shows that the new society starts off with a good support from the dahlia enthusiasts.

HENRY F. MICHELL COMPANY

1018 MARKET STREET

PHILADELPHIA, PA.

Seed Trade

The bright Spring weather of the past few days has started a boom in the retail seed trade that is a little late in its arrival, but yet greatly appreciated. To show how late the season is, it may be mentioned that no peas have yet been planted in Delaware or Maryland. Frequently early peas are planted in that part of the country in February. It is reported that some peas will be planted this week, but the ground is still wet and cold, and seed needs to be hardy and of strong vitality to germinate under such conditions. One of the largest planters—a canner—said his crop this year would be a month later, and late pea crops usually mean short ones in that section, either from the ravages of the pea louse, or the excessive heat and drouth.

Johnson Seed Co. and Walter P. Stokes report an excellent business; the volume done by the two firms if combined, would be considerably in excess of that done by the old firm of Johnson & Stokes last year up to March 15th. This must be very gratifying to the two principals, and shows what energy wisely directed will accomplish.

W. Altee Burpee & Co. report a large demand for their two new Bush Lima beans. It is quite safe to say that after they have been tried by the public the demand will be even greater.

The trade generally reports the sale of both peas and beans as rather light. In the vicinity of New York city this is mainly due to scarcity of farm labor to pick these crops. It is reported from a reliable source that a Long Island farmer was compelled to plow up a fine crop of two acres of peas last summer because he could not get labor to pick them. That farmer is going light on peas the coming season and many of his neighbors likewise.

If the season is favorable for tomatoes this year they will be more than abundant. Every canner and farmer who ever grew any is planning for an increased acreage and many new ones are joining the ranks. For two years tomatoes have been rather scarce and high in price, hence the rush to grow

them. With a large crop and low prices the coming season, many will lose their interest in them another year.

Word comes from California of a probable shortage in the onion seed crop this year. This is pretty early to "cry wolf," and it would be interesting to learn on what this opinion is based. Our California friends must be "getting the habit." It's easy to get it either way. Just depends on your point of view.

Crossman Bros. of Rochester, N. Y., have run a street through their trial grounds and are now selling building lots. They expect to dispose of \$50,000 worth of lots this year. H. B. Hathaway announces his early retirement from any official connection with this house. The sale of their land is expected to give them a liberal working capital, and they will once again be in excellent financial condition. They are an old and reliable house, and will have the best wishes and congratulations of the trade in general.

Bennett Galloway of Syracuse, N. Y., has settled with his creditors, and starts anew with ample financial backing. Good luck to him.

A change in the headquarters for the New York convention of the American Seed Trade Association has been made by the local committee from the Park Avenue Hotel to the Hotel Astor. This change is liable to result in some confusion to those not familiar with New York City hotels, and it may be well to call attention to the fact that there are three hotels with the name "Astor," or "Astoria," attached to them. There is the old Astor House, Broadway, Barclay and Vesey streets; the Hotel Astor, Broadway, 44th and 45th streets, or Long Acre square, and the Waldorf Astoria, 34th street and Fifth avenue. The Hotel Astor, on Long Acre square, is the one chosen as the headquarters. It is conducted exclusively on the European plan, with rooms \$2.00 per day and up. If any special arrangements are made for the convention they will be announced in due time by the committee having the matter in charge. It may be said that the change in

hotels is decidedly for the better, and the committee deserves the thanks of the association.

Both catalogue and counter trade have been unsatisfactory in and around New York and Philadelphia up to the present time, but this may, without injustice, be charged to the execrable weather of the past two weeks. While this is unsatisfactory, there is no good cause for discouragement as yet, and it is not a rash prediction to say that the close of this season will show an average well up with last.

Onion sets are becoming scarce, and quite an advance in prices has been scored in the past ten days. Considerably higher figures may yet be looked for.

Josiah Young, the seedsman, of Troy, N. Y., has moved into his new store on River street, just above H. W. Gardiner, thus bringing the two seedsmen close together. Mr. Young has bought the business, including the greenhouses and some eighteen or twenty acres of ground of Goodrich, "The Broadway Florist," of Troy. About half of his large, double store will be used for the sale of cut flowers and florists' supplies and the other for seeds, small hand implements, tools, etc. The second floor will be used for offices, and the other two stories for storage of supplies. When the improvements under way are completed, Mr. Young will have one of the handsomest seed stores in the State outside of New York City.

REVIEW OF NEW BOOKS.

An artistically illustrated handbook on "garden making" has been published by Mr. J. Cheal, of Lowfield, Crawley. Mr. Cheal has had the advantage of visiting many of the famous gardens and parks in Europe. He has toured in the East and admired some of the gardens of ancient days, whilst by way of contrast the most up-to-date horticultural developments of the United States and Canada have been explored. Mr. Cheal considers that the most popular section of gardens among all classes at the present day is the herbaceous. This is largely due to the great increase in varieties, size, colors and habit, the long flowering period, and the cheapness of the plants. As regards garden buildings, Mr. Cheal writes: "These should be constructed in conformity with the house, at any rate where they are in close proximity to it. Greater freedom of design may be adopted in other parts of the grounds in erecting summer houses, arbors, rose temples, bridges, boat houses, etc., where the rustic style may be more in harmony with the natural landscape or the sylvan scene. A water temple may some times be introduced with excellent effect, especially on an island, and a bridge across a stream, besides serving a useful purpose may add a pleasing feature. The planting of creepers over brick walls cannot be too warmly recommended, also rough Devonshire walls, covered with the numerous trailing plants suitable for the purpose." The writer has a word in favor of old English gardens, with "their smooth-shaven turf borders with a profusion of hardy and sweet-scented flowers, sun-dials, yew hedges, and recessed seat." The more formal treatment of the garden adjacent to the house, Mr. Cheal points out, has found increasing favor during the last few years.

W. H. ADSETT.

London, Eng.

A PROFITABLE ENTERPRISE.

The Lohman Seed Co., of Detroit, has started to fill orders for spraying trees of private estates against San Jose scale, etc. A compressed air tank on a one-horse truck, with a platform for the man who directs the nozzle, about 12 feet above the truck platform is used. A very convenient and inexpensive outfit which is worthy of imitation by any florist who looks after private parks or desires to increase his earning capacity.

... OUR ... CARNATION NOVELTIES — For 1907 —

Winsor, White Enchantress and Helen M. Gould

ONE way to judge carnations is to see them on the exhibition tables. A better and more convincing way is to see them growing; therefore we cordially invite all carnation growers to visit us and judge for themselves regarding the superiority of the above-named sorts.

Our carnation houses are at **Scarborough-on-Hudson**, (not Tarrytown). Friends who desire to visit us can take the N. Y. C. & H. R. R. R. from New York. Trains leave there every half hour. Scarborough is the first station north of Tarrytown. Our grounds adjoin the station, and the greenhouses are about five minutes' walk from the station.

We are growing **25,000 plants of Winsor** for cut flowers, alone, for the new York market this season, which shows the faith we have in it. This will also enable visitors to see it growing in quantity, and besides that, will give us enough plants to get a great abundance of fine, healthy cuttings without over-propagating. We have already booked a large quantity among the large growers, and anticipate for this variety the largest sale of any new carnation that has ever been distributed, as large growers who have seen it are enthusiastic in regard to its value. Those who have seen it have immediately placed large orders for it, so we recommend those who have not ordered to place order without delay, so as to insure early delivery.

For full description of these three valuable novelties, see our wholesale price list.

Wholesale Prices Rooted Cuttings Spring, 1907

WINSOR.—Soft silvery pink. The best color, best keeper, best shipper, best seller—best every way. \$12.00 per 100; \$100.00 per 1000.

WHITE ENCHANTRESS.—Has the large size, long stem, productive habit of Enchantress, but is pure white. \$12.00 per 100; \$100.00 per 1000.

HELEN M. GOULD.—A beautiful sport of Enchantress. Ground color lovely shade of silvery pink, with very fine pencilings of carmine, making an exceedingly exquisite combination. While on close observation this variety is variegated, the general effect is one beautiful tone of dark pink. Exceedingly valuable, because it combines the earliness, freedom, long stem and large size of Enchantress, giving another color possessing all the other desirable qualities of Enchantress. \$12 per 100; \$100 per 1000.

BEACON.—Orange-scarlet. A vigorous, healthy grower, of ideal habit. A profuse bloomer, with long stems. \$12.00 per 100; \$100.00 per 1000.

ARISTOCRAT.—Cerise-pink. Will be planted largely in place of Lawson. \$12.00 per 100; \$100.00 per 1000.

MELODY.—Daybreak sport of Lawson, about the same color as Enchantress, but much brighter, and does not fade like Enchantress. Also a much better keeper and shipper. Those who grow the Lawson varieties exclusively will find this very valuable and desirable, because it gives an improved Enchantress color, which is so popular, and at the same

time can be grown in the same house with the other Lawsons. An extra fine thing in every way and in great demand. A great addition to the Lawson class. \$10.00 per 100; \$75.00 per 1000.

ROSE PINK ENCHANTRESS.—A sport of Enchantress. Color, dark rose pink. \$7.00 per 100; \$60.00 per 1000.

WHITE PERFECTION.—A novelty of 1906, and a variety for which there is a great demand this season. A third larger than Lady Bountiful and a more perfect flower. \$6.00 per 100; \$50.00 per 1000.

VICTORY.—Scarlet. This is giving great satisfaction, being a free blooming, profitable scarlet. \$6.00 per 100; \$50.00 per 1000.

RED LAWSON.—A fine red. Our stock of this is superior to many stocks of Red Lawson that we have seen. \$4.00 per 100; \$30.00 per 1000.

VARIEGATED LAWSON.—The most productive of the variegated sorts. A favorite. Outblossoms Mrs. M. A. Patten. \$4.00 per 100; \$30.00 per 1000.

WHITE LAWSON.—An excellent white. \$4.00 per 100; \$30.00 per 1000.

LADY BOUNTIFUL.—Pure white. \$4.00 per 100; \$30.00 per 1000.

ENCHANTRESS.—\$3.00 per 100; \$25.00 per 1000.

MRS. M. A. PATTEN.—\$3.00 per 100; \$25.00 per 1000.

MRS. THOS. W. LAWSON.—\$3.00 per 100; \$20.00 per 1000.

F. R. PIERSON CO., Tarrytown-on-Hudson, New York

ARISTOCRAT NOTICE. We expect to have all orders for Aristocrat filled before the end of this month. We now have 100,000 cuttings in the sand for April delivery. As we have no more room in the propagating house we beg to offer unrooted cuttings of Aristocrat at \$60.00 per 1000 for immediate delivery. Aristocrat is a very rapid grower and you will find this is not too late for this variety to make good plants to sell from the field this fall.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—P. odigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

JOHN E. HAINES,

The Leading Scarlet

brilliant color, fine stem, the most productive ever introduced, blooms early until thrown out in July, no extra grass. All shoots make flowers. Watch the papers and see what growers say about it. None but well-rooted, healthy cuttings leave the place. Rooted cuttings ready Dec. 15, 1906. Price, \$6.00 per 100; \$50 per 1000.

JOHN E. HAINES, Bethlehem, Pa.

OBITUARY.

James Draper.

James Draper, secretary of the Worcester, Mass., park commission and one of the best known and highly respected park men and expert horticulturists in New England, died in his home in Bloomingdale, Mass., on March 12, aged 64 years. Mr. Draper was a member of the park board for 20 years and to him more than to any member of the present board is due the development of the city's magnificent system of parks and play grounds. He was one of the best-known park commissioners in New England, his prominence and solicitude for the Worcester parks bringing him into personal contact with the representatives of all the parks of this section of the country, and his advice was frequently sought by less expert commissioners in the development of their public play grounds. At the recent executive meeting of the Association of American Park Superintendents his name was presented for honorary membership.

Mr. Draper was also well known as a horticulturist and agriculturist. For nearly a quarter of a century he acted as judge of fruits at the annual fairs of the Worcester Agricultural Society. He was one of the originators and the first president of the Massachusetts Fruit Growers' Association, and he was master of the Massachusetts State grange when it was organized in 1872, and later he was elected president of the national grange. He was for many years a trustee of the Massachusetts Agricultural College at Amherst.

Other Deaths.

Daniel B. Stow, father of Charles B. Stow, florist, of Kingston, N. Y., died on March 4 at his home in Kingston.

Patrick Daly, gardener for Mrs. Henry P. Quincy, died on March 15 at

his home in Dedham, Mass. He was born in County Westmeath, Ireland, April 16, 1833, came to this country when a young man and has worked for the Quincy family for thirty-five years.

BUSINESS CHANGES.

H. S. Morton succeeds Otto J. Bach at the Wisner greenhouses, Rochford, Ill.

Foster Floral Co. will be located at 612 Olive street, St. Louis, Mo., after April 1.

LOSSES BY HAIL.

George Corbett, Henry Corbett, Joseph Sinfoot and Walter J. Gray of College Hill, Ohio, and Mrs. E. H. Martin of Shelbyville, Indiana, have reported losses by a hail storm on the 12th inst. Their glass was insured in the F. H. A.

JOHN G. ESLER, Secy.

NEWS NOTES.

The seventh lecture of the season before the American Institute of the City of New York was given by George T. Powell on March 20; subject, The Culture of Small Fruits.

The New England Nurseries has been incorporated under the laws of the State of Massachusetts, and has purchased the entire real and personal property formerly owned and operated by the Shady Hill Nursery Company of Bedford and Boston. Mr. Theodore J. Smith, of the W. & T. Smith Co., Geneva, N. Y., becomes president of the new corporation. Mr. Alfred E. Robinson, who was for fourteen years with W. & T. Smith Co., and who for the past four years has been manager for the Bay State Nurseries, North Abington, Mass., becomes treasurer and manager.

PERSONAL.

Philip Breitmeyer, of Detroit, has been visiting Pittsburg, Washington, Philadelphia and New York.

W. H. Wyman of the Bay State Nurseries, North Abington, Mass., has just returned from his European trip.

J. H. McHutchison of McHutchison & Co., New York, sailed for Europe on March 21, per S. S. Amerika, on a business trip.

Visitors in Detroit: J. Marks, representing A. L. Randall & Co., of Chicago; B. Eschner, of Philadelphia, and two trainloads of Dutchmen.

Visitors in Boston: George F. Strack, Summit, N. J.; Louis Dupuy, Whitestone, N. Y.; C. B. Weathered, New York; S. J. Reuter, Westerly, R. I.

Prof. A. F. Burgess, who resigned as chief inspector of the department of nurseries and orchards in the Ohio agricultural department, has entered upon his duties in the Massachusetts State department for the suppression of gypsy and brown-tail moths.

F. H. Ballou of Newark, Ohio, who was recently appointed State inspector of orchards and nurseries to take the place of A. F. Burgess, has decided not to accept the position, and C. W. Mally of Texas, has been selected in his stead. Mr. Mally has until recently been employed by the British Government in South Africa. The salary is \$1,400 per year.

HORTICULTURE:

Discontinue Mme. Sallerol ad. as we are all sold out.

Yours respectfully,
HAMMERSCHMIDT & CLARK.

News Notes

The Laible Floral Co. is the name of a new establishment in Norwalk, O.

A. F. Byxbee of Norwalk, Conn., has opened a retail store at 4 Wall street.

C. L. Powell, South Bend, Ind., has opened a salesroom on the north side.

Evans Seed Co., West Branch, Mich., on March 5. Loss, \$10,000; insurance, partial.

E. H. Bears & Son, of Reading, Pa., have opened a branch office at 14 S. Sixth street.

Herbert Greensmith has resigned his position with the Black Hall Greenhouses, Black Hall, Conn.

C. H. Chapin has taken the greenhouses of J. W. Perry, El Reno, Okla., and will make many improvements.

Hans Madsen of Springfield, Mass., has disposed of his greenhouse and will return to his fatherland, Denmark.

C. D. Mills, Jacksonville, Fla., has opened his new greenhouse at Riverside, the growing residential section of the city.

Miss Mayme Mooney and Miss Margaret Weir have opened a retail flower store on N. Franklin street, Wilkesbarre, Pa.

F. E. Bouton of Bridgeport, Ct., has opened a retail store at 48 Fairfield avenue. The store has been recently handsomely decorated.

The Conference on Rural Progress in Newport, R. I., will be held on March 26, instead of March 16, as reported in our last issue.

The Bemb Floral Co., Detroit, is getting up interesting novelties for fern dishes, hanging baskets, etc., made of dried grasses, etc., and they find a ready sale for them.

Gust. H. Taepke, of Detroit, has acquired by purchase the lot of land on Elmwood avenue where he first started to grow posies, and will remodel those greenhouses during the coming summer.

The Newton Floral Co. of Norfolk, Va., have secured the contract for the landscape gardening around the Illinois State Building at the Jamestown Exposition. A hedge of California privet will surround the grounds.

"MARKET"**Things are humming once more in the vicinity of
13th and Filbert Sts. Messrs. Berger Bros. are now
comfortably established in their new quarters, number**1305**and doing the biggest business in their history. Visi-
tors welcome. Their motto:**"Good service and a square deal all round."****BERGER BROS.,** Wholesale Florists
1305 Filbert Street, **PHILADELPHIA****CUT FLOWER MARKET REPORTS**

BOSTON Easter topics are now up-
permost in the minds of
the flower people and it
is not likely that there will be much
change in market conditions during
the week that now intervenes between
us and the great floral holiday. The
tension that has prevailed on Ameri-
can Beauty and some other roses has
come to an end and the receipts are
increasing daily. Other flowers are in
good supply—violets and carnations
somewhat reluctant to move. The lily
situation is a source of solicitude
generally, it being apparent that there
will be no over supply and possibly
a famine of good blooms

Monday opened up with
disagreeable weather,
which continued till
Thursday, and stock accumulated fast,
but beginning with Thursday, things
looked bright for a good balance of
week's business, and stock began to
move at a lively pace. Carnations,
lilies, roses and bulbous stock being
very plentiful, a good portion of the
three days' surplus was sold at good
prices, considering the amount on
hand. White carnations were in
heavy demand for St. Patrick's day,
and prices held firm. On Monday, the
18th, the market brightened up con-
siderable. Violet, carnations and
other stock were well in demand, and
the outlook for a good week's busi-
ness is excellent.

The trade are now on
COLUMBUS the jump getting
everything ready for
a great Easter business. We are in
fine shape as regards flowering plants,
as compared with a year ago when
there were practically no good plants
in the city. The sunny weather in-
sures all ample quantity of roses, car-
nations and other stock; so we all
feel that conditions are very favorable
for a great business. It is too early
at this writing to say very much about
Easter prices which will go into
effect March 26. From present ap-

pearances we will be able to keep
them low enough, to insure a great
volume of business. Lilies will be the
short item here; the disease has cut
into them badly; I should say at least
forty per cent. Harrisiiis have done
the best.

A review of the local
DETROIT trade finds every florist
progressive, with stock
on the scarcity list except violets and
bulbous material. The outlook for the
Easter supply is not changed mate-
rially. Lilies will be plentiful, but
roses and carnations not sufficient.
Trade in all kinds of potted plants is
also very brisk, with a shortage in
5 inch and 6 inch Boston ferns.

Favorable weather
INDIANAPOLIS the past week
brought good cut
flower and plant trade which made
up in great part for slowness the
previous week. There is still a scarcity
of good Beauties; other roses still
maintain the usual season's standard
of quality. Abundance of stock in all
lines is to be had, the quality of which
could hardly be improved upon. While
Easter is a little early this year, the
growers all seem to be prepared for
it. It is evident that the lily supply
will not be any too heavy. Green
goods are in strong demand, compared
with the supply, Easter plants look
promising with all the growers.

Receipts of all stand-
NEW YORK and varieties are
growing daily in size
and also show a gratifying improve-
ment in quality. American Beauty
roses have turned the corner with a
rush. Considering their extreme scar-
city up to one week ago the overturn
seems almost incredible and, at the
present rate of increase, the chances
are excellent for a bountiful supply of
Beauties at reasonable figures. Violets
are at present the most dejected item
on the list. The street fakirs take by
far the greater part of the stock re-
ceived. The late spring combined

with the early date of Easter assures
a supply of good violets for that oc-
casion such as has rarely, if ever,
been available. As to their disposal
the weather on Easter morning will
have something to say.

Beauties are more
PHILADELPHIA plentiful and of
slightly better
quality. Other roses are in abundant
supply and of generally excellent qual-
ity, with the exception of Killarney,
which is a little off color. Prices are
easier. Prices on carnations are low,
although fairly steady. The quality is
excellent and the supply all the mar-
ket will absorb. The outlook for
Easter lilies is that good prices will
be realized for choice stock from now
on. Much of the product is short
stemmed this year. Violets, lily of
the valley, tulips, mignonette, lilac
and other standard items are plentiful
and good, but without any feature of
special interest. Easter plant buying
is now proceeding briskly. The wide-
awake buyers believe in engaging
their supplies well ahead.

There has been no
WASHINGTON noticeable change
in the condition
of the market, owing to the bright days
of the past week. Flowers are still
superabundant, and there is every in-
dication that they will remain so un-
til after Easter, which, it is hoped,
will relieve the market of much of its
surplus. Saint Patrick's Day was
ideally beautiful, and the usual amount
of novelties were shown on the retail
counter. Azaleas, bulbous stock and
lilacs are still plentiful and move
slowly. Some of the retailers have
been to Philadelphia this week to con-
tract for Easter goods.

Steel Return Tubular BOILERS

STEAM WATER

What F. R. Pierson says:

JOHNSTON HEATING CO.,
New York City.

Gentlemen:—The internally fired steel boilers which you installed for us last fall are giving us great satisfaction. They heat very quickly and are very economical. We are exceedingly well pleased with them and they have more than met our expectations.—Very truly yours,

F. R. PIERSON CO.

Johnston Heating Co.

THE HOLLY CASTLE CIRCULATOR

No long arguments, involved theories or bewildering figures needed to demonstrate its merits.

IT WORKS

It **makes** the Boiler Work.

It **makes** the Water Circulate.

It has been installed in many large establishments and is giving full satisfaction. Write to Robert Simpson, Clifton, N. J., Julius Roehrs Co., Rutherford, N. J., J. N. May, Summit, N. J., F. R. Pierson Co., Scarborough, N. Y., Joseph Fuller, Leominster, Mass., Perennial Gardens Co., Toledo, O., or Christ. Winterich, Defiance, O. The Circulator is working in each of these establishments.

We are now prepared to contract for installing our new

STEEL PLATE BOILER

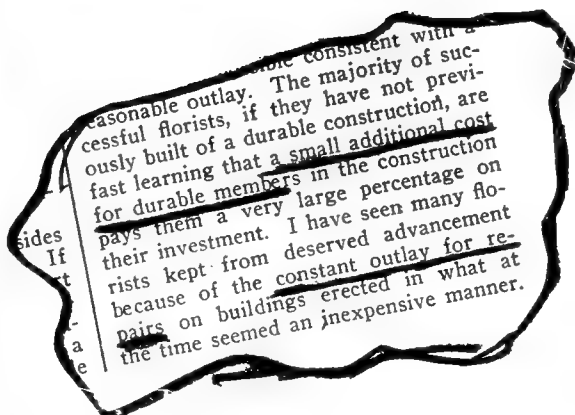

built especially for hot water greenhouse heating, also piping and fitting according to most approved methods, in economical manner and with satisfaction guaranteed. Write to us for particulars and testimonials from those who have used this boiler during the past season.

THE CAST IRON BOILER FOR GREENHOUSE HEATING IS DOOMED

HOLLY CASTLE COMPANY
HEATING ENGINEERS

170 Summer Street, Boston

THE VITAL POINT

Clipping from "Florist Review."

So many florists lose sight of the point that it's not what a house costs now—but the tremendous reduction in future repair costs and almost unlimited life of the Iron Frame Construction that counts. A construction that is absolutely self sustaining, and in no way depends on the endurance of any wooden members. When any wooden part does decay, it weakens only that immediate spot and affects no other part of the house. Repairs are an easy matter.

Lord & Burnham Co.

Greenhouse Designers and Manufacturers.

NEW YORK OFFICES

1133 Broadway, Corner 26th Street.

BOSTON BRANCH: 819 Tremont Building.

PHILADELPHIA BRANCH: 1235 Filbert Street

Get firm hold of that phrase—"constant outlay for repairs." It means the difference between the long headed man and the short sighted one. Send for Iron Frame Circular.

EVERYTHING that we use in our houses is just the best to be obtained—not only the best construction but the best constructive materials. U-Bar greenhouses are the best greenhouses built because you get the high water mark

in materials—you have a house freer from repairs, and giving to the plants the greatest possible light—no houses are as light by a third. Send for catalogue.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise, for the present prompt delivery on orders received within a short time at least.

If you have not already purchased a stock of this, you should lose no time doing so. We are going to sell more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is usually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes on Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but if you want the winner, plant Winsor.

We not only have a good thing in Winsor, but we are delivering good stock. As a sample of the testimonials that we are receiving, see this space in last issue. We are trying to give 110 cents on the dollar, and guarantee to please everybody with the stock sent out, or we will not ask you to pay for it. We have still to receive our first complaint, and we have shipped between one and two hundred thousand cuttings to date.

STRONG ROOTED CUTTINGS, February delivery, \$12.00 per 100, \$100.00 per 1,000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Lawson. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

Save Your Split Carnations

The BAUR CLIP and PLIER will do it in a Businesslike manner at a minimum of time and expense. Inexpensive, Instantaneous, Applied and Practically Invisible. The clips are made of galvanized wire and are colored green just the color of the calyx and can hardly be detected.

Plants with Beautiful Foliage

How delightful it is sometimes to turn from the brilliant yet sometimes garish color display in the flower garden made by masses of begonias, geraniums, calceolarias or other summer flowers and to rest the eye on the cool grey leafage of plants that are valuable on account of their foliage alone. Such a bed as this is shown in the accom-

ppanying illustration. On a hot scorching day in summer time flowers of rich and gaudy coloring are apt to pall and one turns with relief to the garden of sub-tropical foliage plants or, in a smaller garden, to the small bed that is filled with the soft greys and cool greens of leaf alone. In a partially shaded spot a mass of color against a background of shrubs is in perfect harmony and delights the eye but in an open sunny spot the colors lose their brilliancy and distract rather than soothe, while in a similar spot a bed planted as shown in the illustration would have exactly the opposite effect. In planting a bed of this sort the aim should be to fill it chiefly with plants whose leaves are of quiet coloring, although it is made more effective perhaps by the inclusion of a few plants of richer leaf tones which serve the purpose of showing the others to the best advantage. Among plants suitable for such a bed are *Cineraria maritima*, *Cerastium tomentosum*, *antennaria*, *Stachys lanata*, *alternanthera*, lavender and rosemary. Some of the

dark-red leaved coleus, the variegated abutilon and geranium, may be used to impart a little brighter color. Even the purple-flowered *Verbena venosa* and heliotrope may be used, for their soft tints associate well with the leafage of the plants above named.

A beautiful half-hardy silvery-leaved conifer, *Pinus canariensis*, was used last year

in beds filled with ornamental foliage plants in the Royal Gardens, Kew, and produced an excellent effect. The final appearance of the bed will depend a good deal upon the way in which it is planted. If the plants are dotted about here and there in twos and threes then the effect will be paltry and unsatisfactory. If, however, they are arranged in carefully disposed groups, as clearly shown in the photograph, then the result will be all that can be desired—masses of soft coloring, distinct in themselves, yet forming part of a harmonious whole. Most of these plants bear clipping well and, while they certainly must not be clipped to such an extent as to give the bed a formal appearance, a little cutting back must be done carefully now and then so as to prevent the stronger growing plants overrunning the weaker.

Harry H. Thomas

A New Race of Hibiscus

Some thirty years ago Thomas Meehan predicted that if a cross could be made between our native mallows, and the tropical hibiscus, that would combine the hardiness of one with the gorgeous blooms of the other, the result would be a great perennial achievement. Many have made attempts to get such a result, and yet it has only been a reality for the past three years.

Ernest Hemming, employed by Thomas Meehan & Sons, Inc., started about eight years ago to experiment on the proposition. He selected good, strong plants of our native hibiscus and the tropical one—*coccinea*—and worked on them for four years. At the close of the fourth year his labors were rewarded with a new type that produced blooms much larger than the parent plants and of more vigorous habit of growth. It was a result above expectations. A member of the Waterer firm (the famous English horticulturists) on seeing this new race of plants, pronounced it to be the most notable achievement for many decades.

Their growth is most luxuriant, it being not unusual

for them to grow eight and nine feet high. The foliage varies from a finely divided leaf to a broad type resembling the common moscheutos. The flowers measure from six to eight inches in diameter, and are obtainable in almost any shade from a pure white with a red eye, to a deep rich crimson.

These new plants will be invaluable for perennial border planting, in shrubbery borders or in beds by themselves.

The original plants from which the stock has been produced have been standing on the grounds for four years, proving conclusively that this new race is perfectly hardy. An exhibition of them is planned for the coming autumn at Jamestown, Va.

Warren Chandler

Forcing Cucumbers

The cultivation of cucumbers under glass has increased to quite an extent during the past decade. It was formerly confined very largely to the East, but of recent years has developed largely in other sections. Even in the older sections noted for market gardening under glass the increase in the number of houses during the last five years is quite marked.

Many gardeners confine themselves to growing cucumbers, but in the large lettuce houses in the vicinity of Boston cucumbers constitute only a spring crop, three crops of lettuce being grown first. Those who have made a specialty of growing cucumbers under glass have as a rule been successful financially, and many of them have been able to increase their greenhouse area to quite an extent. There are many more forced cucumbers used at the present time than formerly, therefore, the increase in their production has not seriously affected the price.

In general cucumber growers have not developed that degree of skill in handling their crops that lettuce growers and various types of florists have. Cucumber growers are more isolated, pay little or no attention to co-operation, and do not have to contend with much competition. Moreover, most of the men who have gone into cucumber growing have had little or no experience in market gardening or floriculture. Florists and other types of greenhouse men meet with more competition; therefore they are better organized, and co-operate to a certain extent. It is of the greatest value to anyone growing outdoor crops to have had experience in a greenhouse, inasmuch as those who have had such experience are much better qualified to carry on intensive agriculture out-of-doors. On the other hand, it is a decided drawback to success for a gardener to have had experience in growing only one kind of produce. This is a failing common to many cucumber growers. Some experience in general greenhouse work would naturally help in growing any special crop.

Every florist who is entitled to the name knows that it is impossible to grow good produce under glass without paying due regard to weather conditions, but cucumber growers as a whole ignore these conditions and attempt to grow their crops without the slightest regard as to whether cloudiness or sunshine prevails. They maintain the same temperatures during a series of cloudy days as during bright, sunshiny ones, a practice which would immediately prove fatal to other crops. By completely ignoring these simple, fundamental rules the plants often become subject to the most peculiar functional disorders, and it is not surprising that saprophytic and parasitic organisms often obtain a foothold. Many of these troubles are wholly unnecessary, and if proper attention were given to the limitations of the plant and its requirements they would be unheard of. The long period of cloudy weather which has prevailed during the past few months has served to test the skill of cucumber growers, and some of the peculiar disorders which have been common would not have been present if proper conditions had been maintained in the house.

TYPES OF GREENHOUSES BEST SUITED TO GREENHOUSE CUCUMBER CULTURE

Most cucumber houses are narrow compared with lettuce houses, and are generally 18 to 25 feet in width and 100 to 200 feet long. Such houses are usually provided with benches containing soil to a depth of about one foot. In a house of this description four or more rows of cucumbers are planted lengthwise of the house,

but it is a question whether the yield of the middle rows, which are more or less shaded, is sufficient to pay for planting them, especially when the outer rows are trained high and shade the inner ones. Cucumbers are also occasionally grown in the regular 2-3 span lettuce house, which is usually about 40 feet wide. In such houses the plants are grown in solid beds and are trained to either vertical or slanting trellises. A house 40 feet wide is the best for general purposes, and the writer considers it better than the narrow style of house for cucumbers.

From a large amount of data which the writer has obtained relative to the cost of various types of greenhouses per linear foot, it would appear that a house 40 feet wide and 300 feet long can be constructed proportionately cheaper than one 18 feet wide and 100 feet long. Moreover, a large house is easier to run, since it has more air space, and is less subject to abrupt changes in temperature, etc.

Since cucumbers require a great deal of light—much more, in fact, than they are able to secure during the winter months for their best development—it is essential that a greenhouse be constructed with the least possible amount of material which obstructs light. The older type of house was built entirely of small glass, and many cucumber houses at the present day are of this nature; consequently they are not as well lighted as they should be. The present tendency in greenhouse construction is toward larger glass and frames built to obstruct less light, and some of the best market-garden houses are now provided with glass 20 x 30 inches. Glass 24 x 24 inches is occasionally used, but with this larger glass it is necessary to have the frames more stiffly purlined. In such houses there is even less breakage than in a house poorly supported and built of the ordinary sized glass. Some commercial growers put the sash-bar 24 inches apart, and use 16 x 24 glass, running it lengthwise of the house, since there are fewer sash-bars employed in running it lengthwise. This affords much better light, which during the short winter months is a great advantage in cucumber growing.

TYPES OF CUCUMBERS GROWN

There are generally two varieties of cucumbers used in forcing; the White Spine, a standard variety; and what is known as the Hybrid, a cross between the English Telegraph and the White Spine. This hybrid type is more like the White Spine than the Telegraph, and is a slightly longer, darker colored and less spiny cucumber than the typical White Spine. Its dark green color makes it suitable for some markets. Other varieties are sometimes used, such as the Giant Pera, and occasionally Russian and Japanese varieties, but these have a limited commercial value.

SOILS AND FERTILIZERS

The best soil for cucumbers is one of a light nature, which may be obtained by mixing one-third horse manure, one-third decomposed loam and one-third sod. This soil may be used repeatedly by the addition of horse manure and it is not necessary to apply anything in the line of commercial fertilizers, although some growers use wood ashes, bone meal and occasionally nitrate of soda. The amateur grower, however, should be cautious in his use of commercial fertilizers in greenhouse work of any sort, since more trouble than benefit usually results from their use; in fact, a large percentage of the troubles to which greenhouse cucumbers are subject may be traced directly to the injudicious use of fertilizers and manures, and serious troubles have been caused by the

application of hen manure and liquid manure, nitrate of soda, etc. Little is known about the best commercial fertilizers for cucumbers, and their use should be restricted as a rule to expert growers. In case they are used, advice should be sought from reliable firms and specialists. Cucumbers are particularly sensitive to certain fertilizer elements, and when these elements are present in a soil to a certain degree, root absorption is prevented and wilting and curling of the leaves and other malformations are likely to result.

G. E. Stone

Amherst, Mass.

(The next article will treat on culture, diseases, etc.)

Some Features of the Sim Plant at Cliftondale

The remark was recently made by a prominent Boston sweet pea grower, that so far as he knew, there was only one party in either Europe or America who made a business of bringing out a race of sweet peas distinctively in the forcing class, and that was Zvolanek of New Jersey. W. C. Ward of Wollaston, Mass., has made a comparative test of a number of the earliest types of the Blanche Ferry variety, the present season, including Zvolanek's Christmas. Wm. Sim of Cliftondale, Mass., grows only Christmas, with one exception, and the possibilities of this race, under forced culture, as brought out by him are well demonstrated at his place.

Seed of the Blanche Ferry variety were planted in one of the violet houses late in October, in soil prepared for the successive crops of violets and sweet peas. The rows of the latter follow the line of posts supporting the roof, a space a foot wide having been left for that purpose when the violets were planted. Violet temperature was maintained until after February first, when the peas began to show flower, and the temperature was allowed to run up. A little later the violet plants next to the pea line on either side were dug up. Under the influence of increased heat and light, buds and flowers multiplied rapidly, the flowers coming very fine in size and color with from two to five blossoms on long stiff stems. The house is 360 feet long. The rows, three in number, run lengthwise. At the present time, March first, the peas are well started in flowering and there is not a weak or thin place to be seen in these far-reaching lines, but the same stocky, thrifty vine-habit and heavy flowering qualities are evenly manifested up and down the entire lengths. Including the production of two superb rows of Mont Blanc, which have received contemporaneous treatment and complete the capacity of the house, a cut of eight thousand blooms in one day has been made, with a reasonable possibility of four or five times that number by Easter. Careful attention is given to tying and supporting the vines. The row alignment is nearly perfect with no barren vine-growth and the whole appearance is that of a house well on its way to a record, in the annals of sweet pea forcing.

In another violet house are various colors of Christmas planted about two weeks later which have received similar treatment. The rows are four feet apart and run across the house. The dwarf, stocky vine-habit and early flowering qualities of the pink and white are manifested in these colors. They throw a single stalk and branch from that, instead of suckering, which is con-

sidered a distinctive feature of the forcing class. The red, light pink, blue and lavender are good in color, but the style of the flower is not of the desired nature. A sweet pea, in order to be right, should open its outer petals in such a way that the back shall have a broad, flat aspect. Now and then there is one among the blues, which does this, but the general tendency is to curl the petals inward. When the desired flower habit shall have been established, the range of color possible to this race of sweet peas evidently will be as wide as is that of the field grown. As the floriferousness of Blanche Ferry and Mont Blanc is approximated in these other varieties, the problem for the grower of the future will be to so forecast the market that time, effort and space will not be wasted in growing colors that will not sell. It is probable that the larger part of the production of this house will be disposed of at comparative advantage and altogether it seems that with successful growers sweet peas are all right for a spring crop. But Mr. Sim, like Mr. Ward, is of the opinion that a straight house of peas for the entire season is a doubtful proposition.

Nearly 50,000 Comet tomato plants are grown and fruited annually at this establishment, with a crop of nearly one hundred tons a past achievement and a future probability. Twenty thousand are fruited under glass, the seed being sown the first of January. From the seed bed they are pricked out into flats and then successively transplanted into 2 1-2-inch, 4-inch pots and the bench, where they are to be grown. Work of removing the violet plants begins immediately after Easter, and setting out the tomato plants follows closely.

There are no elevations for benches or depressions for walks in any of the Sim houses, the beds and walks during the violet season being marked off by narrow strips of boards set edgewise in the ground. These are taken up and the tomato plants placed from fifteen to eighteen inches apart in rows that run across the house with only one walk running lengthwise through the centre. The rows alternate eighteen inches and twenty-four inches apart. No additional fertilizing material is placed under the tomato plants, as a sufficient quantity was incorporated for both crops at the beginning of the season but wells have been driven, a steam pump set up, tanks built and pipes laid for the purpose of leading a supply of liquid manure to all parts of the range, and the tomato plants are fed later on from this source.

Seed for the field crop is sown about the middle of February and the plants are also grown in pots. The last of May these are placed two feet apart, in rows that are 3 feet apart, in order to allow for horse cultivation, but they are trained to stakes and trimmed of laterals the same as the inside ones.

It is said that the products of the Sim plant create a stir in all the markets they enter and this is hardly to be wondered at. Two acres of single violets under glass followed by the same area of tomato and cucumbers, with an intermediate crop of sweet peas, the average daily cut of which would be considered immense for a field grown crop, supplemented by twenty-five thousand well-grown, heavily fruited tomato plants in the open field constitute a supply in each several line, which would be likely to create an impression.

Frightening
the customer

We read in the Meriden (Conn.) Record that the florists of that city report that the Easter flowers will be unusually expensive this year. The florists responsible for this statement in Meriden as well as the florists who circulate similar stories in other cities must be very short-sighted people. We often wonder what they expect to gain by frightening the public away from the Easter flower trade. Other lines of business take just the opposite course in dealing with the public and

never weary of telling them of bargains, mark-downs, and favorable prices generally on the goods they wish to dispose of. The florist trade stands alone in its apparent presumption that scare heads are a help to prosperity.

Better publicity
methods needed

Anyone who has ever had occasion to report for publication the prize awards and other items of general interest in connection with flower shows well knows the difficulties encountered in the task. Rarely do we find a well-equipped intelligent plan of recording and manifolding the judges' reports such as is in operation at exhibitions in other lines and it is not an infrequent occurrence that the only copy of this information, so important in its bearing on the success of the affair and the personal interests of the prize-winners, is locked up or otherwise inaccessible until its custodian can be found. The obvious need is more clerical help and a modern equipment for quick and accurate news dissemination. Prompt judging, prompt recording and prompt announcing will go far toward making a show financially successful. And, we might add, a number of well-informed guides or attendants to direct visitors to objects of curiosity or interest and to answer inquiries would be another effective step in the same direction.

Are you
ready?

With the passing of Easter comes an abrupt change of conditions in the daily activities of many of our readers. Easter crops and prospects no longer concern them, winter has gone, spring is here. Plant houses are empty, violet houses soon will be; even the rose houses have but a few weeks left until overhauling will be in order. April will be a busy month for the retail florist with weddings and receptions, and it is not too soon to consider preparations for Memorial Day business. Whatever your spring rush may embrace—decorating, replanting, propagating, rebuilding, gardening, seed-selling or tree-selling—foresight and "allreadiness" will do much to lighten the labor and insure success. If you require supplies, implements, stock or equipment of any kind our advertising columns await your interested perusal. Do it now. If you have spring material to sell our advertising columns also offer you the best means for accomplishing that purpose. Do it now. In all these things it pays to take time by the forelock and be prepared.

An urgent
duty

There exists no more effective means of increasing the florist, nursery and seed trades than the education of the public in garden work. Anything that awakens a fuller appreciation of floral beauty in the garden is sure to also instil a deeper fondness for floral adornment in the season when gardens have lost their attraction. Too little attention has been given to these self-evident truths by our florists' clubs and kindred organizations. Engrossed in the handling exclusively of greenhouse blooms and often affecting a sort of disdain for the outdoor product and those engaged in its cultivation, many florists have overlooked the direct advantage to themselves and their craft in the cultivation of the public taste and the encouragement of horticulture in its broader phases. A fuller recognition of the benefits to be derived from inducing public interest in garden topics, and a disposition to aid in a practical manner the establishment of nature study and gardening classes for the children of the public schools in every community in the land is the florists' first duty to himself today.

THE MUSINGS AND MAXIMS OF MCGORUM.

The convention of the Rose Society has again terminated and judging from the reports its star is again in the ascendant. The essay of E. G. Hill should be kept for future reference. Coming from a gentleman of so high a standing, "aside from his genial personality," we owe him much. I coincide with the views of our friend Elliott that the Rose Society should be in the hands of commercial men, and its officers should be of that class, or men affiliated with the profession. We will take a step backward if we admit amateurs or those not in commercial work in to the working ranks of the society at the present time. Chicago is to be the next Mecca for the rose men. Well, judging by reports, the western brethren will be able to show us a few wrinkles that we easterners don't know. Here's hoping we may be all spared to see it.

I have just been studying the photograph of the delegates taken on the Treasury steps "just a few steps between them and riches." George Watson looks as if he had taken a fall out of the President. I wonder if the affair took place in the Blue Room. I see George is retaining the hand that shook the hand, etc., "George again"—and just back of George stands Job. Job don't seem flustered; though shorter in stature, he has the bearing of one of his forefathers who was a pedantic ruler of Scotland, and who carried a sword five feet four inches in length. Burns made the owner of that sword memorable by giving us, "Scots wha' hae wi"—Well you know what comes after that, but Job's forefathers' sword lies in a glass case in a certain monument, so the pen being mightier than the sword and better suited for the vest pocket he prefers it. Job says he is "rubbing shoulders with experts" now and wishes to be understood to be in that category. Experts don't usually take their own prescriptions; if they did I wonder where Job would be languishing.

I attended the spring show in Boston Saturday. It was a beautiful show of plants, but the cut flower section was rather meagre. What is the reason that we have not the spirited contests we had some years ago. I am informed that there is something coming on at the fall show in the interests of the commercial men. Society people are offering some handsome special prizes for roses to be competed for at that time. Let the good work go on and I hope the growers will appreciate the efforts of the men who are instrumental in bringing forward this movement.

President Westwood's letter on "Tightening the ties" shows him to be a broad-minded gentleman of a class who sees that antagonisms and divisions mean the ultimate disruption of the whole. Beecher once said, "A man who does not know how to learn from his mistakes turns the best schoolmaster out of his life." I wish to be understood that no party or parties in any club have any right to the moneys of the club any more than any individual member, but when those moneys are wanted by any set of men in a profession for the benefit of that profession, to cause an in-

justice to be stopped, the members ought to rise as one man and help those who are in trouble. Organizations are more to be feared by a certain class of men than men going as individuals. Give president Westwood your strongest support for by his action he stood by the ship when she was in a very rocky quarter. Give us more men like him and we would have a happier and better world. Don't live for self. Give your neighbors a helping hand when in need.

R. T. MCGORUM.

SCHOOL GARDENS.

Editor of HORTICULTURE:

I note with great interest two communications on children's gardens in your issue of March 9th. Good for Mr. Murray. More such generous offers might easily establish a school garden center from which would radiate more substantial support than the movement has ever received.

We have had in Boston during the last six months two school garden conferences, one at Horticultural Hall largely attended by school teachers, school garden workers and those interested in children and in civic improvement, the other at Lorimer Hall under the auspices of the Massachusetts School Superintendents. Both were enthusiastic, well attended meetings and will do a lot to push the good cause along. Why not a conference of the trade to outline a definite policy for helping?

I believe the school garden movement should be thoroughly studied and a definite plan drawn up. The trade should do two things now, get the public interested and give definite help to all. It is a movement which is growing fast but which needs substantial support now as never before. The trade are interested and cannot but see the great advantage in the movement. Let them step in and give balance and strength which will carry it forward with a strength that nothing can break down. The more one studies it the more one believes in it. Now is the time for action. Get together and talk it over.

The report of the Committee on Children's Gardens of the Massachusetts Horticultural Society for 1906 is just out. Anyone interested may secure a copy from Sec. W. P. Rich, Horticultural Hall, Boston.

Very truly yours,

HENRY SAXTON ADAMS.

Wellesley, Mass., March 9, 1907.

WHOLESOME CHESTNUTS.

It is a little early yet to prune hybrid perpetual roses outdoors, but when the work is in order, which it will be in most sections within the next two or three weeks, remember to cut back weak wood more than the good strong shoots; hard pruning within season always insures larger blooms, but not in large numbers. In making a new planting of roses out doors it must be borne in mind that, although plants when growing can hardly get too much water, wet soil naturally is repugnant to them especially in winter and it will be found that when roses are planted in wet ground with no provision for drainage, the roots are mostly dead in spring and the plants of little use.

Roses like a rather stiff soil, but when the best possible results are de-

sired it will be well when starting upon the work of preparation for their cultivation to remove a part of the soil from the place intended for the plants filling the vacancy thus created with the same quantity of good turf grown on a stiff soil mixing therewith a liberal portion of cow manure, never omitting taking the precaution of providing adequate drainage.

Hybrid tea roses in frames should receive all the air possible from now on and their planting in beds should not be deferred after they show unmistakable signs of growth. Any pruning necessary for this class of roses can be given them at leisure before they are planted. Those of the same class out doors all winter may be winter killed down to the surface of their protecting material and a little lower perhaps, and still be of service.

Frau Karl Druschki and Mildred Grant are two superb white roses that no one growing roses should be without. Mrs. John Laing, also a hybrid perpetual although not new, is a pink rose of surpassing beauty in flower and foliage.

The hybrid tea class of roses are fast gaining ground in the march to permanent popularity because they flower steadily till frost checks them for the winter.

No apology is required for making use of cold frames in the early spring under the supposition that frames are antiquated. Might as well apologize for condescending to utilize the heat of the old sun, with the possibility of making as great an impression. Cold frames are indispensable adjuncts to every greenhouse establishment, private or commercial, large or small, but there is a proper time and manner of using them to advantage and it may also be that sometimes it would be better if they remained unoccupied. The danger of such an eventuality is nowadays reduced to a minimum. Most people know perfectly well what to put in cold frames in early spring and in what condition those things should be when placed there.

Geraniums established in their flowering pots may be removed to frames any time, care being taken that they are sufficiently protected from frost. Antirrhinums and other things of like character that have been some time pricked off into flats will do well in frames now. There is much complaint this season concerning the failure of salvia seed to germinate. This is especially pronounced in the case of Bonfire. Plants well advanced now in pots should provide cuttings which will soon root and make nice plants in time for bedding.

Now is the time to go ahead with the work of getting a good stock of coleus ready. Cuttings well rooted, obtainable for half a cent each, will make tip-top stuff by planting time.

Alternantheras will soon claim attention; by dividing and taking cuttings subsequently from a seemingly small stock an enormous quantity may be grown. Keep the plants growing and keep putting in all the cuttings as fast as they reach a fit stage.

Don't allow Begonia Vernon to crowd in flats; pot into three-inch pots as many of these as circumstances will permit of handling; they are preferable in pots, but useful even in flats.

SPRING EXHIBITION AT BOSTON

The Massachusetts Horticultural Society certainly scored a magnificent success last week for the spring exhibition at Horticultural Hall was unanimously acknowledged to be the best spring show ever made by this society. Its superiority was due not only to the high quality of the exhibits and the cultural skill displayed but to

participation of the commercial growers in, these public exhibitions once almost exclusively supported by the private growers. It is very significant when we see a commercial florist capturing the first prize for twelve specimen acacias in not less than three species!

Indian azaleas were shown in great

and in this respect the Boston show suffered but his collection contained several varieties not shown heretofore and was intensely interesting to the rose lover. Cyclamens, always a notable factor in the Boston exhibitions, were fully up to the record. Cinerarias, including stellata, were excellent. Bulbous stock was fine throughout, the narcissus section being especially good and very extensive. The group of hard-wooded plants from Mrs. J. L. Gardner, which occupied the stage in the lecture hall comprised many gems such as acacias, chorizemas, cytisus, rondeletias, eriostemons, etc., and was worthily awarded the special prize offered in this class by the Julius Roehrs Company.

George M. Anderson showed a group of cyclamens, 18 months from seed, which were admired probably as much as anything in the hall and received a silver medal for them. Two plants of Queen Alexandra daisies from George Page, gardener to Mrs. Fred Ayer showed the possibilities with this lovely flower; a cultural certificate was his reward. A cultural certificate was also given to Thos. Roland for a pair of stately specimens of *Cytisus canariensis* which stood like sentinels each side of the loggia steps. A silver medal was awarded to R. & J. Farquhar & Co., for the magnificent group of tulips, hyacinths, lily of the valley and other spring flowering material which is very inadequately represented in the accompanying illustration. The group of acacias from Thos. Roland received unstinted praise from admiring gardeners and well deserved the silver medal awarded. In this and other groups of acacia there were represented *A. armata*, *longifolia*, *pulchella*, *heterophylla* and *cultriformis* and in Dr. Weld's group was a superb specimen of James Comley's unnamed

AMARYLLISES AT SPRING EXHIBITION, BOSTON

By W. C. Ritchie.

the extent and variety of the displays and, most noticeably, to the general layout and the arrangement which was the best thus far in the new halls. Instead of the series of dozens and half dozens of pots and pans of the various competing plants arranged upon long tables, uninteresting to the majority of visitors, the most of the material on this occasion was disposed in great groups and masses, a veritable riot of color, producing an impression that will never be forgotten. It is true that our exhibitors have yet much to learn in the art of plant arrangement for general effect. Cyclamens, lilies and violets do not grow perched up above kentias and dracaenas, and araucarias are decidedly out of place crowded down among daffodils and primroses. These incongruous jumbles are seen at all exhibitions where plant grouping is attempted and they were not absent on this occasion but an intelligent effort to break away from meaningless indiscriminate mixtures was apparent in many instances, and in none with greater success than in the groups by R. & J. Farquhar & Co., and by Robert Cameron of the Harvard Botanic Garden, both of which are illustrated in this issue.

Especially gratifying to the older gardeners and others who have a due appreciation for hard-wooded greenhouse flowering plants was the profusion of acacias, ericas and plants of similar character shown on this occasion. As compared with the exhibitions in recent years it may be characterized as a notable revival of the conditions of "The good old times." Again, it is pleasant to see the growing interest being taken by, and the

er profusion and better quality than on any occasion since the notable display made by Prof. Sargent at the opening of the new hall some years ago. Mr. Walsh's group of rambler roses was much smaller than that of last year, his stock having been depleted by his contributions to the recent rose exhibition in Washington

PRIMULA OBCONICA AND ERICAS AT SPRING EXHIBITION, BOSTON

By Harvard Botanical Garden.

sweet-scented Christmas flowering acacia, which heads them all as a valuable commercial plant.

A prime attraction was the seedling amaryllises from W. C. Ritchie, gardener to Mrs. J. Montgomery Sears. They were the best ever shown here and our photograph does not convey an adequate idea of their beauty. George Stuart was a good second in this class. A seedling Himalayan rhododendron, Mary Weld, the

H. A. Jahn seedling carnations, Mrs. E. S. Crow vase of Farquhar's annual pink lupin (a very pretty flower), Wm. Whitman, gardener Martin Sullivan, for *Cattleya Schroederiae*, R. & J. Farquhar & Co., for *Begonia Gloire de Lorraine* superba, and Julius Roehrs Company for new azalea Julius Roehrs, a variety which when it becomes more abundant will unquestionably take the lead among the commercial Easter blooming azaleas on

CARNATIONS AND ROSES AT SPRING EXHIBITION, BOSTON

sweet perfume of which pervaded the entire hall, was shown in a 6-inch pot by W. C. Rust gardener to Dr. C. G. Weld. The variety is a cross made by Mr. Rust's predecessor, Kenneth Finlayson, five years ago, between R. Princess May Fitzwilliam and R. Veitchianum laevigatum. A first-class certificate was awarded to Mr. Finlayson. The flowers are pure white, of enormous size and crowded on immense trusses. J. E. Rothwell made a remarkable display of about three hundred vases of cut orchids all labelled with elegant precision, winning the Appleton silver gilt medal. There were also some fine orchid plants from Mr. Rothwell, including a lovely specimen of *Dendrobium nobile virginale* bearing three spikes of bloom for which a first-class certificate was awarded. Orchids were also shown in abundance by Lager & Husell and a first-class certificate was given their *Calanthe vestita igneo-oculata gigantea*.

Wm. Sim showed a fine table of winter-flowering sweet peas in many colors for which a silver medal was awarded. Among M. H. Walsh's rambler roses were *Celestia* single pale pink, *Jucunda* light pink, *Hiawatha*, brilliant carmine. *Acadia* double crimson, *Babette* double pink, *Lady Gay* double light pink and *Milky Way* single pure white and very fragrant, a first-class certificate being awarded for the latter. Other special awards were first-class certificates to Peter Fisher for carnation Beacon, Albert Roper for carnation Bay State, Wm. Sim for violet Boston, James Crosbie gardener to Mrs. J. W. Tufts for superior cultivation of *Dendrobium nobile*, Gen. S. M. Weld for *Primula Kewensis*, and Thomas Watt for superior cultivation of azalea; honorable mention to Jos. Breck & Son, for oak jardiniere and display of bulbous flowers, W. W. Rawson & Co., bed of spring bulbs and alpine plants,

account of its vigor, glowing color and size of flower. Among the host of exhibits receiving gratuities of greater or less value in addition to those winning prizes as hereinafter recorded were extensive decorative groups by Ed. MacMulkin and S. Hoffman, schizanthuses and yellow *Cineraria stellata* from Mrs. J. L. Gardner, new and rare greenhouse plants, dracaenas, crotons, orchids, etc., from Julius Roehrs Co., *Narcissus poetaz* Klondyke, Louise and other hardy hybrids between poeticus and polyanthus, from W. W. Rawson & Co., carnation Victoria from J. H. Cushing, herbaceous plants from John R. Clarke & Co., and gardenias from F. Heermans.

Awards in the regular prize classes were as follows:

Plants.

Six Indian azaleas: 1st, Wm. Whitman; 2d, James Stuart; 3d, E. W. Breed. Palms, pair, in pots or tubs: 1st, Mrs. Frederick Ayer; 2d, Wm. Whitman. *Ericas*, six plants: 1st, Mrs. Frederick Ayer. Orchids, three plants: 1st, Wm. Whitman; 2d, J. E. Rothwell; 3d, James Stuart. Specimen acacia: 1st, Mrs. Frederick Ayer; 2d, James Stuart. Twelve acacias: 1st, Thomas Roland; 2d, Mrs. Frederick Ayer. Climbing rose: 1st, M. H. Walsh; 2d, ditto. Six rambler roses: 1st, M. H. Walsh, a Silver Medal. Hardy primroses and polyanthus, twelve plants: 1st, Wm. Whitman; 2d, ditto; 3d, Mrs. A. W. Blake. Cyclamens, ten plants: 1st, Dr. C. G. Weld. Group arranged for effect: 1st, James Stuart. *Cinerarias*, six varieties: 1st, James Stuart; 2d, J. H. Brooks; 3d, Mrs. J. L. Gardner. Specimen *cineraria*: 1st, James Stuart; 2d, Wm. Whitman; 3d, James Stuart. *Cineraria stellata*, six plants: 1st, Wm. Whitman; 2d, ditto; 3d, Mrs. J. L. Gardner. Hyacinths: 1st, Wm. Whitman; 2d, Mrs. J. L. Gardner. Single pans: 1st, Wm. Whitman; 2d, Mrs. J. L. Gardner; 3d, Wm. Whitman; 4th, Mrs. A. W. Blake. Tulips, six pans: 1st, Wm. Whitman; 2d, Mrs. A. W. Blake; 3d, Mrs. J. L. Gardner. Three pans: 1st, Wm. Whitman; 2d, Mrs. A. W. Blake; 3d, ditto. Jonquils, six pots or pans: 1st, Wm. Whitman; 2d, Mrs. J. L. Gardner; 3d, Wm. Whitman. *Narcissuses*, six pots: 1st, Wm. Whitman; 2d, Mrs. J. L. Gardner; 3d, Wm. Whitman. Three pots or pans: 1st, Mrs. J. L. Gardner; 2d, Mrs. J. L. Gardner

Amaryllises, six pots, distinct varieties: 1st, Mrs. J. M. Sears; 2d, James Stuart. Collection of herbaceous spiraeas: 3d prize to Mrs. J. L. Gardner. Group of Easter flowering plants: 1st, Sydney Hoffman. General display of spring bulbous plants: 1st, Wm. Whitman.

Flowers.

Twelve American Beauty Rose: 1st, Waban Rose Conservatories. Twenty-five Bride: 1st, Waban Rose Conservatories. Twenty-five Bridesmaid: 1st, Waban Rose Conservatories. Twenty-five Liberty or Richmond: 1st, W. H. Elliott; 2d, Exeter Rose Conservatories. Twenty-five any other variety: 1st, W. H. Elliott, Killarney; 2d, Exeter Rose Conservatories, Chatenay; 3d, Exeter Rose Conservatories. Twelve Bride: 1st, Joseph H. White. Twenty-five Bridesmaid: 1st, Joseph H. White. Twelve any other variety: 1st, F. Heermans; 2d, Joseph H. White. One hundred Carnations one variety, with foliage: 1st, Albert Roper; 2d, F. R. Plerson Co. Twenty-five crimson: 1st, Wilfrid Wheeler; 2d, S. J. Goddard; 3d, Backer & Co. Dark pink: 1st, E. A. Wood; 2d, Backer & Co. Light pink: 1st, S. J. Goddard; 2d, Backer & Co. Scarlet: 1st, S. J. Goddard; 2d, C. S. Strout; 3d, F. R. Plerson Co. White: 1st, S. J. Goddard; 2d, C. S. Strout; 3d, Mrs. A. W. Blake. Yellow variegated: 1st, Wilfrid Wheeler; 2d, Backer & Co. Day-break colored: 1st, E. S. Grew; 2d, Wm. Whitman; 3d, C. S. Strout. Pansies—Forty-eight blooms: 1st, Mrs. E. M. Gill; 2d, H. A. Jahn; 3d, N. F. Comley. Violets—One hundred double: 1st, Louis Smith; 2d, H. F. Calder; 3d, E. Bingham. One hundred single: 1st, Norris F. Comley; 2d, E. Bingham; 3d, Harry F. Woods. Camellias—Twelve blooms: 1st, Mrs. J. Montgomery Sears; 2d, James Stuart; 3d, Wm. Whitman.

Fruit and Vegetables.

Collection of winter apples: 1st, G. V. Fletcher; 2d, A. E. Hartshorn. Cucumbers: 1st, W. W. Rawson; 2d, Halifax Gardens Co. Dandelions: 1st, A. E. Hartshorn; 2d, W. Huestis & Son. Lettuce: 1st, A. E. Hartshorn; 2d, W. W. Rawson; 3d, Wm. Whitman. Mushrooms: 1st, F. Heermans. Parsley: 1st, A. E. Hartshorn; 2d, W. W. Rawson. Radishes: 1st, W. W. Rawson; 2d, Halifax Gardens Co. Collection of vegetables: 1st, W. W. Rawson.

PHILADELPHIA SPRING SHOW.

The spring show of the Pennsylvania Horticultural Society opened on the 26th inst. continuing for three days. The exhibition was smaller than usual but there were some very meritorious items entered and these created a considerable amount of interest. Among the good things may be mentioned the geraniums and obconicas of William Robertson; the azaleas and amaryllises of Joseph Hurley and the American flag beds of hyacinths and tulips of which latter the exhibit of William Kleinheinz was far and away the best. It was composed of lavender and white hyacinths for a corner piece the balance being formed of red and white tulips all representing the stars and stripes in a very striking manner. Samuel Batcheler was easily first in a competition of obconicas in six-inch pots against strong opposition. There was a fine show of double tulips and double and single daffodils for the Michell and Dreer prizes. A striking item was an exhibit of wallflowers by William Robertson which was universally admired as one of the best grown lots of this plant ever seen here. There were three grand specimens of Whitman fern on show for the Dreer prize—Mr. Hurley's being undoubtedly the best with Mr. Robertson's a close second. The Pink Pearl rhododendron of Joseph Hurley's showing was a winner in every way. Nothing finer has ever been seen here. Thomas Long showed a twelve-foot specimen of *Gleichenia*

ballata which was only a taste of what this exhibitor could do if he felt like it. Messrs. Hurley and Robertson were strong on amaryllis. Primula Sieboldi, pale lavender, pure white and deep purple beautifully fringed and perfectly grown, were never shown in better shape than in the exhibit of Wm. Robertson. There was an interesting exhibit of old fashioned polyanthus of which the entry of Mr. Robertson seemed to carry the honors. Cineraria stellata was very much in evidence. Magnificent plants three feet high and the same in diameter were on exhibition, covered almost to the pot with the most compact and amazing masses of bloom. In the center of the hall were palms and foliage plants. In the corners large specimens of rhaps. In the center big azaleas, pandanus, araucarias, standard mignonette and dracenas. In the general show callas and Easter lilies were a strong feature. Among the daffodils the half-trumpet pure white Mrs. Langtry was conspicuous while the tulip section rejoiced in an equally aristocratic pure white the Jost Van Vondel. Joseph Hurley gained first for three fine plants of Spiraea Gladstone. Wm. Fowler's lot of the same were a close second. Two new seedling geraniums were shown by Mr. Henderson, one of which is a lovely soft pink and seems superior to anything else in its color thus far. John McLeary put up two round beds of spring bulbs one of grass and crocus with hyacinths in the center the other with daffodils in the center surrounded with hyacinths and edged with yellow, pink, and white tulips. Downstairs in the rotunda the most important items were the exhibits of the seedmen, conspicuous among these being those of Messrs. Michell and Dreer. Jno. E. Haines and William Kleinheinz showed some very fine carnation flowers. Robert Craig Company sent a small exhibit of flowering hawthorn.

G. C. W.

ELBERON HORTICULTURAL SOCIETY.

The regular meeting was held on March 18 with President Robertson in the chair. A. Grieb, superintendent for S. Sacks, gave an address on violets which was interesting and instructive. A. Rickards of New York and W. F. Ross of Tarrytown were present and made a few interesting remarks. The principal exhibits were: Vase of Cattleya Schroederiae, which scored highest, shown by W. D. Robertson; Princess of Wales violet, by A. Grieb; callas, by P. Murray; Narcissus princeps, by J. Kennedy; La France violets, by F. Dettlinger; stocks, Princess Elizabeth, by A. Bauer; grape hyacinths, by B. Wychoff; and specimen azaleas, by H. Wood.

GEORGE MASSON.

NEWS OF THE CLUBS AND SOCIETIES

CHRYSANTHEMUM SOCIETY OF AMERICA.

At the executive meeting of the Chrysanthemum Society of America, held in New York City, March 14, it was unanimously voted to hold the next meeting of the society in New York, thereby accepting the kind invitation extended by the American Institute through Dr. Hexamer. The enthusiasm with which the committee enters upon their duties augurs well for a successful meeting in November. The date is left open for the present, and all possible care will be taken to prevent its conflicting with any dates already arranged, so that a majority will be able to avail themselves of the opportunity afforded to exhibit at and visit what promises to be the best chrysanthemum show ever held in New York City. Many valuable premiums will be offered for commercial and exhibition varieties, particulars of which will be published on completion of arrangements.

The constantly increasing membership is very gratifying, proving an awakened interest in the important work of the national society, but there are still many who, by their skill in producing such wonderful examples of the highest culture, should fall in line and lend their influence to the advancement of public interest in the queen of autumn, and thereby become links in the chain of recognized professionals in the culture of the chrysanthemum.

Do not underestimate the value of your accomplishments; identify yourselves with the best growers and share in the mutual exchange of advanced ideas, and so keep pace with the increasing popularity of the flower we all love.

DAVID FRASER, Secretary.

CONNECTICUT HORTICULTURAL SOCIETY.

The regular meeting of this society was held on Friday evening, March 22, Vice-President Huss in the chair. It was Rose night and splendid exhibits were tabled. Among the leading exhibits were: John Coombs, Hartford, Carl Peterson, superintendent of the Whiting greenhouses, West Hartford, N. Nelson, gardener at the Retreat, and J. F. Huss, superintendent to J. J. Goodwin.

In addition to a large turnout of regular members there was a good public attendance and much interest was evinced in the fine exhibition. An animated discussion took place on rose culture in general and on the merits of grafted versus own-root plants in particular. J. F. Huss, C. Peterson and N. Nelson led the discussion and, as might have been expected, the con-

census of opinion was in favor of grafted stock. Diplomas were awarded to Messrs. Coombs, Peterson and Nelson, and a certificate of merit to J. F. Huss. A committee was appointed to arrange for a fall exhibition.

ALEX. CUMMING.

TRI-CITY FLORISTS' ASSOCIATION.

The Tri-City Florists' Association held their first banquet at Davenport, Ia., on March 11. The attendance was large and the affair was most successful. Theo. Ewoldt acted as toastmaster, and a wide range of topics pertaining to florists' interests was presented, among which were The Organization of a Tri-City Horticultural Society, J. T. Temple; Funeral Work, William Knees; Efficient Florists' Help, Henry Meyer; Store Decoration, Harry Bills; Greenhouse Construction, John Staack; General Plant Trade, Henry Gaethge, Sr.; Cemetery Trade, H. G. Pauli; Carnation Growing, Ludwig Stapp; Influence of Parks on the Florists' Trade, C. O. E. Boehm; Has Our Club Furthered a Feeling of Friendship and Goodfellowship Among Its Members? George Farber; Delivering Florists' Stock, Henry Gaethge, Jr.; Nursery Stock, H. G. Bryant; Private Grounds, Elmer Ekstam and Peter Becker; Decorative Plants, Frank Woelz; Landscape Architecture, Its Effect on the Florists' Trade, A. Arp.

At the April meeting ladies will be invited.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The lecturer at the next meeting of the club on April 16 will be B. K. Howard, his subject being "Landscape Gardening." At the May meeting Duncan Finlayson will address the members on "Planting and Caring for an Italian Garden."

The club will hold its annual banquet in April at Horticultural Hall. Tickets and full details can be obtained from the officers and members of the executive committee.

W. N. CRAIG, Secretary.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the society was held Saturday, March 16, president Heeremans in the chair. F. Heeremans was awarded a cultural certificate for a vase of Richmond roses. A. McConnachie won the society's checker tournament, also the medal presented by H. A. Bunyard of New York. At the next meeting on April 6, Mr. John Farquhar of Boston will give a lecture, illustrated with stereopticon views on the gardens of Italy.

G. H. INSTONE.

HORTICULTURAL SOCIETY OF BUFFALO.

With two objects in view, one to broaden the culture of garden flowers, the other to hold a great flower show, as an aid to that purpose, announcement is made of the formation of the Horticultural Society of Buffalo. The formation of the society has been in progress for some time and additions to its membership are still being made, though its organization and plans are sufficiently advanced to have fixed upon a date for the holding of the flower show, the issuance of its lists of premiums and the selection of officers.

The honorary president of the society, Dr. Matthew D. Mann, is also the president of the society for beautifying Buffalo, and a man deeply interested in the culture of flowers. Dr. Mann has done much in the interests of beautifying Buffalo and the other members of the society are enthusiastic over the prospects of a great flower show in Buffalo this coming fall, Convention Hall having been obtained for the entire week of November 11th to 17th, inclusive. The honorary secretary of the society is George B. Montgomery, of Montgomery Bros. & Company.

Many prominent citizens are interested. Prof. Cowell of the Botanic Garden is a prominent figure in the movement and is especially solicitous in the encouragement of horticulture among the school children. A children's day will be one of the special features of the exhibition.

SCRANTON FLORISTS' CLUB.

This club held its first flower show on March 15 and the large attendance and general interest shown promise well for the future. Not only were the local florists well represented but there was a large contingent from nearby towns and contributions from growers at a distance.

Certificates of merit were awarded to C. W. Ward for carnations Alma Ward and Beacon; Paul Niehoff for rose Aurora. Special cultural certificate to C. W. Challis for Cineraria stellata and to Fred Hatch for orchids. Honorable mention to J. E. Haines for carnations Imperial, Pink Imperial, John E. Haines and Seedling No. 6; Leo Niessen for roses; Davis Bros., H. Gerbig, J. L. Dillon, for carnations; G. R. Clark for roses; Chas. Ellebrecht, floral basket; Chas. Schlingmann, Primula obconica. Special mention to John Hill for violets in pots; W. C. Clark, general display; J. Rodham & Son, carnations; Scranton Florists' Supply Co. for floral supplies.

The judges were W. MacDonald, W. C. Clark, B. E. Cokely, J. Rodham, G. R. Clark, Edgar McConnell.

CLUB AND SOCIETY NOTES.

The Gardeners' Association of Pasadena, Calif., will hold their second annual flower show on April 4, 5, 6.

At the next meeting of the New Haven Horticultural Society on April 2, an address on the diseases of plant life will be delivered by George P. Clinton, botanist at the experiment station.

George Bartholomew, the newly elected president of the Dayton (O.) Florists' Club, is manager of the Miami Floral Co., which is one of the largest and most modern wholesale concerns in the State.

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfer and more compact.

Our stock is raised from cuttings and seed, which was procured in Zurich (Switzerland).

Strong Plants from 21-2 in. Pots 75c per doz., \$5.00 per 100, \$45.00 per 1000

Seed Trade

Reference was made in last week's notes to fears expressed of a shortage in the onion seed crop of 1907 by the California seed growers, and it seemed pretty early in the season to begin to cry short crops. Within the past few days certain more or less authentic information has come to hand which seems to justify to some extent these fears. It seems that owing to heavy and almost continuous rains last fall a large part of the onion bulbs were not planted out, but were left piled up in sacks all winter with the result that they have rotted badly or have sprouted to such an extent as to be practically useless. In addition, much of the land in the Santa Clara valley has been under water a great part of the time, to a depth of from six inches to two feet, causing many of the onions that were set out to rot. No reliable estimate of the percentage of onions thus lost has been given, but with the small quantity of seed that will be carried over, and the short acreage in California, there seems no doubt that the next crop of seed will be pretty well up in price.

Reports are that the Ohio crop of onions has sold at fairly good prices, notwithstanding the large crop, choice reds and yellow globes bringing from seventy-five cents to one dollar per bushel. These exceptional prices show what choice types will bring even when ordinary stock can be bought for half the prices named. Many farmers will hesitate over a difference of fifty cents per lb. in the price of seed, for choice selected types, amounting to possibly two dollars per acre, and lose fifty to one hundred dollars on the crop. This is poor business judgment, but it is quite useless to argue with them, as the first cost is all they are capable of appreciating. Onions are by no means the only crop to which these remarks apply, and with all deference the seed trade is not without fault along these same lines.

Much criticism is heard because types have deteriorated, but when a practical grower at the cost of several years of intelligent persistent labor restores types that have deteriorated, or improves existing ones, how many seedsmen are willing to pay him a reasonable premium for superior quality? A few there are who freely recognize superior merit, and encourage all efforts at improvement, and to these few the seed trade is largely indebted for the continued improvements in the types of our vegetables.

HENRY F. MICHELL CO., 1018 Market Street, PHILADELPHIA.

Wyman, proprietor, North Abington, Mass.—Price list of trees, shrubs and herbaceous perennials, "for gardeners and owners of estates only."

Reading Nurseries, J. Woodward Manning, proprietor, Reading, Mass.—Fifty-third annual price-list of hardy trees, shrubs, vines and border plants. Concise and precise. A handy handbook for the home garden planter.

Cottage Gardens Company, Queens, N. Y.—"The Cottage Gardens Nursery Book." This is a very handsome catalogue, profusely embellished with illustrations of fine specimens of the ornamental nursery stock which constitutes their specialty. There are chapters on what to plant, how to plant, and where to plant, and the descriptions of varieties are complete yet concise.

Central Seed and Bulb Co., Chicago, Ill.—Illustrated catalogue of summer flowering bulbs and tubers, flower and vegetable seed, etc. Contains a planting calendar, formulas for spraying mixtures and other useful information. Also trade list for 1907 received. In this catalogue it is stated that E. S. Thompson at the South Haven, Mich., gardens has over 2000 seedlings of the new peony-flowered dahlias and another season will see some of them on the market.

EASTER IN PHILADELPHIA.

Easter week here has been a garden of Eden for the average citizen. On the highways and by-ways of this chastened and contented community of a million and a half the flowers have bloomed in the spring equally for the just and the unjust, and all things have looked jocund and joyous. The bougainvillea has shed its purple lustre on every one who had the price, and the gay azalea has made itself at home in palaces and poorhouses. The fragrant hyacinth and the stately lily have each had their day and their worshippers. The plummy spirea and the plebian tulip have had their votaries, and the hydrangea has vied with the heather in catering to the aesthetic taste of patrician wealth and pride. Only the favored in purse got the heather. Only ambassadors of high degree had standing in the court of Erica and much diplomacy had to be added to pearls of price. Crimson Rambler took a wall seat with genista. Potted lilacs and deutzias made a brave show and found many admirers. But of all the galaxy of lovely things commend me to the made-up baskets and boxes. The fair one who could resist these was either hopelessly insolvent or worried about her divorce. With the dainty Farleyense, the filmy gracillimum and the Parisian ribbon as accessories they were simply irresistible.

The purveyors of cut blooms had their innings also. The violet, the daffodil, the sweet pea,—all fresh and fragrant,—gladdened many a careworn heart and smoothed the tracks for countless messengers of Cupid. The gorgeous American Beauty led its lovely sisters through the enchanted gardens and rubbed shoulders lovingly with the clove-scented carnation.

To mention the high priests of the charming festival would be a vain thing. The Pennocks, the Battles, the Crawfords, the Kifts, the Craigs, the Habernehs, the Faulkners, the Foxes and scores of others from center to circumference were all equally busy and important according to their kind and degree. And the men behind the scenes? The Harrises, the Westcotts, the Grahams, the Craigs, the Bells, the Beckers, the Colfeshes and the Andersons, and others of that ilk? What of them? Busy counting up the cash! Prosaic details are too puerile and uninteresting for our fervid and enthusiastic pen this week. Spring is here! G. C. W.

The printed proceedings of the fourth and fifth annual meetings of the Chrysanthemum Society of America, held in Philadelphia and Chicago respectively has been received. It includes a very valuable review of the work of the Society in the examination and scaling of novelties presented for the judges' inspection in the various cities, also a list of American and foreign introductions for the year 1906. The secretary's address is David Fraser, Penn and Homewood avenues, Pittsburg, Pa.

Henry A. Siebrecht delivered a lecture on Flowers for Easter and for Spring Gardens, at the American Institute, New York, on March 27. This is the eighth in the series of free lectures on Agriculture and Horticulture.

OBITUARY.

Mrs. Henry A. Dreer.

Mrs. Mary Leavenworth Dreer, widow of the late Henry A. Dreer, and formerly a resident of Philadelphia for many years, died on March 25 in Pasadena, Cal. Funeral services will be held in that city, and the body will be sent to Philadelphia for interment in Woodland Cemetery. Mrs. Dreer was born in Reading, Pa., on September 27, 1827, and after her marriage in 1847 came to Philadelphia to live. Notwithstanding the arduous duties connected with a large family, she found time for church affairs and charities. During the civil war she was a constant visitor to the Satterlee Hospital, in West Philadelphia, and opened her house to receive convalescent soldiers. She was a prominent member of the Sanitary Commission, having charge of the horticultural department at their great fair in 1864. She was active in the building of the Northminster Presbyterian Church and Horticultural Hall, and was a manager of the first Young Women's Christian Association, the Presbyterian Home for Aged Women and various other charitable organizations of Philadelphia. In 1888 she visited California, returning there two years later to live in Pasadena. Mrs. Dreer is survived by four daughters and one son, Wm. F. Dreer of the Henry A. Dreer Corporation, Philadelphia and Riverton, N. J.

B. T. Graves.

It is with much regret that we announce the death of B. T. Graves, of Montreal, Canada, at the age of 41. Bertie Graves, as everyone called him, was considered one of the best plantmen and carnation growers in Canada. Some six years ago he succeeded to his father's business, and has been very successful. He leaves a wife and three children. The funeral was largely attended by the local trade and the Masonic order of which he was a member.

Edw. Graves.

Just at this writing comes the news of the death of Ed. Graves, father of the above. No particulars are at hand, but as he was over eighty and in poor health it is not unexpected. Mr. Graves originally came from Peel, Isle of Man, and his place of business was called Mona Nurseries. A son Harry died last November, so that only Mrs. B. Graves is left to carry on the business.

"FIELD DAY" AT WAVERLEY, MASS.

GROUP OF G. AND F. CLUB VISITORS AT W. W. EDGAR'S, WAVERLEY, MASS.

The field days of the Gardeners' and Florists' Club of Boston are always enjoyable in the extreme and among them none more so than the annual pilgrimage to the greenhouses of Wm. W. Edgar Company, at Waverley, Mass., a few days before Easter Sunday. The "fields" on this occasion are vast expanses of lilies, azaleas and acacias all ready for transportation to the city stores and it is certainly an inspiring sight which the generous host spreads before the eyes of his visitors. Then, after feasting the soul he feasts the body, too, and experiences as much delight in the giving as they do in the receiving. Knowing what there was in store for them it is not

surprising that some fifty of the craft appeared in response to Mr. Edgar's invitation last Saturday. They found a rare treat awaiting them for it is an open secret that there is the healthiest batch of lilies in this vicinity, 12,000 pots in one house alone. After a tour through the plant house a group of the visitors was photographed under the big oak tree by Mr. Lumsden and then adjournment was had to the carriage house where an appetizing lunch was served by the ladies and congratulatory speeches were made by a number of the guests under the leadership of president Westwood. The occasion was a most delightful one in every particular.

MOVEMENTS OF GARDENERS.

Robert Mackie, for four years foreman at Allen Winden Gardens, Lenox, Mass., has been appointed superintendent to Charles L. Lawrence, Bayshore, Long Island.

Tom McHugh, Montreal's leading chrysanthemum grower, intends to leave his place at the Forest and Stream Club, and take a position as gardener to M. Davis, the millionaire tobacco manufacturer.

James Stuart, for six years in charge of the estate of the late George F. Fabyan, goes on April 8 to take charge of Mrs. F. A. Constable's estate at Mamaroneck, N. Y. Mr. Stuart is acknowledged to be one of the best plant growers in the country. William Angus, who has served under Mr. Stuart for the past three years, succeeds him as gardener for the Fabyan estate.

CHILDREN'S GARDENS.

We have received from J. B. Heiss a letter of cordial approval of the plan of President John H. Patterson of the N. C. R. Co. to encourage the study of landscape gardening work by the children of Oakwood, Ohio. Four prizes of \$25.00 each are to be competed for and the subjects will include decoration of the home grounds generally and the use of shrubbery as a fence. Throughout the summer, photographs will be made of the lawns and grounds entered for competition and at the time of the awarding of prizes in the fall each child will be given a large photograph of his or her own garden.

Hutchinson, Kan., Mar. 18, 1907.

Please discontinue my ads. for now. Will have some more stock to offer and shall be glad to send my ad. to HORTICULTURE.
JOHN STAMM.

News Notes

George Mahoney of Saco, Me., is in Florida on a short trip.

E. W. Pearson will open a retail store in Newburyport, Mass., on State street.

C. W. Mally succeeds A. F. Burgess as inspector of nurseries and orchards in Ohio.

The Wieland greenhouses at Newton, Pa., have been purchased by Smith & Van Aart, formerly located in Indianapolis.

The Board of Control, Norfolk, Va., have asked for an appropriation that shall cover the erection of a model greenhouse in Lafayette Park.

Randolph & McClements of Pittsburgh, Pa., have purchased the C. T. Siebert estate, which includes 22 greenhouses and six and a half acres of land. The price paid was \$50,000.

J. D. & T. W. Patterson have bought the greenhouses of J. K. Shiffer, Tipton, Ia., and will conduct business under the name of the Tipton Floral Co.

Nurserymen have appeared before the Connecticut agricultural committee in opposition to a bill requiring fumigation of all nursery stock imported into the state.

Pierce Bros., Waltham, Mass., who have been missing carnation blooms recently, caught a young Italian, a former employee, in the act of walking off with two packages of the flowers, and placed him under arrest.

The United States General Appraisers at New York have affirmed the decision of the collector that leaves preserved in their natural state and used for ornamental or decorative purposes are dutiable at 50 per cent. ad valorem.

The greenhouses of Mrs. S. M. Brown and of G. A. Fletcher, Westboro, Mass., were blown down by a high wind which prevailed on March 20. The Brown house was stocked with carnations and the loss is reported to be about \$700.

Supt. Sullivan may continue as he announces, the policy of the late Supt. Doogue, of giving Boston continuous municipal flower shows, but he may easily improve on their scheme of color and arrangement. May we be protected from recurrence of the freak decoration which the Public Garden and Copley Square have suffered.—Boston Evening Record.

CUT FLOWER MARKET REPORTS

BOSTON Although it is yet only the middle of the week, Easter has started in earnest for the wholesale people. The shipments to various points in contiguous territory have been enormous indicating with a degree of reliability the sanguine feeling everywhere as to the Easter flower prospects. Lilies are being sought with a zeal that portends trouble and disappointment for those who took no steps to secure their stock by early order. Carnations have been really scarce all this week—bringing prices much higher than at a corresponding period in late years. This does not necessarily prove scarcity, however, as the opinion seems quite general that growers are hoarding the blooms. If this is so, they are making a costly mistake as good carnations have been selling readily for some time past at figures which Easter will not easily overtop. Violets are available in great quantities, with favorable weather for street wear, however, and if moderate prices shall be established at the outset this enormous crop of the fragrant blossoms need cause no solicitude. Every store is crowded with plants and, judging from the prevalent quality, the plant growers of the Hub have covered themselves with glory and filled their coffers with well-earned cash.

Plans for Easter trade now engage the attention of everybody. Entertainments to follow the Lenten season are being arranged but social affairs just now are in the background. Again much improvement was shown in the flower line the past week considering the amount handled, and the wholesaler feels that a good week's business has been done. Stock in most lines was plentiful and moved considerably better than heretofore. The only things that seemed to be scarce were smilax and plumosa bunches. Roses are still coming in plentifully with demand good, especially Friday and Saturday. The same may be said of carnations, white in particular. Beauties, the article which has been for some time scarce, came in in abundance, with no buyers to clean up and prices tumbled; many were sold 50 per cent. less than quotations. Lily of the valley, lilies, mignonette, myosotis and sweet peas of good quality were to be had, also violets, the latter being on the quiet side up to Saturday when a little life was seen. The prospect for a good Easter trade looks bright, should this excellent warm weather continue.

Many things have contributed to make the past week a good one for all the trade. Never were there so many Easter openings amongst business houses in all lines, and without exception they used flowers, and great quantities of them. There are still a

host of fakirs selling carnations at any price they can get, but it does not seem to perceptibly hurt the regular florists. At this writing it certainly looks as if there would be plenty of stock for the Easter trade, with the exception of lilies, which are sure to be somewhat shorter in supply than for several seasons. One factor that will keep prices at a somewhat lower level than usual is the enormous amount of bulb stock in sight, which at some price will find a market. As I have told you for several weeks past there is a good supply of plants with all the growers, and for these most moderate prices will be asked. Spring officially opened here the hottest for twenty-eight years, the temperature reaching 81 degrees, and for three days we have had practically the same weather; you can therefore imagine how stock of all kinds is coming forward.

Trade the past week has been satisfactory in every instance. Flowers of all sorts and every color are coming into the market in great quantities, but there does not seem to be any glut of anything. Bulbous stock as usual at this time of the year is very plentiful. The majority of growers report an unprecedented shortage of lilies. There seems to be an excellent demand for flowering plants of all kinds. Roses are more abundant; some American Beauty of exceptional quality are seen. Single violets, sweet peas, lilac and lily of the valley are in sufficient supply to meet all demands. The warm weather is causing some little trouble for growers who are trying to back their stock. The Easter outlook for profitable and plentiful business is bright.

NEW YORK The flower trade "hides its diminished head" just at present, and Easter plant business is in full control of the situation. Sales are made, of course, in the wholesale flower marts but with that "back seat" feeling which checks any disposition to over confidence and the Greek finds a welcome and a bargain at every turn. Easter values have not yet established themselves, even in prospect, and there is little to base calculations on except that it seems the general conviction that the supply of lilies is not equal to the expected demand and that prices will be stronger than for a number of years past. The outlook for other flowers is for a normal Easter supply of unusual high quality, with the customary over-production of Dutch bulbous stock, and an unprecedented cut of fine violets.

PHILADELPHIA The warm weather and slack demand were responsible for the poor market last

week. Roses were very plentiful; even Beauties were in heavier supply than the market would absorb. Carnations moved fairly well, but prices were low. Violets plentiful and draggy; lily of the valley about normal. Nothing very brisk in any line and supplies more than enough, although it cannot be denied that the aggregate volume was about equal to that of pre-Easter week last year. The only item that looks to be on the short side for Easter week is good Easter lilies. The fakirs laid in heavily at the end of last week but even they found it uphill work and many of them got a black eye. The advance plant trade is brisk and growers are closely sold up.

Notwithstanding the fact that the week before Easter has always been more or less quiet, the report in general seems to be that all of the dealers have had a very good business. Stock of all kinds is on the market in large quantities and prices are down, to some extent. Carnations and bulb stock have mainly suffered. The price on roses has remained steady, and from present prospects will so remain during Easter week. Easter price lists issued by some of the larger dealers show but a very small advance. Easter lilies seem to be somewhat of a puzzle. Growers who have large numbers do not want to part with them to the retailers. Whether or not they over estimate their own demand remains to be seen. Easter plants, particularly azaleas are especially fine. We will have the usual supply of hydrangeas, hybrid roses, Baby Ramblers and spiraeas.

WASHINGTON Holy week being more rigidly observed than the preceding weeks of the Lenten season, has by reason of this fact caused a general stagnation in the flower market and many fine plants and cut flowers are going to waste. On March 22-23 the thermometer suddenly jumped from normal to 95 degrees which brought in much stock that was being held for Easter. Bulbous stock and azaleas of good quality are over abundant everywhere and move very slowly. Large shipments are looked for at Easter at which time the bulk of both home grown and shipped flowers are expected to be disposed of and make room for those which follow.

Montreal reports trade in general as good, although in the French district the effects of the Lenten season are felt. Shamrocks were good and plentiful for St. Patrick's week. The winter seems to have broken at last. For weeks together the thermometer has registered 10 to 20 degrees below zero, and many plants have been frozen. The change to warmer weather is welcome.

Moss, \$2.00 per sack. Galax, \$1.00 per 1000.
Speed a Specialty. Write for Catalogue.
Coldwell the Woodsman Decorating Co., Inc., Evergreen, Ala.

BUSINESS CHANGES.

W. C. Russell has leased the florist
establishment of H. J. Smith at Mill-
brook, N. Y.

Charles Weiss has purchased the
business of Charles Fraser, Richmond
Hill, New York.

H. F. Halle, the west side florist,
Chicago, has secured the store on the
corner of Clarendon avenue and Sheri-
dan drive, and will open for business
about May 1.

The E. F. Winterson Co., Chicago,
have taken a long-term lease of the
stores 45, 47, 49 Wabash avenue, and
have added to their already large
business the sale of seeds, bulbs and
plants. The florists' supply depart-
ment will be given a place in the new
quarters, thus relieving the congestion
in the wholesale cut flower section.
No change is made in the financial or
managerial affairs of the company.

Are You Ready?

Next Week's Issue
will deal with Garden
Material.

We have room for
anything in advertise-
ments from a "cent-a-
word" line in the
Buyer's Directory up
to a page or double-
page announcement.
And it will catch the
attention of every
dealer and professional
planter in the land
whose trade is worth
anything.

THE F. R. PIERSON COMPANY CUP.

Offered for Hybrid Wichuraiana Roses,
and won by M. H. Walsh.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Summer School of Agriculture.

The teachers' summer school in agriculture announced recently by the Massachusetts Agricultural College is now fairly launched on its career. The organization has been completed, the course of study planned, and nearly all the instructors engaged. Professor F. A. Waugh, of the College Faculty, has been made dean, Professor E. A. White director, and Mr. E. H. Scott registrar. Courses or parts of courses will be given by such well-known teachers as the following: Mr. E. H. Forbush in bird life, Dr. H. T. Fernald in insect life, Dr. J. B. Paige in domestic animals, Professor E. A. White in plant life and nature study, Mr. E. H. Scott in plant culture, Mr. Philip Emerson in methods of teaching nature study in school gardening, Mr. H. D. Hemenway in school gardening and practical gardening. Each forenoon will be devoted to regular classroom and laboratory exercises, while each afternoon will be given to some form of practical field exercises. There will also be frequent evening lectures on popular topics, and excursions to points of interest in the neighborhood of Amherst. The special aim of the summer school is to help grade teachers who wish to spend a pleasant and profitable vacation, which will fit them for better work next year. It is expected, however, that the courses will be valuable for high school teachers, superintendents and all others interested in modern methods of education. The management of the Massachusetts Agricultural College will undertake to provide rooms for a considerable number of teachers, and board will be furnished at a low rate.

PRIZES FOR VINEYARD APPARATUS.

Consul-General Richard Guenther, of Frankfurt, reports that in order to promote the use of mechanical apparatus for working the vineyards the Italian ministry of agriculture invites international competition for submitting machines with motor power of any system for the cultivation of vineyards, the following being the particulars:

The prizes offered by the ministry are: No. 1, a diploma of honor and 10,000 lire (lire 19.3 cents) in cash, also the purchase of two of the apparatus which have had prizes awarded at said competitive exposition. Prize No. 2 consists of a gold medal and 3,000 lire in money. Applications from parties desiring to participate must reach the Ministero di Agricoltura, Rome, Italy, by September 15.

We Want to Tell You Again

that all this talk about Cypress, its goodness, its lasting qualities and-so-forth, is all right, but it doesn't go far enough. Suppose it does last—that's but half the problem; the whole importance lies in where and how it is used. A wooden eave plate of Cypress—is fatal if you want an ice-freeing proposition, one that is not a heavy bar of shade at the very point you want all light possible—one that protects you against end rot in the bars. The H. & Co. steel eave plate and bar bracket are but two of the ways we keep Cypress out and put Iron in—there are a dozen more. Before you buy a stick for an all Cypress house, find out about our iron frame house. Write now while it's on your mind.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is usually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes on Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but **IF YOU WANT THE WINNER, PLANT WINSOR.**

PAUL NIEHOFF, Lehigh, Pa.

Canterbury Bells and Foxgloves

Two of our most showy and useful biennials, no herbaceous border being complete without them. They are of easy culture and practically hardy in the northern States if given light protection during winter by placing pine boughs through them to keep them shaded.

Campanula Medium (Canterbury Bell) single and double also *Caly-anthema* or cup and saucer variety, are raised from seed sown in May or June in pots, boxes or beds, and transplanted about nine inches apart into beds before they become too much drawn, being sure to keep them watered until they get established. In the fall, before the ground becomes frozen, place the pine boughs through them; in the spring transplant to their permanent place. In transplanting always take up a good ball of earth with them, and if possible do it when the ground is moist. After flowering they can be pulled up and thrown away; any that do not flower can be left, and they will make fine plants and flower the following year.

Digitalis (Foxglove) is raised from seed sown in June or July, outside, and transplanted when large enough, about nine inches apart. Protect during winter with pine boughs and transplant in spring to their permanent place. Foxgloves are classed as biennials, but if all stalks are cut off after flowering they will spread out and make large clumps and last for several seasons, producing taller spikes and better flowers each year.

Pruning

A great many orchardists don't seem to have reasoned out from cause and effect, what is the right season of year for pruning, some holding that it matters but little when the operation is performed so that it is properly done, others preferring winter when there is time to spare from other occupations. But my experience leads me to the conclusion that the season at which pruning is done has as much to do with the success as the manner of doing it. It will be admitted that after the cuts have been judiciously made, the right branches, so as to preserve the contour of the tree as it grows, selected to remain and the superfluous ones removed, no spurs being

left to induce decay, that a rapid healing of wounds is most desirable. If we prune in the early spring we shall weaken the growth of our trees by the loss of their sap, which is then freely flowing; if we prune in the summer we cannot do so without damaging blossoms or fruit on fruiting trees; if we prune in the fall the wounds will not heal before the winter sets in and frost will prevent their ultimate healthy healing.

Now it remains to determine which is exactly the right time to prune, and we conclude from practice and observation that as soon as the leaves are developed, in the early summer is the best time, for the following

cogent reasons. At that time the sap has ascended to the leaves, is being elaborated by them and descending to perform its natural functions, namely, forming the tissues of which the tree is composed; it has now been changed by the action of the aeration it has received in passing through the foliage into what is technically called cambium and is only deposited in the tree at the time it is making its annual growth, and then, and then only, quick healing can take place before the hot sun of summer can burn the wounds or the cold of winter destroy them. The healing process takes place in the bark and it makes an effort to cover a wound; in small ones it succeeds and it is after a while impossible, when the trees have been pruned at that right season, to discover when a wound has been made, but on large branches it cannot cover them, but heals all round the cut. It has been recommended to paint the cuts to preserve them from the weather; this may be all right if the wood only of large wounds is painted, but if the paint is extended over the bark the remedy will be worse than the danger, for the oil in the paint will prevent the natural healing of the bark. If any protective plaster is necessary I would prefer cow dung and clay which might help rather than prevent healing.

It is well to look at these subjects from a scientific standpoint, and in this case, if we find that at a certain time cambium is being transformed into tissue and that new tissue is what is required immediately after pruning, then it is a self-evident proposition that this is the time to prune. The above is not a mere theory but is completely established by practice. Some years since I had a nursery and orchard which had been sadly neglected and about the 15th day of June I commenced to give them a vigorous pruning. Some of my neighbors thought I was crazy, but I had studied my position and made up my mind to put it into practice, and so I set to work and went through nursery and orchard. In some cases by the time the last trees were pruned the first small cuts had entirely healed over and the bark around the larger ones was rapidly healing. Later in the season I painted the wood in the centre of the larger cuts, being careful that the paint did not touch the newly formed bark. In the fall all the minor wounds had healed and the large ones in no danger from decay or forming lairs for insects or fungi. More depends upon careful and judicious pruning and at the right season, than many people imagine.

REPOTTING

With the advent of spring repotting commences in earnest, and in order to keep up with the rapid progress of growth there usually is a tendency to rush this work, a practice which often leads to careless potting and consequent poor results. Repotting is one of those duties which to be profitable, must be done with speed. There is, however, a speed limit which it is unsafe to exceed, else some of the work will be certain to be done in a slovenly manner. To have the work performed thoroughly, and with a fair regard to speed, should be set as the standard of excellence.

To produce hardy, stocky plants with short jointed, solid wood, a half-inch shift is preferable to a larger one. This, while entailing more work, saves a good deal of room, which, during the next two months will be especially valuable. When plants are shifted from a 2-inch to a 2 1/2 inch pot they require no drainage. The bulk of the soil added is so small that, providing the soil is properly packed and the material upon which they are set is free from mud, there is no danger of souring.

As there is so little room around the ball when a half-inch shift is practiced, the soil should be finely pulverized before using. Also the ball should be disturbed as little as possible, simply rubbing off the sharp edges around the upper part and placing it in the pot so that the surface of the ball bears the same relation to the new as it did to the old pot, leaving ample room for water. It is safest to use no fertilizing material at this time, avoiding particularly bone meal and all nitrates. Soil left over from last season's planting should be of about the right quality.

When new pots are used particular care should be taken with the first watering as they absorb so much of the moisture that it is difficult to get the soil equally

moist. The best way, perhaps, is to water lightly and frequently until this is accomplished. Pots which have been previously used should be thoroughly washed out-side and in, and allowed to become dry before using.

After repotting the stock should be returned to the house without delay and not allowed to stand around in the potting shed, where there is always more or less draught, which is very injurious. By giving the young plants plenty of room, it is easier to keep spider in check and is beneficial to the stock by admitting more light and freer circulation of air among the foliage.

Young stock, by reason of its soft growing condition, is very susceptible to mildew, and precaution should be taken against this pest by keeping the heating pipes painted with the sulphur mixture, and paying particular attention to the ventilation. During the process of repotting is a good time to discard any diseased plants that may have escaped the grower's notice while on the bench. Disease is ever ready to communicate itself to other plants, and if allowed to take its course, will, in an incredibly short time, work havoc in a batch of young stock.

Watering young plants in pots is a very tedious operation, if done properly, and to obtain the best results requires good judgment and lots of patience. Many dry out quicker than the rest and should be watered as soon as this becomes apparent, as they are very sensitive to drying out. If a reputation for good stock is desired, careful work and careful elimination of all ailing and weak plants must be practiced at repotting time.

J. E. Simpson

Kalmia latifolia

(See Frontispiece.)

There are few more beautiful shrubs when in full flower than the mountain laurel, and a visit to the woods where it grows in quantity at the season when it is in full bloom will well repay anyone. It is a true native of the States, but it required a European to discover it and make it known. This was Peter Kalm, a Swedish botanist, in whose honor it was named. It belongs to the natural order of Ericaceae, the heath and rhododendron family; it is a beautiful sight to see a mass of it in flower, yet the individual flowers are also beautiful, the color being a delicate pink, sometimes white. If the individual flowers be examined carefully it will be seen that nature has endowed this flower with an ingenious contrivance for compelling the flowers to be cross fertilized.

In examining the flowers closely it will be noticed that there are ten little pockets in the corolla, and in a newly opened flower the anthers which bear the pollen are tucked away in these pockets, the filaments being curved and strained tight. If the flower be suddenly jarred or the anthers touched with a pin or pencil they will spring out and the pollen will fly upwards.

When a bee alights on a flower its legs touch the filaments which spring up and discharge the pollen on the under side, and when the bee visits another flower some of the pollen gets brushed off the insect's body on to the stigma, thus resulting in cross fertilization. Should the flower be covered up in order to prevent any insect from getting at it, it will die with the anthers still in the pockets. In landscape work the

kalmia may be used with good effect either in conjunction with rhododendrons or by itself. It requires much the same treatment as does the rhododendron but does not require quite so much shade as some of the rhododendrons, especially *R. maximum*, seems to enjoy.

In examining them in their wild state I have been struck by the fact that the best and most compact plants and those with the best colored flowers were growing in very sandy soil and in a clearing of the woods where they got the full sunshine the greater part of the day.

H. H. Waite

Echoes from England

NEW WINTER CARNATIONS

The Winter Flowering Carnation Society of England held their second annual exhibition today (March 13th) and a delightful lot of flowers were shown. The carnation that attracted most attention was the new clear salmon colored Mrs. H. Burnett, raised and exhibited by Mr. H. Burnett of Guernsey. The petals are slightly fringed and flatly arranged thus forming a wide bloom averaging 2 to 2 1-2 inches across. The flowers lend themselves admirably to decorative purposes. Another striking variety is Marmion said to be a cross between a Malmason and a tree or winter flowering carnation. The blooms are very large, quite 4 inches across; they are so heavily flaked with red that they appear to be red with a broad margin of white. The English-raised carnation Britannia which is not unlike Robert Craig, is particularly fine and a group of this variety was much admired. It is undoubtedly the finest variety of winter flowering carnation raised in this country. Mikado is a large flower that catches the eye at once, not on account of its beauty for it can hardly be called beautiful, but rather from its bizarre appearance. The color of the blooms is dull slaty purple tinged slightly with red.

Aurora is an attractive sort and quite distinct from the majority. I believe all the good varieties we have received from America are self-colored flowers. Aurora is heavily striped with bright rose on a buff ground. The blooms are not so large as some of the better known sorts but they are still of a useful size. Fiancee is a lovely flower and was shown by several exhibitors. Salmon Lawson, Rose Enchantress and White Lawson are sports from well known varieties. Messrs. Hugh Low & Co., Cutbush & Son, H. Burnett, Ware & Co., A. F. Dutton, C. Engelman, S. Mortimer and Mr. Smith (who raised Britannia) were the chief exhibitors.

ROSE RICHMOND

This lovely American rose has been highly honored within the last fortnight. At the last meeting of the Royal Horticultural Society it received an award of merit and today at the carnation show it was similarly honored. It is described as an "Improved Liberty" and certainly from the blooms shown it is superior. It is evidently a valuable forcing rose.

To increase
 the list of Easter
 flowering favorites

Notwithstanding the efforts of the plant growers to increase the number of acceptable Easter plants by the addition of new and promising subjects each season for several years back, the list seems to be actually diminishing so far as a general appreciation goes and the number of varieties that can be grown and sold by the "house-full" is disappointingly small. There have

been added of late a line of forced shrubbery which seems to have made some progress in the public favor, and "Baby Ramblers" which do not ramble and which are liable to be superceded before long by something equally floriferous, but with brighter color. An increase in the varieties of true Ramblers offered is also seen but we recall no other notable additions. In the meantime scores of subjects have been tried—"weighed in the balance and found wanting," at no small expense to the plant growers and one has only to look at the records of bygone Easters as published in the trade papers to realize how the regular bill of fare once presented by the large growers has been depleted. If, instead of depending entirely upon the advice and inducements set forth by the foreign nursery traveler soliciting import orders for untried things, the commercial growers would take an occasional jaunt among the gardeners working on private estates it is not improbable that they would pick up many useful hints as to Easter flowering plants and find a wealth of beautiful material of which the buying public are, as yet, entirely in ignorance. Moreover, much of the material found blooming in the private conservatories at this season is such as may be produced at home—a qualification which should not be overlooked or underestimated.

The appeal of the Society of American Florists to the Interstate Commerce Commission on behalf of some of its members suffering under oppressive ex-

press charges on cut flower shipments, is characterized by our New York contemporary as "an evil that is only local in its application." This seems to us a very shallow view. It might with equal truth be said that small pox and yellow fever are only local in their application—at the start—but it has been learned by sad experience that the time to undertake remedial measures is at the first appearance of these troubles and the question of suppression is universally recognized as something affecting the entire country which would be endangered if the infection were permitted to spread unresisted. No sane man will upon reflection, imagine that, if the double rates imposed by the United States Express Company had been meekly submitted to, the other big transportation companies would not in a very short time have put similar rates in force all over the country. With the United States Express collecting one dollar per hundred pounds on "return empties" from New York to places twenty miles distant is it reasonable to expect that Adams Express would long continue to return empties from Philadelphia to Westerly, R. I., for instance, a distance via New York of two hundred and thirty-six miles, at ten cents apiece? This is not a fight by the S. A. F. "for a few of its members in a restricted locality" but is distinctly a fight on behalf of the entire horticultural industry of the country against a monstrous oppression that had just begun to bestir itself. We agree with our contemporary that the greatest misfortune the S. A. F. has to bear is the meagre numerical support accorded it by the trade. A society such as it is should have the loyal, substantial support of every individual engaged in any horticultural pursuit and the willing co-operation of every horticultural organization on the continent.

DAHLIA HINTS.

Nymphaea is a fine early variety, but for later in the season it is supplanted by Sylvia. Nymphaea spots badly late in the season. Storm King is also an excellent early, but White Dandy or White Swan, which follow it, are preferred by many.

The cactus dahlias are not, as a rule, good keepers or shippers, and their commercial value as cut blooms is impaired in consequence. Kriemhilde and a few of similar type of growth are exceptions. There is as yet no first-class white cactus dahlia. Eva is the best, but cannot be placed in the same class as Kriemhilde, Jones or Mawley. For the dark varieties there is very little demand.

The decorative dahlia can be cut with much longer stems than either the cactus or most of the show varieties, but the show dahlias keep so well and are so easily packed and shipped that they are still high in favor for commercial cut-flower purposes. Many dahlias which are most beautiful on the plant lack either substance, stem or keeping qualities, and fail to give expected satisfaction as cut blooms. Wm. Agnew, for instance, is far superior to any other red as a flower or a plant, but it has poor stems and sheds its petals quickly.

WHAT THE CUT FLOWER WHOLE-SALER SAYS:

A flower well grown is only half-way around the course. It is the selling that counts at the finish and on this depends bank account and coal bin.

Consignors are safest when they leave the question of selling price to their commission man's judgment. He is in touch with the pulse of the market and can be relied upon to take full advantage of conditions as they develop from hour to hour and from day to day.

Customers who buy only once or twice a year, at holiday time or during some special shortage, should not feel hurt if their order is treated as subordinate to that of the steady buyer who gives his support to the house daily, or at frequent intervals throughout the season.

SHRUB CHAT.

Sanguisorba Canadensis is a fine herbaceous plant well deserving of more general use in the hardy border.

The shrub which has been generally known as *Viburnum Molle* is now recognized as *V. venosum* var. *Canbeyi*.

A pink variety of *Clethra alnifolia* is a recent acquisition at the Arnold Arboretum. It will undoubtedly make a sensation when commercially disseminated.

"April is here!
There's a song in the maple, thrilling and new;
There's a flash of wings of heaven's own hue;
There's a veil of green on the nearer hills;
There's a burst of rapture in woodland rills;
There are stars in the meadow dropped here and there;
There's a breath of arbutus in the air;
There's a dash of rain, as if dung in jest;
There's an arch of color spanning the west;
April is here!"

OBITUARY.

Nathan Smith.

Nathan Smith, senior member of the firm of Nathan Smith & Sons, passed away on March 28 at his home in Adrian, Mich.

Mr. Smith was born in Manlius, N. Y., on Sept. 22, 1817, but at the age of three moved to Michigan, and since 1857 he has lived in Adrian. In 1876 he built the first greenhouse of the

THE LATE NATHAN SMITH.

plant which has since grown to large proportions and world-wide prominence, especially in the chrysanthemum field.

Mr. Smith was married in 1842, and his widow and son, Elmer D., survive him. He has always enjoyed excellent health, and his final illness was of but few days' duration, attributed to general wearing out. In his death there is the passing of a good man; having nothing in his heart but the best wishes for his fellow-beings, and with kindly disposition and intelligent conception of things he has blessed the world for having lived in it.

Other Deaths.

Miss Anna Free, daughter of Mrs. M. A. Free, Stamford, Conn., died on March 23.

Thomas J. Kirchner, of Cleveland, O., died on March 26 from the effect of over-exertion during a fox hunt. He was seventy-two years old.

W. J. Cochrane, manager of the bulb and flower seed department of Hurst & Son, London, England, died last week. Mr. Cochrane was in the prime of life, was a well-known figure in the London bulb and seed trade, and had many friends in the United States as well as in his own country, who will learn with sadness of his death.

The New Hampshire Senate has passed an act providing for a bond issue of \$400,000 for the construction of three boulevards from the Massachusetts line to the White Mountains through the eastern, central and western portions of the State.

PERSONAL.

Miss Katherine Olive Weathered, eldest daughter of Charles B. Weathered, and Norman Joseph Cudert, were married at Cranford, N. J., on April 3.

E. A. Tonga, formerly with the Cottage Gardens of Queens, has joined the forces of the Continental Nurseries of Franklin, Mass., and accepted the position of foreman and general superintendent of the nursery.

James Murray, gardener for Henry Clews, Newport, R. I., was taken suddenly ill last Saturday, necessitating his removal to the hospital. His condition is unchanged and critical, causing much concern to his family and numerous friends.

On Thursday evening, April 4, James Stuart was surprised by a houseful of his gardener, florist and seedsman friends, at his home in Brookline, Mass., who presented him with a loving cup and silver tea service with cordial good wishes for his success in his new home, Mamaroneck, N. Y. Much sincere regret was expressed that Boston is to lose so good a gardener, and the Boston craft so good a fellow.

PHILADELPHIA NOTES.

Paul F. Ricker read a paper on "Bulbs" before the Florist Club of Philadelphia on the 2nd inst.

Emil Woblert, Bala, has purchased the greenhouses lately occupied by F. Le Gierse, Jr., at Strathmore. His specialties will be adiantum, asparagus, callas and carnations. The Bala place is to be torn down to make way for house building.

Thomas H. Logan, superintendent of the Newbold estate at Jenkinstown, is busy planning out a new orchard to the south of the Italian gardens. When finished this will contain fan-trained, standard and pyramid peaches, apples, pears, plums, etc., including many European varieties.

The Pennock-Meehan Co. report out-of-town shipments for Easter very large.

A. R. Scott, who has just returned from a three months' trip south, says his place makes more money when he is away than when he is at home and thinks it would be a good idea to go away often. H'm. "I hae ma doots."

According to Phil the everlasting "rising eastern market" sometimes goes down hill. John ought to get married. G. C. W.

NEWS NOTES.

G. Johansen has opened a retail store in Fond du Lac, Wis.

C. P. Loder has opened a retail store at 11 Common St., Waterville, Me.

Ben Boldt of Denver, Colo., who spent the winter in Germany, has now returned and taken possession of the greenhouses of August Schenkel, W. 29th avenue and Homer boulevard.

Joseph Myrtle, a florist of 30 Wilbur Av., Dutch Kills, N. Y., was shot on the evening of March 28 as he was returning home late. Three Italians were arrested. The wounds were not serious.

NEWS OF THE CLUBS AND SOCIETIES

TARRYTOWN HORTICULTURAL SOCIETY.

The regular monthly meeting of the Tarrytown Horticultural Society was held March 26th, President Howard Nichols in the chair.

Mr. Wadsworth Lewis offers a silver

three prizes of \$5.00, \$3.00 and \$2.00; also three other classes with premiums the same, for white, yellow and recently introduced varieties. As regards plants, prizes of \$5.00, \$3.00 and \$2.00 are offered for the best plants of any varieties. M. B. Faxon reported

display of flowers and plants was not large, but was good nevertheless. The floral committee consisting of Messrs. Torrey, Hills, Bauman, Wedemeyer and Monk awarded to I. D. Siebert, for a very fine specimen of Empress of India azalea, 20 points; and to R. A. Currie 15 points for Hydrangea Otaksa. The remainder of the evening was spent in discussing the Easter outlook.

SPRING EXHIBITION AT BOSTON
View in Lecture Hall.

FLORIST CLUB OF PHILADELPHIA

A largely attended meeting of this club took place on the 2nd inst. to hear the address by Paul F. Richter on Bulbs. This was listened to with much attention and was tendered a vote of thanks by the members. We hope to give same in full in an early issue. Jno. Westcott exhibited a plant in bloom of the new pink spirea Queen Alexandra and D. B. Keptyn from Holland told how it had originated. Geo. Buxton having won permanently the Lord and Burnham cup for American Beauty Roses celebrated the event in a free set-out which was much appreciated. Many new members were taken in and much enthusiasm was manifested in regard to the coming convention. Fred Hahman, the vice-president, occupied the chair in the absence of President Pennock. Our general secretary, Edwin Lonsdale, was also absent. David Rust officiated in his place.

HORTICULTURAL SOCIETY OF NEW YORK.

The regular monthly meeting of the Horticultural Society of New York will be held in the American Institute rooms at 4.30 on Wednesday, April 10th, when the subject for discussion is "Plants for Shaded Gardens." The subject will be introduced by Parker

pitcher to be competed for at the fall show, and Mrs. Geo. Lewis offers a silver cup. Julius Roehrs Co. offers \$25.00 for the best table of orchids; H. A. Dreer \$10.00 for the best collection of stove plants; F. R. Peirson Co. a \$25.00 silver cup for carnations; President Howard Nichols \$10.00 for the best six pot plants of chrysanthemums, pots not to exceed seven inches. The executive committee reported on the schedule for the fall show, and suggested a few minor alterations from last year. It was voted to print a preliminary schedule and mail same to members, the complete schedule to be printed as soon as the secretary received all the special prizes. The monthly prize for the best display of flowering plants and cut bloom was awarded to D. McFarlane, as was a certificate of merit for the same exhibit. A certificate of merit was awarded James Ballantyne for his exhibit. Exhibits consisted mostly of Cineraria stellata and bulbous stock in pots and pans. A paper on hardy out-door roses was read by D. McFarlane and freely discussed.

D. McFARLANE, Cor. Sec.

COLUMBUS FLORIST CLUB.

Last Tuesday evening our club held its last regular March meeting. President Stephens was in the chair, and Secretary McKellar was back at his desk after his attack of the grippe. The committee on the chrysanthemum show, Messrs. Faxon, Woodrow, McKellar, Knopf and Stephens, submitted the following schedule of prizes, and they were unanimously approved by the club: For the best vases of five blooms, on long stems, any pink or red variety,

that as yet permission had not been obtained from the Columbus Board of Education to distribute the penny packages of flowers and vegetable seeds to the school children. The club's seed committee appeared before the school board at their last meeting to ask this permission, but did not succeed in getting a hearing. Owing to the nearness of Easter the

ITALIAN GARDENS.

(Abstract of a lecture by J. K. M. L. Farquhar before Massachusetts Horticultural Society.)

The oldest form of Italian garden is undoubtedly the courtyard garden, consisting of a geometrical arrangement of the court into formal beds and borders with convenient paths laid in mosaic or paved, and embellished with statuary, sculpture, sundials, fountains and stationary wash-basins of marble or bronze. Pompeii had numerous gardens of this class, several of which have been restored by the Italian Government, and it is interesting to see the attendants turn the water on the fountains through the system of pyramidal lead pipes which did service 2,000 years ago.

The courtyard garden is of Oriental idea—enclosed for protection, surrounded by an arcade on three or four sides of its rectangular area, and furnished with benches and other accessories to comfort. It was a garden for the family to live in, serving the same purpose as the small garden in the rear of the city houses of Japan, or the high-walled gardens of China, and like these existed for the family rather than for the passer-by.

The second step in garden evolution is seen in the hillside gardens. These occur chiefly throughout central Italy and mark a more advanced state of civilization, when personal security had become established, and when a wall ten or twelve feet in height afforded ample protection to the inmates of the villa. The hillside villa was usually rectangular, the house occupying the highest ground in the rear. The ground was arranged in a series of terraces which were usually separated by parapets frequently surmounted by balustrades. One terrace could be arranged with arched recesses in the retaining walls, in some of which were erected statues for ornament and in others benches where one might enjoy a sun bath quite protected from any chilling breeze. Another terrace would be an extensive pergola, affording a pleasant, shady promenade which the summer sun could not penetrate, and where the inmate might listen to the dripping water from the fountains on a terrace yet below. It was in these hillside gardens that the great possibilities of landscape effect dawned upon the designer. The immediate environment, often uninviting, had to be obscured. If the protecting wall 10 or 12 feet high was insufficient screen, it could be supplemented by a screen of cypress, the fine foliage of which distinguished it from the pines and firs, and the graceful tapering form of which carries the gaze of the observer to the distant surroundings.

It must be noted that through these stages of development the Italian garden remained strictly formal, and its lines were made to harmonize with those of the architecture to which it was linked. It had three chief elements—marble, water and the foliage—flowers were incidental.

An enlargement of the hillside villa marked the third stage of evolution, and brings us to the elaborate garden of the Renaissance. The terrace was broadened into an elaborate geometrically arranged area, in which were disposed sculpture, statuary, sundials and benches of marble. Flower beds were arranged in elaborate geometrical design, and numerous architectural features were introduced, such as well-heads, pergolas, fountains, cascades, and other ornaments. It is this enlarged garden, in its great variety of character and feature, yet always rigidly formal, that has aroused so much interest and the desire on the part of many garden lovers in this country to reproduce it here.

About Naples we find the slopes of the hills covered with compact walled villas arranged with convenient paths, a few cypresses standing like sentinels about the house, here and there an olive, orange or lemon tree, and an abundant growth of figs and grapevines.

In Rome, the villas average larger; they are more elaborate and contain a greater variety of trees, shrubs and plants. The celebrated villa Borghese is a beautiful public park with fine drives, interesting groves of umbrella pine, hedges of ilex and boxwood, the latter frequently forming a background for statuary. It is well kept and contains numerous elaborate flower beds. Flower beds are frequently arranged with a statue for a centerpiece. Such a bed in the Borghese has for its centre an unknown statue found in the Forum; for its edging coral rock, inside of which were planted rows of white-leaved gnaphalium, pink ivy-leaved geraniums and white Paris daisy, in the order named; behind these followed blue ageratum, balsams, scarlet salvia, African marigolds, canna, dahlias, New Zealand flax and Abyssinian banana. The only thing Italian in character in such a flower bed is the statue in the centre; the floral treatment is borrowed from western Europe and is quite out of place. In Rome there are many beautiful water gardens and one is often surprised at the great effects produced with a comparatively small flow.

In southern Italy a large portion of the villa is generally devoted to fruit culture, especially figs and grapes. The latter are supported on live elms or poplars, whose trunks and short pruned limbs serve as trellises.

Florence undoubtedly holds first place for beautiful environment and fine villas. The famous Boboli garden of the Medici family is one of the largest and best preserved. It is entered through an avenue arched with ilex trees, leading to a vast amphitheatre at the rear of the Pitti Palace. It contains many fine avenues, which are perfectly straight, and to me much less interesting than the beautiful Rampa farther up the hill. The Rampa is a public driveway leading along the face of the mountain, lined on both sides

with charming villas and commanding a fine view of the city and its surrounding mountains. Its culminating point is the Piazza Michael Angelo, a magnificent terrace affording a commanding view of the vast amphitheatre-like landscape in the city of art, forms the arena.

In Florence and northwards, garden arrangement has suffered encroachment of the ideas of western Europe, and it is only in the more neglected gardens that the architectural features of the 16th century remains. Many of the older villas have been occupied by foreigners, and foreign ideas, chiefly French and English, have been introduced. The architectural garden, too, affords little opportunity for elaborate floral display, and it has been ruthlessly modified to overcome this limitation. Whenever we find elaborate garden decoration, it follows French ideals, the only difference being that the colors harmonize better and the designs are more graceful in form than the French.

The grounds of the Milan Exposition last year were profusely planted with formal flower beds and borders all of refined and tasteful arrangement, but there was not a single example of the old Italian style of planting. The Italian garden of the 16th century is virtually a thing of the past. It is not built in Italy now and in but rare instances are the old ones kept up. Expense of construction and maintenance seems to stand in the way. There is also a taste for more lavish floral display, to which the arrangement of the old garden is not adapted. We also find in the north of Italy occasional fine examples of natural gardening. In these the most notable feature is the skill with which the gardener uses water in his composition. In American gardens we have hardly used water; we use it in our parks—why not in our gardens?

The best examples of Italian gardens in this country are much more formal than perhaps any in Italy. There, the flowers are a secondary consideration, here the garden exists for them. A natural garden is a much better home for flowering plants than an architectural one on the Italian plan; yet there are many features of the Italian garden which may be profitably introduced here. It will be prudent to say, however, that it should never be attempted upon a small scale or where there is any thought of economy. It is expensive to build, expensive to plant and the most expensive of all gardens to maintain. Yet there are instances where a modified Italian garden may be advantageously introduced. It may be made a suitable setting for an imposing residence, and its features may add much to an architectural design. The present method of using cement, where cut stone was formerly used, will reduce the cost of construction. Almost any kind of stone may be closely imitated by mixing the stone, crushed, with the outer layer

of cement. Even the pergola—pillars and roof—may now be reinforced cement construction, which, if well done, should last as well or better than stone. The beautiful cypress is not hardy in our climate, but we have a satisfactory substitute in the pyramidal arbor vitae, *Thuja occidentalis* pyramidalis.

Water may be profitably introduced as an element of garden construction. Water pipes and basins must, however, be arranged so as to be thoroughly drained off during winter to avoid injury by frost.

To maintain a continuous floral display, the plants must be frequently renewed. In many of the older gardens of Italy we find the floral collection confined almost exclusively to pots and vases. In an old garden in Naples last summer I found growing in pots and vases—amaryllis, agave, carnations, chives, chamaerops, chrysanthemums, lantana, pheasant-eye pink, pelargonium and phormium, while I found only 14 kinds of flowering plants growing in the grounds, of which only two—petunia and amaranth—were in bloom.

The Italian garden as a whole is not to be recommended for general adaptation here. There are, of course, exceptional places like two of our beautiful estates in Brookline, a new estate at Sharon, Connecticut and the vast estate of Biltmore, where it may be appropriately used. American conditions differ from those of any other country, and no imported style exactly fits them. Each garden location calls for a particular style of treatment, which will fit its conditions and environment, and I am forced to the conclusion that in the majority of cases, the more natural the arrangement the more satisfactory will be the result. Where a formal treatment is inevitable, the English terrace garden with a single parapet will usually be found more satisfactory than the elaborate and expensive 16th century garden, which the Italians themselves no longer build.

TREES IN CITY STREETS.

Jackson Dawson in Bulletin of American Association of Park Superintendents.

It seems that the tree planting committees are losing interest, and we will soon have no trees within our city streets. There is no reason why our streets should be treeless, if the proper precautions be taken and suitable space filled with good loam and planted with good healthy trees, prepared beforehand in suitable manner, where they would have plenty of room to develop, training them in a fit way for street adornment. What has been done in other cities certainly can be done in our own. We are too careless about this; we allow anyone to destroy trees; telegraph men, and wiremen of all descriptions. Careless teamsters hitch their horses to unprotected trees, and in a few months the growth of years is ruined. We cannot put this in language strong enough. It is a shame and disgrace that our trees are treated as they are, and there should be a law that would make it a criminal offence for any one to injure a tree on the public highway. Until some such law is enacted and carried out, we cannot have our trees protected as they should be.

SALVIA ZURICH

THE EVERBLOOMING SALVIA

One of the most important novelties in bedding plants introduced for a long time, produces its wealth of flowers while very small and is in its full glory long before any other kind shows even a bud, grows also much dwarfer and more compact.

Our stock is raised from cuttings and seed, which was procured in Zurich (Switzerland).

Theodore Wirth, H. B. Clewley, R. H. Warder, W. J. Zartman, W. T. Egeron and a dozen more of the leading lights in park work.

A Manual on the Propagation and Cultivation of the Peony. Edited by C. S. Harrison, York, Neb. Everybody who knows C. S. Harrison, (and what peony lover does not) will realize without further argument, that this 70 page pamphlet is worth much more than its price, 25 cents. Mr. Harrison, taken by surprise by the reception accorded his first attempt at a peony manual—the first ever issued in any language, has re-written it, adding much valuable information; in fact, most of the matter is new. Much labor has been spent in an endeavor to give a correct descriptive list of leading varieties. We like Mr. Harrison's advice to beginners in peony cultivation "Begin with thoroughbreds instead of scrubs."

W. L. Smith, an employee of the Frank S. Platt Co., New Haven, Conn., accidentally fell down the elevator shaft on March 28, breaking his arm and receiving a slight concussion of the brain.

C. C. MORSE & CO.

EASTER SHOWS AT PITTSBURG.

The Easter displays in the show places of Pittsburgh and Allegheny according to public opinion surpass the efforts of former years. This year's exhibit is the finest ever made at the big conservatories at Schenley Park, where the array of Easter plants is so gigantic that to mention everything worthy of note would take up unlimited space. Special efforts are made here for Easter and spring decoration. In the greenhouses devoted to flowering plants are large blocks of Azalea mollis, Cinerarias stellata and hybrida, Calceolaria hybrida and Lilium longiflorum.

One large house is devoted almost entirely to Hybrid Perpetual roses, which have been timed to a nicety and which certainly look fine. Crimson Ramblers are fairly well flowered. The centre staging of another large house is filled with Hydrangea Otaksa which are flowered nicely. Bulbous plants are grown by thousands, and are effectively grouped in large blocks in the large centre stagings which lend themselves conveniently to this style of arrangement. There are also fine groups of amaryllises and a number of Canna Florence Vaughan were particularly good. Amongst the miscellaneous plants on the side staging are gloxinias, Iris florentina, Lilium sibericum, in fact everything that could be got into flower. The orchid family is poorly represented, Phalaenopsis rosea, Cattleya Skinneri and Dendrobium thrysiflorum and densiflorum only being in flower.

The number of visitors on Easter Sunday broke all records. The management, however, have a splendid system of handling large crowds and a continual stream of people passed in and out of these magnificent structures. It was estimated that at no time during the afternoon were there less than 2500 people in line waiting their turn to pass through.

In the Allegheny City Park Conservatories is a very tastefully arranged group of spring flowering plants, the most noticeable being the very large plants of Azalea indica several of which must be about seven feet in diameter and covered with flowers. Quite a number of orchids are in flower, amongst them being Oncidium flexuosum, Aerides Fieldingii, Vanda tricolor planilabris and Vanda suavis.

At A. R. Peacock's, North Highland avenue, Mr. Jenkinson has arranged a fine display of cinerarias, tulips, hyacinths and other spring flowering plants. Here is the finest strain of Primula obconica the writer has ever seen. The centre staging of one of the largest houses is entirely filled with it and the effect is grand. On the side benches are Begonia Gloire de Lorraine which have been cut back and are now in their second glory. The rose and carnation houses are also in splendid shape. A large number of visitors take advantage of Mr. Peacock's goodness in thus sharing the pleasures of his fine greenhouses with his less fortunate neighbors.

At H. C. Frick's, Homewood Ave., may be seen a fine example of culture and arrangement reflecting great credit upon Mr. Frazer. The amaryllises, amongst which are some very fine varieties, the flowering peaches, hawthorns and double cherries all help to make a harmonious and pleasing array. Sev-

CUT FLOWER MARKET REPORTS

BOSTON Boston's Easter was a remarkable one. Never within the memory of the oldest inhabitant has the weather been finer for Easter Saturday. It was in all respects a glorious June day—the culmination of a week of sun and warmth—which brought forward the lagging flower crops with a rush that completely upset the calculations of everybody and administered a crushing blow to the foolish operator who had stored away his roses and carnations a week beforehand, in the mistaken notion that they would appreciate in value. The salubrious weather conditions had a deleterious effect on the quality of the violets in this market, the single variety largely predominating, but it also saved the violet from the lamentable fate of the rose, carnation, daffodil and lily of the valley. The great purple heaps melted away in stores and on street corners with unprecedented rapidity, and in the great throngs of summer-dressed people that sauntered and surged up and down the retail business streets violet corsages were seen by thousands. Primroses also came in for a goodly share of the corsage trade.

But aristocratic Boston had little taste for cut flowers this year, other than the item above mentioned. It was to the plebeian element that the cut flower grower had to look for comfort after the out-of-town dealer had been supplied. Sturdy American Beauties, carnations of high degree, sweet peas, daisies, snap dragons, freesias and lily of the valley stood untouched in the display refrigerators, while all was hustle and bustle over lily plants, azaleas, rambler roses, apples, lilacs, rhododendrons, hydrangeas and acacias. Some had hopes that Saturday night and Sunday morning would bring in the 11th-hour cut-flower customer, but they were doomed to disappointment. In the meantime the street dealer was doing his best to distribute the surplus, and the grower found in him a most industrious ally. Wherever a vacant doorway or a chink between buildings could be found, there he was with daffodils, carnations, lily of the valley and violets heaped high all around him, and it almost staggers one to think what would have been the fate of the product of that week of sunshine without the help of the fakir and the low-price store.

The wholesale shipping houses had the biggest Easter on record, for the out-of-town demand never wavered in its loyalty to the cut-flower, and the shipments up to Friday night were

enormous. Considering the quantity of material that came to the markets on Saturday morning, the dealers had good reason to be thankful even if carnations did have to be sold for one third of the prices of the previous week. As it was, there were some grievous disappointments.

As was anticipated, the lily supply fell far short of the demand. The full truth was not apparent, however, for stiff prices were charged all along the line, and everything possible was done to divert buyers from the lily to the azalea and other abundant material. Otherwise the lily supply would have come to an abrupt close long before it did. Plants of all kinds were of unusual excellence. The old-fashioned hat-topped azaleas were not much in evidence, the more pleasing, free-branched style being the rule. Two azaleas that gained great popularity were Jean Peters (Double Firefly) and Julius Roehrs. Most of the hydrangeas seen were of the Thos. Hogg variety. Of genistas there were comparatively few. Among the more uncommon things were gardenias, hawthorns, white and pink, and yellow callas.

Conditions favored delivery of goods without protection up to and including Sunday, which, although somewhat overcast, was an agreeable spring day, with neither cold, wind, nor dust to molest either flowers or Easter bonnets.

THE MARKET THIS WEEK.

After Easter the deluge. Never before has the market been called upon to sustain such an avalanche of flowers as has been poured in on top of the big hold-over Easter surplus. Prices for large quantities of anything are down to an unheard of level which the figures quoted in our prices current give little idea of. Lily of the valley, daffodils and tulips are perhaps the worst sufferers, but roses and carnations are badly hit in all grades and all varieties. Sweet peas, lilies and callas alone seem to be able to maintain their standing. Violets are on the decrease so rapidly that they are not likely to affect the market much longer. They are of poor quality as a rule and what they bring is all they are worth.

The Easter shipping **BUFFALO** trade in the cut flower line exceeded previous year. Double the amount of stock was handled but prices were lower, in many lines. Beauties arrived in quantities and all grades but little demand. Good demand was had on Richmond

which were of excellent quality. Killarney, Bridesmaid, Bride and Chateaux were plentiful. Good violets were in demand and cleaned up well while ordinary would not sell at any price and a good many were lost. Peas, lily of the valley, myosotis, swainsona, gardenias and white lilacs were had in good quality, also a river overflowing with daffodils and tulips which were decidedly on the quiet list and a good many carried over. At the beginning of the week carnations were not too plentiful but on Friday or Saturday they were abundant; a good portion of the shipments having been held for a few days they showed the effects after a few hours of exposure. Reports from all points indicate that a satisfactory Easter plant trade was had, thanks to weather man for mild days in which to make deliveries. During the week, beginning on Tuesday plant sales were very lively. The best demand was on lilies, hydrangeas, azaleas and rambler roses. Potted hyacinths sold well but other bulbous stock was very slow. For several days the cut flower trade was very much in the background and the retailers allowed the wholesalers to carry all the stock, buying only as required for immediate orders.

It was without doubt
CINCINNATI the greatest Easter
we ever had. Never

before was so many flowers handled in such a short space of time. With the exception of good roses and violets there was enough stock to meet the demand, and in general was in fine condition. The warm weather brought in bulbous stock with a vengeance, but there was no over-supply, as much of it would not last and had to be consigned to the dump. Store men were slow in placing their orders, for it looked as though the market would be badly over-stocked by Saturday, but the shipping trade was tremendous and at the last minute they had to hustle in order to get what they wanted. Plants were to be had in great variety and sold well. The market started off fine this week. Bulbous stock is nearly all gone but roses and carnations are working overtime and there is no immediate danger of a famine in the cut flower market.

Our Easter trade was
COLUMBUS a splendid one; much more stock, both plants and cut-stock, was disposed of than in any previous year. As regards prices, especially for plants, in most

cases they were somewhat less than last season; we expected such would be the case, for as the writer has several times mentioned the enormous amount of bulb stock here had to be disposed of at some price. Again, the intense heat of the last ten days jumped everything into saleable condition instantly; but our market certainly did wonders to consume such an amount of stock as it did. On the whole a very profitable business was done here. As to plants the stock in the city was the largest ever known here, and considering the good prices obtained for them, we have every reason to feel well satisfied. Azaleas never went so well, Hydrangeas and Crimson Ramblers sold fast, but it was the pots of Dutch hyacinths that sold in unlimited quantities. I should have mentioned above that lilies, being in short supply, held up well, and on the other hand bulb stock, especially narcissus, was in such enormous amounts that it had to be sold at any price.

Receipts and disbursements of flowers during Easter week both enormous, the former leading. The overturn of stock was immense, but incoming shipments were even larger, with the consequence of keeping prices below par. The warm weather, in addition to piling in the cut, affected its keeping qualities, especially in carnations and single violets, these being very soft and causing more kicks than all the rest put together. There was some soft cut lily stock left over, but all the good flowers found a ready market. The length of stem is not of so much importance in design work as for decorative purposes, and the shorts went readily in that connection, much better comparatively than as pot plants. Beauty roses sold fairly close, and were of good quality, practically all long stem. Brides and bridesmaids were good but far too plentiful. Richmonds and Liberties sold better than others, and were pretty well cleaned up. Some nice batches of Chatenay were received, and found ready takers. Killarney is still off color. There did not appear to be any salting either by the rose growers or carnation men, the sleepiness being entirely on account of the hot weather. Double violets were in good demand, but the singles were almost unsalable. Notwithstanding the enormous call for lily of the valley, much remained unsold. Paper whites and Roman hyacinths were fairly well cleaned up. Southern daffodils were a glut. All the good gardenias found ready sale. Sweet peas were in very good demand, especially pink. Cut lilac draggy. Plumosa and other greens sold

CUT FLOWER MARKET REPORTS.

Continued from page 467.

fairly well, but there was evidence here and there of holding until Thursday and then overdoing the call. A more gradual policy would have paid better. Daisies, both yellow and white, much overdone. Orchids scarce.

THE PLANT TRADE.

For both quantity and quality the Easter plant stock put on the market this year was fully equal to past seasons. Some curtailment was noticeable in a few items such as Crimson Ramblers and genistas. Azaleas were in ample supply and very well done as a rule. Lilies were many of them on the dwarf side but otherwise fine and well-flowered. The only striking novelty this year was the new variegated leaved Bougainvillea. It is doubtful if this will make a place outside of an ephemeral demand as a new thing. The green-leaved variety suits the buyers of Easter plants far better. Rhododendrons are getting more popular. Spireas were among the biggest sellers. In tulips the single white, pink, and yellow, sold best. Daffodils and hyacinths in pans are still popular. Deutzias were a little draggy. A new idea in displaying of cut flowers at Battles' was a square basket, deep like an umbrella stand, stained brown and ornamented on one side with pine cones. This looks very rich and unique. There is of course an inner vase for water.

Robert Kift now inclines to the belief that the lily trouble is the fault of the grower rather than the bulbs and that the best of bulbs will not do well unless intelligently grown.

In addition to the new variegated Bougainvillea mentioned there was another striking novelty on display at Battles'—the Rhododendron Pink Pearl—a pale blush with a large truss of well-opened flowers freely produced. This is really a beautiful thing and will be in demand. We are informed that Mr. Battles took the whole of Dreer's importation of this variety, one thousand plants.

The street men had everything their own way, bright sunshine and July temperature every day. There has never been such an Easter in history for the out-door people. The supplies of all kinds of stock seemed to be unlimited and yet by Saturday night everything that was salable found a home and much that was pretty rocky besides. It was indeed a jubilee for the small grower who depends much on his Easter trade to recoup for the dullness and expense of a long hard winter.

An enormous quantity of flowers was distributed for Easter.

NEW YORK The cut of roses, carnations, violets,—in fact almost everything in the cut flower line—was heavy and pretty much everything was disposed of with the usual exceptions. The prices realized were fair considering the large

over-supply. Beauties were cheaper than ever for a holiday, and averaged just about half the price of Easter, 1906. Special grade of Richmond exceeded Beauty in price and sold well. Jacques, always heretofore a good Easter seller had little support from the best trade and brought less than usual. Brummers were also cheap, the reasonable figures at which Brides, Bridesmaids and other teas were quoted made clearances possible except in shorter grades which were hard to move except at very low figures. Notwithstanding the heavy supply of carnations, all might have sold were it not that many were too ripe and went to sleep while awaiting late buyers. The warm weather affected their keeping qualities also. Never were there so many violets, and great was the variation in price, starting from the low level that prevailed during the week in which there was little, if any, demand for them, they finally cleared out at fairly good figures. Hundreds of thousands were disposed of through the street people as a result of the beautiful weather. Many of them, perhaps half the supply, were of inferior quality and were well-sold at any price; odorless and with dropping petals thousands were sold on the street which otherwise would have been thrown away and there were some even too poor to elicit an offer of purchase from the smallest street merchant. The grower who imagined it good business policy to keep his stock on the plant until it was no longer a violet will now perhaps see things in a different light. Orchids were in good demand but there were few in the market. Lily of the valley was plentiful and cheap and where it was held at a figure sales were almost out of the question. Predictions as to the scarcity of lilies were verified early in the day and little stock was unsold by evening. Prices ranged from 12 to 15 cents, the latter figure prevailing for good stock at the finish. Yellow stock—daffodils, tulips, jonquils, etc. was a drag at prices that would not begin to pay for the bulbs. Much of it was still unsold when Monday came. So also was mignonne, stocks, and a miscellaneous assortment of such odds and ends as daisies, smilax, etc. Sweet peas—white particularly—cleared well but not at high figures. Altogether, the great floral festival brought more worry than elation to the hard worked wholesale man.

THE PLANT TRADE.

The plant trade did not differ materially from that of recent years. There may have been a few more camellias used and a few less genistas, a few more baskets of one style and a few less of another, but the favorites of a year ago are still favorites and nothing sensational was in evidence. Pussy willow baskets in many forms were generally popular. Ribbon was used in less quantities and in many instances was replaced by chiffon as a decorative adjunct. Retailers had been

apprehensive that the Wall Street flurry would hurt their Easter trade. They were agreeably disappointed and had the best business of their lives. Some complaint is heard as to lilies, which were not only scarce but were of unsatisfactory quality, showing evidences of excessive forcing. As a rule, large azaleas and large specimen plants generally were not wanted.

TWIN CITIES

Another Easter has gone and the trade in general are all feeling good over the fine business they had. About everything in plants sold well and at good price. It was noticeable that the demand for high-class stock was much better this year than for some time past. Lilies sold well; in some places not one was left, while in others the stock was well picked over and only a few inferiors left on hand. Azaleas sold better than ever, the average price being from \$2.00 to \$3.00 each. Specimen plants brought as high as \$20.00 and \$25.00, but the sale on that size was not heavy. Other plants such as spiraeas, deutzias and hydrangeas sold well, the average being \$1.00 and \$1.50 for spiraeas and deutzias, and hydrangeas from \$1.00 to \$5.00 according to size. Cut flowers moved rapidly on Saturday and fair prices were obtained.

WASHINGTON

Notwithstanding the torrid wave that swept over Washington during the past week and sudden transition from winter to mid-summer, causing injury to plants and cut flowers, the Easter season was profitable to the trade generally. The stores were most attractive with banks of flowers, both inside and out, and ranging from the most magnificent specimens of bougainvilleas to the tiny Baby Rambler roses. The best plants offered were azaleas, hydrangeas, and rhododendrons, which sold readily at satisfactory prices. The Easter lily crop was a general failure, the preponderance of plants offered being short in stature and of poor quality as compared with former years. Growers are complaining of the diseased condition in which lily bulbs were received, and further state that many were not true to name. Prices were in line with those of former years, and there was a ready demand with both grower and retailer.

The old adage, "it's the little things that count," was fully verified this Easter season. While all flowers sold readily and well, for the smaller and cheaper plants, it was a record breaker. None were left to tell the tale.

Owing to the absence from the city of many of the wealthy class handsome specimen plants did not find as ready sale as on previous seasons. Fortunately for the grower, as well as the retailer, the sudden drop in temperature did not occur until Sunday morning, the preceding days being ideally beautiful, indeed, rather too warm for comfort.

POT MAKERS FOR 140 YEARS
A. H. HEWS & Co. Inc. CAMBRIDGE, MASS.
MADE OF EVERY KIND FLOREST

EVERY time you pay your coal bill it jars you, doesn't it? Now suppose you felt sure that every pound of coal burned gave you the largest possible amount of heat returns, and that you got that heat with the least possible attention—wouldn't you feel a lot freer in mind, to say nothing of the money you would make by the money you would save? Then why don't you get that kind of a boiler? A boiler that's built by greenhouse people to meet greenhouse demands—and meets them. A boiler that burns any kind of fuel without change of grate—that has all the latest improvements, from clinker door to damper regulator at the front.

A boiler that combines some of the flue qualities of a tubular with the quick heating and enduring points of a cast iron boiler. A boiler with a fire that has no dead spots—a boiler that responds instantly—one that holds a slow fire when you want a slow fire held—a boiler that demands less attention, and does more for the attention you give it than any other boiler—a boiler that above all is one of economy—a real, genuine greenhouse boiler. Then buy a "BURNHAM" and buy it now—and now means NOW with "Burnhams."

It means now for this reason—everybody is pretty much like everybody else when it comes to wanting boilers—they want them with a rush—write hurry up letters—wire us "why in thunder" and all that sort of thing, but all we do is, ship the boiler in the order's turn—the chap with an order for one, stands the same chance as the five boiler man—but why take a chance; get busy and order it now.

Beautiful cerise, ready for immediate delivery. \$12.00 per 100, \$100.00 per 1000. The variety nearly every florist will grow. Get your order in now and be in line.

The best pure white carnation on the market. First class cuttings ready for immediate delivery. \$6.00 per 100, \$50.00 per 1000.

SEND FOR OUR LIST OF OTHER VARIETIES

CHICAGO CARNATION CO., A. T. PYFER, Mgr. JOLIET, ILL.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Law-on. Unlike most Pinks, the brightest sun does not injure the color. Size—3 to 4 inches in diameter when established. Odor—Pleasing, but not strong. Stems—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. Habit, etc.—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. Productiveness—Productive is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

FUCHSIA Little Beauty. Strong, thrifty plants, 2 1/4 inch, ready for 4 inch pots.

FERNS, Boston and Pierson, 5 inch, \$25; 4 in., \$12; 3 in., \$8 per 100.
Barrowsii, 5 in., \$30; 4 in., \$15; 3 in., \$10 per 100.

Adiantum Croweanum 6 in. 50c each.
Ficus Elastica 6 in., 50c; 7 in., 75c.
Begonia Thurstonii 3 in., \$8 per 100.
English Ivy, 3 inch, \$4.00 per 100.

BAUR FLORAL CO., - Erie, Pa.

Artistic Interior Arrangement of Conservatory with Tropical Plants

The subject which your California subscriber has asked someone to write about is a good one, and very little has been written upon it. It would be much easier to handle this topic if a plan of a large tropical conservatory was given, because there are so many shapes and sizes of greenhouses built now. Therefore, the first thing we have to consider is the sort of greenhouses or conservatories that are most suitable to give the best and most pleasing effects. No doubt, the larger the house the more imposing effects can be produced. Nevertheless, in houses of moderate size really pretty arrangements can be produced if a person has a little artistic ability. As I said in *HORTICULTURE* a short time ago about arranging groups at our exhibitions that we lack originality, we have the same fault in the arrangement of our greenhouses. Everywhere one goes the arrangement is almost always the same.

The plants in a large conservatory or greenhouse are its furnishing just as much as furniture, pictures, and other ornaments are the furnishing of a dwelling house. The tasteful housefurnisher or decorator places his pictures, etc., in the places where they show to best advantage. The same rule may be applied to the plants in a large greenhouse.

The great trouble with most of our greenhouses is that we have too many plants in them; with such a condition we are not able to arrange them artistically and we do not get the comfort or enjoyment we ought to get out of them.

A great part of the beauty of many plants is lost when ample room is not given to display their individuality. It is true that many of our greenhouse plants come from tropical forest jungles where they have a very poor show. The jungle in the tropics is the place where one can witness the struggle of the plants for an existence. We do not see them there under the best conditions, and we do not want to copy that in our greenhouses. What we want to study is a piece of tropical vegetation where the conditions are all favorable, when the plants are fully developed and do not have to struggle for life. The plants must have ample room to develop if we want to produce that beauty of stem and graceful curvature of leaf and frond, which is most pleasing to the eye. Large plants such as palms, tree ferns, and bananas, whether planted out or otherwise, should not be arranged in straight lines in the centre of the house, but should be placed irregularly and far enough apart that their leaves or fronds do not touch one another. Under the shade of these plants such things as calatheas, marantas, anthuriums, ferns and selaginellas may be used.

The advice in the above notes relates more to the plants in the centre of the house. The plants on the benches should be smaller and groups of flowering plants add much to the beauty and effectiveness. Far better effects can be produced if the plants are set in groups than if mixed indiscriminately. Groups of such plants as ixoras, clerodendrons, imantophyllums, bougainvilleas, eucharis, gardenias and stephanotis when in blossom give a fragrance and brightness to the surroundings that is sure to charm anyone. The same applies to plants with highly colored foliage such as codiums, dracaenas, acalyphas and such like; they, too, are more pleasing when arranged in groups.

There is nothing more lovely in a large greenhouse than a roof well-covered with climbing plants. They need a great deal of care and patience to get really satisfactory results from them. They should be tied up

carefully and neatly to wires which have been provided. At the same time the flowering branches should hang down gracefully and away from the glass. Some tropical climbers that give stunning effects when properly trained are: *Thunbergia grandiflora*, *Thunbergia laurifolia*, *Stephanotis grandiflora*, *Porana paniculata*, *Allananda Hendersoni*, *Solanum Wendlandii*, *Passiflora quadrangularis*, *Petrea volubilis*, *Bignonia venusta*, *Bougainvillea glabra* and *B. spectabilis*.

There are many little things that add very much to the artistic effect. Nothing gives a more tropical touch to a large house than a few well-grown *nepenthes*. If they are given suitable places their pitchers are always sure to attract attention. The staghorn ferns (*platyceriums*) in the same way are extraordinarily striking when placed in positions where they will show to advantage. *Tillandsias* and *bromelias* are curiously shaped plants living on very little but air and moisture; their quaintness adds much if they are placed where they can obtain plenty of sunlight which makes them flower profusely.

The stems of tree ferns can be clothed with the small creeping polypodiums or climbing *philodendrons*. *Oncidiums* and *epidendrums* can be attached to stems of large palms or tree ferns where they will give pleasing glimpses of how they grow naturally in the tropics. Under benches where the ground is not covered with pipes should be planted with *Tradescantia zebrina*, *Selaginella Krusiana*, *Rex begonia* or *Panicum variegatum*.

There is nothing that makes a more pleasing border along the edges of the benches than a row of small pots of *Panicum variegatum*. Its variegated leaves and stem hang down gracefully over the front, obliterating the bare and barren look of the edge of the bench. Scores of little things like these can be added which are always sure to give pleasure after they are once done. Plants, pots, and, in fact, everything ought to be clean in an artistically arranged house. Neatness and tidiness count for a great deal.

A large tropical house, to produce fine effects with large plants, should measure at least 200 feet in length, 50 to 60 feet in width, and not less than 50 feet in height. This will seem a large house to some persons but I will give you the dimensions of two large houses in which I helped to arrange the plants and where fine effects were produced. They are the palm house and the temperate house or winter garden at the Royal Botanic Gardens, Kew, England. The palm house is 362 feet long, the width of the centre is 100 feet and it is 66 feet high. The wings at both ends are not quite as high or as wide. The temperate house or winter garden is probably the largest plant house in the world. The central division is 216 feet long, 140 feet wide, and 60 feet high. The octagons at both ends of the central division are 54 feet in diameter. The south wing measures 116 feet long, 64 feet wide, and 38 feet high. The north wing also measures 116 feet long, 64 feet wide and 38 feet high. The total length of the structure is 628 feet. The cost was about \$300,000.

In the vicinity of Boston the best arranged tropical house is to be seen at Joseph H. White's place in Brookline where James Wheeler presides. The large palms, cycads, and other plants are given ample room to show their individuality.

Robert L. Emerson

Fruit and Vegetable Forcing at Irondequoit, N. Y.

A HOUSE OF CUCUMBERS
View from Above.

A HOUSE OF CUCUMBERS
View from Below.

That Irondequoit occupies a unique and comparatively enviable position among localities where fruits and vegetables of various kinds are grown in great abundance, all who are familiar with the situation are aware; and that it is not alone for the great quantities of fruits and vegetables that are produced within the borders of the town, that she is noted, but for fruits and vegetables of superior excellence in appearance and quality.

Intensive, expensive, and extensive are words which convey to one nearly the entire thought, in connection with the culture and growth of fancy vegetable stock by the green truck gardeners. To give an idea of one immense farm is difficult. It is not extensive as to acres, but extensive as to yield; intensive in science and expensive in maintaining, yet returns a fair profit.

Vegetable growing is most profitable especially the green house department, for the reason that there is a greater demand for good green truck in winter than in the hot months of summer. The risks on crops may be greater, but the profits are correspondingly large. Some gardeners make a business of growing mixed crops, while others specialize with one. By mixed crops is meant the growing of lettuce, radish, cucumbers, parsley, beets, tomatoes, carrots, and other vegetables. The mixed crops in Irondequoit green houses seem to pay better profits because of the town being near to city

markets which demand a large quantity of first-class truck. The gardeners do not handle their own product on the city market, but sell in wholesale to the retail merchants. The grower ships much of his produce to other city markets, finding it safe to ship 50 to 300 miles, so that the field of the grower is rather broad. But in shipping the grower must take into consideration the extra expense of express and freight rates for transportation.

In the early days of gardening in Irondequoit land could be purchased for \$50 to \$100 per acre, but at the present time one is fortunate to find a good piece of gardening land for \$1,000 per acre. The average size of a gardener's plot is ten acres. The gardener when he starts to build up his garden-farm after building house, barn, and sheds, puts up greenhouses, it may be one or two possibly more, and they may vary in size from those spaded by man to those ploughed by horse power. The cost of the houses may be \$1,000 or \$3,500.

In floral culture more than one kind of flower cannot always be grown to good advantage in one house, but vegetables are different. One can see many houses with five or six different kinds of vegetables in a good state of growth. To build up a garden-farm like the average in Irondequoit would require an investment of nearly \$20,000. The ten acres of land would cost \$10,000, three good greenhouses \$5,000, a good house

\$1,000, and other equipment \$1,000. And the gardener considers these a good investment.

Some such establishments have been erected and by careful planning the gardener has discovered it to his advantage to erect more greenhouses until some now have ten or twelve, and have built tenant houses for the help which sometimes number five or six.

The growers draw from the city and order from other cities, the manure used for fertilizing the soil. Failures in crops sometimes happen; the reason seldom being apparent and such a case puts the grower to studying.

Specialization in cucumber or lettuce offers opportunities for growing crops of the highest quality and for competing in the market for the very best prices. The cost of specializing is practically the same as for general crops, but, the man who has trained for general gardening often meets failure when he attempts to specialize on one crop.

These big-little farms are whole stories in vegetable culture.

H R Peachey.

Irondequoit, N. Y.

British Horticulture

GOOD PRICES FOR ORCHIDS

Some duplicate orchids from the Earl of Tankerville's Chillingham collection were recently sold at the auction rooms of Messrs. Protheroe and Morris in London. Many of the lots realized high prices, the highest being £735 for *Odontoglossum crispum*, var. *Leonard Perfect*. The plant sold was a portion of one shown last year at the Holland House exhibition, when it aroused great interest amongst the orchidists. It was afterwards purchased by Mr. Cookson and the Earl of Tankerville for £1100 and divided into two. It will thus be seen that the Earl made nearly £200 out of this transaction, once more emphasizing the fact that there is still money to be made from this branch of horticulture. The plant sold consisted of a single bulb and growth. The buyer's name did not transpire. Amongst other *Odontoglossums*, Mabel Whately realized £210, a second plant being knocked down for £189; two plants of brilliantissimum sold for £189 and £147 respectively. Tankerville made £105 and *ardentissimum* £105. The total amount realized by the 251 plants was £3,280. Most of the lots had to be bought "on trust" as far as the blooms were concerned. Very few of the plants were in flower, but the most expensive were depicted by colored illustrations showing the form and markings of the flowers. The sale created keen competition amongst the buyers.

A NOTED HORTICULTURIST'S DEMISE

British horticulture has sustained an irreparable loss by the recent demise of Sir Thomas Hanbury, who was the owner of a famous garden in the Riviera. For some years he kept up an interchange of plants and seeds with

gardens all over the globe. His noted collection included a great variety of plants especially agaves aloes euphorbias, yuccas, cacti, etc. Australian and New Zealand plants were also largely represented. The garden attracted visitors from all parts of Europe. Sir Thomas Hanbury will long be remembered in Britain for his generosity on behalf of his favorite hobby. A few years ago when the growth of suburban London caused the Royal Horticultural Society to seek for a more congenial spot for their garden than Chiswick afforded, Sir Thomas came to the society's aid. He purchased the garden of the late G. Y. Wilson in the heart of rural Surrey, and presented it to the society on condition that its main features were preserved. The garden is about sixty acres in extent, and favorably situated for a successful carrying on of the society's experimental work, and the gift has immensely aided the work of the premier horticultural organization. The donor was very unassuming and desired no publicity for his great services to his fellow horticulturists. His knowledge of plants was very wide, and his happiest periods were spent in the garden, where he was always willing to place his extensive knowledge at the service of his many interested visitors.

ANOTHER CARNATION SHOW

The second show of the Winter Flowering Carnation Society, held on March 13th, was very encouraging to the promoters. It indicated that the new society has come to stay. At present the exhibitions are made up by the fine specimens contributed by the trade, but there is no doubt that in time the amateur growers will be more in evidence. Guernsey, the home of numerous market growers, has come to the front in the new development of carnation culture. On this occasion the island was well represented. Some floral designs proved a popular feature. The most striking was a tall cross of white carnations rising from a plinth, with a wreath of violets at the apex. Only one novelty received the attention of the Floral Committee, and this was an improved White Lawson, which received a certificate. There is every evidence that the cult of the winter flowering carnation is steadily developing in this country.

A REMEDY FOR A BLACK CURRANT PEST

For some years fruit growers have sustained heavy losses, owing to the ravages made by the black currant gall-mite. So serious has been the damage sustained that on a number of nurseries there has been a cessation of black currant culture. Growers who secured some of the so-called disease-proof varieties were doomed to disappointment. The remedy which has chiefly been adopted against the ubiquitous insects has been the grubbing up of the bushes, and their destruction in a bonfire. As a result of some exhaustive experiments, W. E. Collinge, director of the Department of Economic Zoology at Birmingham University, has discovered what he regards as an effective remedy. Experiments were made with some affected bushes. The bushes were dusted over three times in about two months with powdered quick-lime and sulphur—one part of the former to two of the latter. It was seen that even where the big bud had made its appearance, in altogether reduced numbers, the few mites found within them were almost wholly immature. The treatment will now be tried in various parts of the country as a result of the recent publicity given to the experiments.

W. H. Adsett.

Cucumbers Under Glass

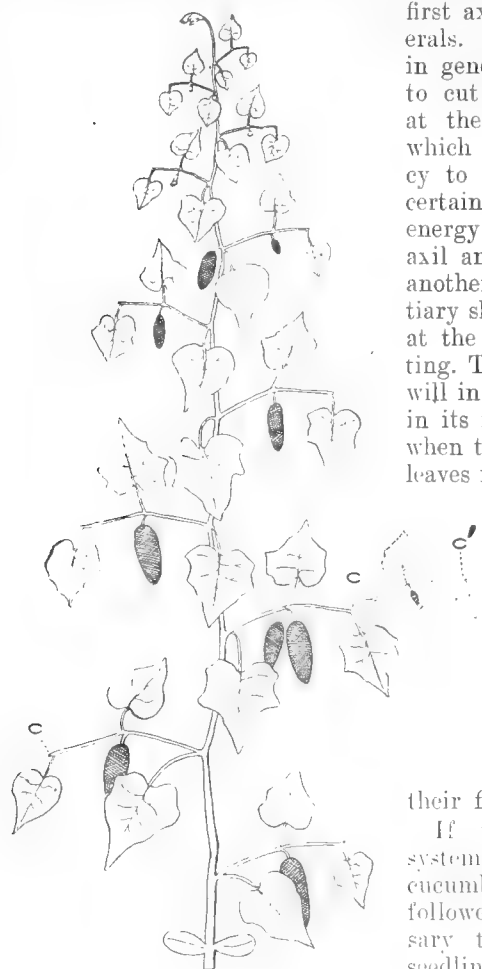

11.

PRUNING

The object of pruning is to limit the growth of the plant in certain directions, and concentrate the production of fruit in certain axils, and since cucumbers are quite constant in their habit of setting fruit, advantage can be taken of this fact. Fruit is generally to be found in every seventh axil on the main stem and every

first axil of the laterals. In pruning, in general it is best to cut every lateral at the second leaf, which has a tendency to concentrate a certain amount of energy in the first axil and will induce another (lateral tertiary shoot), to start at the point of cutting. This new lateral will in turn set fruit in its first axil, and when this forms two leaves it can likewise be pruned like the others. This method of pruning causes the formation of a series of laterals which set fruit in their first axils.

If the two-stem system of training cucumbers is to be followed it is necessary to prune the seedlings about the time the first leaf is

Single Stem System

formed. The pruning should be done just above the first leaf, which will cause a new shoot to start there, and induce another shoot to start in the axil of the cotyledons, but the majority of cucumber growers make use of a single stem.

GROWTH OF YOUNG PLANTS

Cucumber seeds may be sown in flats containing earth of a loose texture, or in special houses adapted to the growth of seedlings. It is not advisable to force seedlings too rapidly, since they are likely to "damp off." "Damping off" is a seedling disease peculiar to the cotyledon stage, and cucumbers are usually immune to this after they have formed one or two leaves. When these are formed, the plants should be carefully transplanted into pots or directly into permanent beds, if necessary. More care should be taken in transplanting cucumbers than lettuce, since a lettuce seedling will revive when transplanted, even though there is no soil on the roots, whereas it is advisable to disturb the soil

around the roots of a cucumber plant as little as possible.

TEMPERATURE

The normal temperature for cucumbers is about 65 degrees at night and 85 or more during the day. Temperature requirements vary with the condition of the weather, as a higher temperature can be maintained in sunshiny than in cloudy weather. During a series of cloudy days it is well to keep both the day and night temperatures down. This is more necessary when cucumbers are grown in poorly lighted houses than in well lighted ones, since light is pre-eminently a factor which produces texture in plants. Care must also be exercised against too high soil temperatures, since certain troubles result from them.

WATERING AND VENTILATION

Ventilation requires the most careful attention, since the presence of a certain amount of fresh air renders the plants more hardy and prevents infection from mildews, etc. There are probably no features connected with the care of plants which offer more examples of carelessness on the part of gardeners than watering. Over-watering of cucumber vines is easily accomplished, especially during cloudy weather, when evaporation from the soil and transpiration is slight, and in such cases the soil is likely to become soaked and remain in this condition too long for the welfare of the plants. On bright, sunny days, when transpiration and evaporation are active, it is necessary to apply more water. Too much moisture in the air is conducive to fungous infection, and this is especially true in regard to the various mildews.

DISEASES

The diseases of crops under glass are so clearly dependent upon conditions, such as light, moisture, and heat that it is always necessary to consider them in con-

Two Stem System.

nection with the general management of the house; in fact, there is no detail of greenhouse management which does not, in one way or another, influence crop production and bear upon susceptibility to disease.

There are two mildews which are met with in cucumber houses, one of which is known as the powdery mildew, which occurs on the upper surface of the foliage, more abundantly on the lower leaves or older ones, which possess a reduced vitality. Powdery mildew seldom, if ever, occurs in houses which are well lighted and ventilated, and can generally be found when the opposite conditions prevail. Fortunately powdery mildew is not a serious factor in cucumber growing, and if attention is given to the moisture, heat and light there is little probability of its gaining a foothold.

Downy mildew is a more serious factor to deal with, although it occurs in houses only during a short period of the year—from August to late fall. We have never failed to hold this in check by controlling the moisture conditions. If new crops are not started until the latter part of September and October there is little risk of the mildew's appearing in the house; therefore, the best way to keep it out of a house is to start the crop rather late and maintain at first dry conditions in the atmosphere of the house.

Bacterial wilt has lately caused some damage to crops of indoor cucumbers started in August. It has not been observed on cucumbers started in September, and what is true of downy mildew appears also to be

true of bacterial wilt. In general it may be stated that if growers wish to start their crops in August the atmosphere should be kept dry, and if any syringing is to be done, it should take place on sunny mornings when the plants will dry off quickly, not allowing the spores to germinate.

This is also true of Anthracnose, which is common out-of-doors in August on melons and cucumbers. This disease, however, occurs in greenhouses in spring as early as March, and it is necessary to be on the lookout for it at that time of the year.

There are various other troubles common to cucumbers which are the result of peculiar handling of the crop. Some of these are leaf curl, stem curl, wilt, etc.

Timber rot is occasionally present, and eel worms have been known to do much harm to cucumbers under glass. The former is not a very troublesome disease, but eel worms have proved to be so, and the best method of eliminating them is by sterilizing the soil.

G. E. Stone

Amherst, Mass.

A Palm House at Oakdale, N. Y.

The accompanying picture gives an interior view of W. K. Vanderbilt's palm house at "Idlehour," Oakdale, L. I. Its noticeable feature is the unique employment of a raised vestibule entrance, giving an opportunity to look directly down upon the palms and showing to the best possible advantage their individual beauty. These raised vestibules give a charming note of distinctiveness to such a house and take away that usual storage room effect.

This design and treatment was the work of the Lord Burnham Company, who replaced (at one-third the cost) the original \$70,000 palm house with its heavy shade-casting architectural features, which made the thriving of palms an impossibility.

From the mass of Easter items clipped Making progress from the daily papers we gather abundant evidence that the florist business all over the country is being conducted on a higher and more intelligent plane than in times past. Florists

are apparently learning that the newspaper reporter, wisely handled, may be made a very influential agent for their benefit. It is not so very long ago that many of the flower dealers seemed to consider it quite the proper thing to boast and exaggerate concerning the details of their business, to spin fabulous yarns and on the approach of any special holiday to give currency to most alarming predictions as to scarcity and inflated values of flowers. Today we find the papers teeming with alluring news and gossip of the flower stores, telling of the good things being prepared to appease the flower hunger of everybody—those with slender purse as well as those with abundant means—and that there will be plenty for all. We note with pleasure other auspicious movements, on which the trade may be congratulated and to which we shall have occasion to refer at another time.

It is in the air that the recent Easter experience with forced bulb flowers has so discouraged the growers of such stock that the importations of bulbs for this use next season are likely to be much reduced. While no one can blame the grower for feeling keen disappointment when he finds himself compelled to accept a return for his flowers which scarcely covers or possibly does not cover the first cost of the bulbs, yet it must be evident to any one cognizant of the conditions that the bulb growers' methods might be improved much to his own advantage and for the benefit of the flower market in general. In no branch of the floricultural profession do we find such haphazard methods or more wasteful extravagance. Take for instance the quantities of early-forced tulips that are to be seen in the wholesale markets at the Holidays—mere shreds of color and practically valueless, yet every bulb thus destroyed had to be paid for in good money. Indeed a large proportion of the tulip shipments reaching the markets all through the forcing season show poor judgment in the selection of varieties, over-forcing, rough handling, and hasty packing. Apparently little thought has been given to bringing out the finer character of these flowers or to provide the buying public with the finely cupped, stout petaled blooms which it is possible to produce under careful culture. Good form is an essential in the tulip as it is in all other florists' flowers and the flimsy looking specimens usually seen are not calculated to help this flower in the estimation of the buyer. The above observations apply with equal force to the narcissus in all its forms. One finds it difficult to recognize in the fragile, flabby material so abundant in the flower markets, the sturdy sorts which produce, under favorable conditions, those superb heavy-textured flowers which compel the admiration of everyone. It would be interesting to know and, we doubt not, would disclose some startling figures if a reliable estimate could be made of the proportion of the entire forcing bulb importation which goes to loss, either through inferiority of bulbs or unwise treatment in forcing and marketing the product.

WHOLESOME CHESTNUTS.

We know too well that there is but a small enough margin of profit in bedding plants when all or practically all the stock grown is sold, but if a surplus of large proportions is left on hand a serious matter is up for consideration. Invariably the cause of much of this left-over business can be attributed to poor stock, plants not in bloom or faulty guessing in regard to best sellers. The latter condition we may not always be able to control, but the two former are without doubt of our own making.

Always aim to have every plant in flower that should be in flower. It will be of little use entering into a lengthy discussion with a customer in regard to superior or equal merits of a plant not in flower; the average customer considers such the same as buying a pig in a bag.

Geraniums in 3 1-2 or 4 in. pots placed pot to pot and left in the same place four or five weeks at this time of the year cannot reasonably be expected to show up stocky and furnished with foliage down to the rim of the pot when taken up. Move the plant occasionally, letting air in around them. Leave a little space between each plant; it will help so much to bring the plant up to what will be expected of them. Don't check geraniums or anything else by a sudden exposure to a radical change of temperature, because such action will affect their blooming propensities. Admit air gradually after the plants are in frames if such disposition is made of them.

Pansies are always favorites with the fair sex when out shopping early in spring and should be displayed in full view of passersby. Pansies grown in flats right along can be exposed for sale without being disturbed; just lift the plants from out the flats with sufficient soil attached to insure their subsequent well-being. Plants lifted out of frames should have enough soil clinging to the roots and made somewhat additionally adhesive with the hand. These plants should be placed moderately close in flats and displayed the same way as the others.

Salvias should, by selling time, be in new pots but should have been long enough in that size to cause them to be pot bound, because in that case the foliage will not have that soft green appearance essential to the good health and thrifty condition of the stock.

Cannas, when offered for sale at retail, should be well started into growth either by placing the clumps on a bench and lightly covering them with soil, and then after they have started potting them into 4 in. pots, or dividing them right away and placing portion divided into a 4 in. pot. One eye will be sufficient for the formation of a plant. Another method of starting cannas is that of dividing the roots and then placing them in flats 3 1-2 in. in depth, leaving them in these until planting time. Pots are more generally satisfactory for several reasons.

Please discontinue my geranium ad. I have so many inquiries for plants and I am sold out of the small sizes I advertised.

WM. DOEL.

Pascoag, R. I.

STENANTHIUM ROBUSTUM.

Courtesy of H. P. Kelsey.

The remarkable hardy perennial is, without doubt, one of our best new introductions, and may be classed with the showiest of all herbaceous plants. As the buds begin to unfold in early August they are quite upright, and of a light green tinge, gradually becoming whiter until at last they burst forth into a veritable snow-bank of drooping, fleecy bloom of purest white, the panicles often 2 to 3 feet long. In September the flowers, as they ripen, turn to shades of pink and purple. It is a vigorous perennial, attaining a height of from

5 to 8 feet when well established, and is absolutely hardy throughout the United States and Canada.

The Mountain Feather Fleece is of easy cultivation, and, if given plenty of food, makes a wonderful show equaled by few plants of any description. Give rich soil and ordinary border location.

The illustration gives some idea of the wonderful effect of *Stenanthium* when in full bloom, but inadequately conveys the beauty of the delicate, feathered, drooping flowers. When known, it will be planted by thousands.

NOTICE TO FLORISTS' CLUBS.

At your next meeting get a list of your members who would like a carnation measure. Mail the list to Kroeschell Bros. Co., 35 Erie Street, Chicago, Ill., and they will mail each a measure free of charge.

"Any one of these vases of flowers \$1.00, including vase."

The above sign is displayed in the window of A. Warendorf on Broadway, New York, in connection with a number of vases of long-stemmed flowers tastefully arranged, each showing a different combination of colors. The vases are of clear glass, of graceful form, but inexpensive, and the idea seems to be a good one, especially at the present time, when all flowers are so low-priced in the wholesale market.

PERSONAL.

James Shea of Lowell has taken a position with Quinn of Brookline, Mass.

H. D. Brooks of Manchester has taken a position with E. P. Stannard of Westbrook, Ct.

F. A. Bartlett of Hampton, Va., has taken a position as manager of Kilravock farm, Litchfield, Conn.

M. Stauch leaves Council Bluffs, Ia., for a position with the Pittsburg Rose and Carnation Co., Bakerstown, Pa.

Joseph E. Rolker, of August Rolker & Sons, New York, sailed on April 4 for Europe to superintend the filling of orders and look for novelties in the florist forcing line. He expects to be absent about six weeks.

NEWS OF THE CLUBS AND SOCIETIES

NEW JERSEY FLORICULTURAL SOCIETY.

Orchids prevailed as usual at the April display held on the 5th instant. Lager & Hurrell exhibited *Cattleya Schroderae* alba and *Laelio-Cattleya*. G. S. Ball, both of striking appearance, and vases of the various season's blooms. Julius Roehrs Company contributed beautiful examples of *Cattleya Schroderae* var. *Baroness*, *Cattleyas Rutherfordense* and *Mossiae*, *Odontoglossum Pescatorei* and their new crimson azalea *Julius Roehrs*. Joseph A. Manda displayed four *Cattleya citrina*, and *Cypripedium Salisii pictum* var. with a yellow margin to dorsal sepal instead of the usual white. Orson A. Miller also exhibited orchids. Carnations were shown from S. and A. Colgate. William Reid, gardener, and Charles Hathaway, Max Schneider, gardener, who also had *Cineraria stellata*, tulips *Kaiser Kroon* and *amaryllis*, *Empress of India*, J. Crosby Brown, Peter Duff, gardener, contributed a vase of white and purple *schizanthus*, and also a specimen *Adiantum dolabriform*. Judges for the evening were A. T. Caparn, M. Mac Rorie and Edward Roehrs.

The paper of the evening was by John E. Lager upon *Travels in the Tropics* and was received with marked attention. It was decided to hold a special rose night on June 7 and a dahlia night. The schedule for the fall show received its first reading. This is now an assured fact from the guarantee fund of \$200 already subscribed among the society's patrons and still growing. Designs for the society's medal were displayed, but action delayed until next month. Resolutions of condolence were read upon the death of the late Orson D. Munn and ordered spread upon the minutes. J. B. DAVIS.

NEW YORK FLORISTS' CLUB.

Monday evening, April 8, was ladies' night at the club headquarters, 23rd street, and the club kept "open house" with characteristic hospitality. The attendance was not large, there being only about seventy-five present, of whom nearly one-half were ladies, but the affair was particularly home-like and enjoyable to a greater degree than would have been the case had the attendance been twice as large. Songs and piano music were acceptably rendered by a number of visiting ladies and by the club's own musical entertainers, the Rickards brothers and John B. Nugent. Other members, of more timid disposition, were not at all backward in coming forward with some resounding choruses after the ladies had gone to the banquet hall. Messrs. O'Mara and Stewart were called upon to say something about the recent rose convention at Washington, and responded briefly, the former eloquently advocating the encouragement of amateur support for the American Rose Society, the latter giving it as his opinion based upon two years' experience as secretary of that society, that the "high society" element is not yet prepared to co-operate with the trade people in any enterprise of this kind.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting in Manchester on April 6th, president McGregor in the chair. Mr. Thomas Jack read a very good paper on greenhouse plants and their cultivation, treating this subject on broad lines, principally describing the varieties most suitable for window and conservatory work during the winter and for the piazzas during the summer. Mr. Jack enumerated a great number of the old reliables as well as varieties of more recent introduction, describing the different methods of propagation and treatment as regards watering, shading, temperature, etc.

In the discussion following Messrs. Parsons and Salter spoke on cyclamen culture, recommending that the seedlings be left in the seed boxes until they have attained a good size before potting off, and during the summer months to be planted out in frames and grown with good ventilation and light but sufficient shading.

Certificates of merit were awarded to James McGregor for three vases of antirrhinum and to James Salter for spikes of *Lilium Harrisii*.

J. K. M. L. Farquhar will give a stereopticon lecture on *Gardens of Italy* in the Town Hall, Manchester, on April 26. WILLIAM TILL.

CONFERENCE AT NEWPORT, R. I.

The R. I. League of Societies for Rural Progress had a conference in Newport and Middletown on Monday and Tuesday of last week. On Monday evening a meeting was held in the Grange Hall, Middletown, Master of the State Grange Marchant in the chair. The speakers were President Butterfield of Amherst Agricultural College, President Edwards of the R. I. Agricultural College and Professor Wheeler, director of the R. I. Experiment Station. All the speakers confined their remarks to agriculture and more especially the claims of agricultural colleges for recognition as sources of instruction in practical agriculture.

On Tuesday Mr. Clapp of Boston spoke on the school garden question, and Mr. Rogers of the same city on the gypsy moth problem. In anticipation interest was chiefly centered in the evening session when Prof. Bailey of Cornell was scheduled to speak. Considering his subject Bailey's address was more than satisfying but his subject was exclusively agricultural and agricultural college work, and his audience, which was disturbingly small, was not agricultural by any means. Nevertheless the professor was listened to and appreciated to the extent his universally recognized ability deserves.

The conference on the whole may be productive of some good but the lack of interest on the part of the general public was surprising, considering the array of prominent men participating. Even the horny handed farmers of Middletown, in whose behalf without question the greatest exertions were put forth in order to bring them into a state of civilization, were luke warm in their reception, but it was always thus even in the days of the early evangelists.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The subject at the club meeting April 2nd was *Roses and Bulbous Plants and Blooms*. The Pittsburgh Rose and Carnation Co. made an attractive display of roses, and the president of the company, Fred Burki, was called upon for his opinion of the many varieties. Many of us were surprised to hear his strong commendation of *Madame Cusin*. Attention was called to its good keeping qualities, its fragrance and that it sells better than *Bridesmaid* or *Killarney*. Evidently here is a treasure that has been somewhat underestimated. *Wellesley*, was never before shown at our meetings. The flower much resembles *Chatenay* and did not seem sufficiently striking or distinct to gain a strong foothold. *Killarney* merits much of its praise. Its bud is exquisite. *Bride* is still the best of its color, and *Bridesmaid* still holds a good place. *Miss Kate Moulton*, attractive with its heavy, broad foliage, is not particularly free, and a little weak in the neck; but sufficiently good to warrant another year's trial. *Madame Abel Chatenay* is a fine all round rose, with the longest, strongest stems of any. Despite what Shakespeare makes King Richard say, there is but one Richmond in the field. A magnificent rose, the best grown. The sentiment of the club seemed so strongly with the speaker on this point that the secretary was instructed to write the originator of the rose, E. G. Hill, and express to him the congratulations and appreciation of the club, on his having introduced such a rose to the world.

There were no American Beauty shown. A few years ago a rose show without the American Beauty would be like the play of Hamlet, with Hamlet left out, but now with the multiplicity of good roses the omission is not so striking. Our rose growers are dropping the American Beauty; they say there is more money in other varieties, and even with them the carnation seems slowly pushing the rose to the wall as far as profit is concerned.

Allegheny Park Conservatories, Wm. Hamilton, supt., showed a collection of unusually well-grown cinerarias, *Cineraria stellata*, hydrangeas, several pots of *amaryllis* in bloom, *gloxinias* and a *tydea*. Dr. Shafer, *Laelio-cattleya hybridensis*, unique in color. Phipps conservatories, Schenley Park, showed some 25 or 30 pots of *hyacinths* in variety, the merits and demerits of which were discussed by Mr. Jno. H. Bockman, representative of the Holland Bulb Co., who was present at the meeting. The statement of one of our largest tulip growers that after forced tulips had bloomed, he cut the tops off, and planted the bulbs out doors in the fall, and had better flowers from them than from unforced bulbs planted in the open at the same time, was received with much incredulity by the Dutch representative. Mr. Bockman explained the method of growing *hyacinths* in Holland, the high cost of land, the great amount of labor in preparation of the soil, and the many years of time involved in

the production of a marketable bulb, and claimed the price was not at all too high.

The matter of delinquent dues is always a delicate one to handle, and when it was brought before the meeting it was decided that in the few almost hopeless cases the secretary should write a final notice for settlement before the next club meeting, but the majority of ordinary cases were assigned to personal friends of the delinquents for an interview. This plan has been tried in former years and been very successful.

The "Credit" question has become a prominent issue in Pittsburgh and it with "Bedding Plants" was made the subject of discussion for the next meeting May 7th. H. P. JOSLIN, Sec'y.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the monthly meeting of this society, held on the evening of April 8th, a large audience gathered to hear N. Allen Lindsey of Marblehead deliver an address upon the culture of the dahlia. Mr. Lindsey was unable to come. He hopes to make good his promise at a later date. The subject of the dahlia was not allowed to rest. A. J. Jahn took the floor and replied freely to numerous questions regarding his experience with raising dahlias and carnations. The meeting, which was the best attended of any since the society started, was full of interest and instruction.

At the monthly exhibition of plants and flowers, *Dendrobium nobile* was shown by Wm. Keith and begonias Lorraine, Turnford Hall and superba by James Garthly.

THOMAS WHITE.

DAYTON FLORISTS' CLUB.

At the last regular meeting of the Dayton Florists' Club, April 4th, G. W. Bartholomew, the newly elected president, presided. A unanimous vote of thanks was tendered the retiring president, J. B. Heiss, for his untiring services rendered the club.

It was decided that the Dayton Florists' Club subscribe \$150 to the guarantee fund of the National Flower Show. The Easter trade was reported good. It was the general opinion of all that there was a marked increase in the demand for blooming plants. There was an ample supply of most all cut flowers, for which there was a healthy demand.

DETROIT FLORIST CLUB.

The meeting of the Detroit Florist Club, April 4, was the best attended of the season. Apparently the desire to exchange Easter experiences and the prospect of listening to two papers of great importance, one on plant bedding and bedding stock by Robert Unger, horticulturist at Belle Isle, and the other on florist clubs by J. F. Sullivan, were attractions enough to lure every member from his fireside.

NEW HAVEN COUNTY HORTICULTURAL SOCIETY.

A meeting of the above society was held last Tuesday night, about 60 members being present. Prof. Clinton of the Connecticut Experiment Station gave an instructive lecture on Fungi. He illustrated his lecture with stereopticon views. It was one of the finest lectures ever given before the society.

VIEW IN PALM HOUSE, SOUTH PARK BOTANICAL GARDEN, BUFFALO, N. Y.

We present herewith an interesting view in the great palm house at the Botanical Garden in Buffalo, looking

up through the palms to the central tower. This house was designed by the Lord & Burnham Company.

WASHINGTON FLORISTS' CLUB.

At the regular monthly meeting of the Washington Florists' Club held April 2, it was hoped that all the loose threads left of the rose convention would be taken up and finally disposed of, but it was found impossible to do so. Some important matters were however disposed of.

The \$50.00 silver cup offered by George H. Cooke for vase of 50 best Richmond roses and won by Wm. H. Elliott of Brighton, Mass., was shown around for the purpose of deciding upon the proper inscription.

Pres. Bisset instructed Sec. McCauley to write notes of thanks to Edward A. Beaven for the wild smilax donated by him, and used in decorating Convention Hall; also to W. Weber for his services as judge at the convention. The secretary was likewise instructed to write similar letters to George C. Shaffer and as-

stants for competent and artistic manner in which they decorated the banquet hall. Messrs. Beaven and Weber returned the checks sent them by the club for services rendered, as did also David Bisset for the violet prize won by him, and Z. D. Blackstone the \$25.00 prize for his mantel decoration. Prof. Weber's name as honorary member of the club was voted upon and accepted. It will be remembered that credit is due him for transplanting the orange further north. (It is also rumored that he crossed two oranges and got a lemon.)

Fred D. Owen connected with the public buildings and grounds has written to Z. D. Blackstone in regard to enlisting the interests of the Florists' Club to assist him in connection with the government, in making Washington more beautiful. The idea is to interest tenant and property owner alike in beautifying their premises. In order that they may do so intelligently and be instructed as to what, when, and how to plant, Mr. Owen asks the hearty co-operation of the club. "F."

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

At the next meeting in Horticultural Hall, on April 16, B. K. Howard, instructor of the late landscape classes, will speak on landscape gardening. Fine exhibits are promised and other interesting features will make the meeting one which members cannot afford to miss.

The annual club banquet will take place on Wednesday evening, April 24, at Horticultural Hall. Reception at 6.30, banquet at 7 o'clock, followed by a musical entertainment and dancing. Tickets are \$1.50, and can be had from the officers of the club and members of the executive committee only. None will be sold after April 20. As an exceedingly large attendance is anticipated, an early application for tickets is urged.

W. N. CRAIG, Secretary.

AMERICAN CARNATION SOCIETY.

Carnation Registered.

By James D. Cockroft, Northport, N. Y. Sensation. Color, a beautiful shade of bright cerise; form, well built flower of large size; calyx perfect, does not burst; stem from 24 to 30 inches and over from September to July. Keeping qualities of the best, early free and continuous habit, strong clean growth, every shoot producing a flower.

ALBERT M. HERR.

Lancaster, Pa.

CLUB AND SOCIETY NOTES.

The Horticultural Society of New York hold their annual exhibition on May 8 and 9 in the Museum Building of the New York Botanical Garden.

Alex. Cumming of Elizabeth Park, Hartford, Ct., addressed the Amateur Horticultural Society of Springfield, Mass., on Roses, on the evening of April 5.

The ninth in the series of lectures on agriculture and horticulture under the auspices of the American Institute of New York, was given on April 10 by Leonard Barron. Subject: "Lawns: How to Make, How to Keep and How to Renovate Them."

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

BUFFALO, N. Y.—E. C. Brucker, 385-87 Elliott St.
CLEVELAND, OHIO—A. L. Hutchins, 2220 East 74th St.
COLUMBUS, OHIO—M. B. Faxon, 246 Oak St.
CINCINNATI, OHIO—Frank W. Ball, 31 East 3d St.

SAN FRANCISCO, CAL.—Luther Monnette, 866 Isabella St., Oakland, Cal.
TWIN CITIES—John A. May, 163 Iglehart St., St. Paul, Minn.
TOLEDO, OHIO—J. L. Schiller, 929 Prouty Ave.

HEATING TOPICS.

About Boiler Inspection.

Referring to Mr. Palmer's report at the Gardener's and Florists' Club meeting on the hearing at the State House on the inspection of boilers I wish to say that I attended that meeting and as far as I could learn it was simply a dispute between the engineers and boilermakers, as to who should have the right of inspecting the boilers in the State. After an experience of fourteen years throughout the states erecting greenhouse boilers, I would say that the skilled mechanic should have the preference over all others. I have set up hundreds of boilers in greenhouses, among them tubular boilers that the Hartford people had cut the pressure on; they are running under a pressure, from 15 to 30 lbs. for ten years or more and I find the plate in the boiler practically just as good today as when it left the shops.

In regard to licensed firemen, I would rather a good upright and honest greenhouse man who has had

experience with fires, than a number of the licensed firemen of today. I know of a case that came under my notice, where a licensed fireman was the cause of almost freezing an entire greenhouse.

ers are run you will find the fault is not with the boiler in a great many cases, but with the one who has charge of boiler.

In regard to push nipple boilers I would say they are just as good for heating purposes as any cast-iron boiler, but they are not quite so safe as the lock-nut nipple boiler. If any part of a push-nipple boiler needs repairing you have to take the whole boiler apart, whereas with the lock-nut nipple boiler, if a part or section gives out, you can take a three-wheel pipe cutter and cut the connection to the damaged section, plug up same, and your boiler is ready for work again.

All hot water boilers should be thoroughly cleaned every other year. A very good way to do this, would be to close the main supply and return valves to the boiler, put on water gauge, so placed that gauge cock will show water in boiler when it reaches to within three inches of top, also have a steam gauge attached to boiler. Then fill your boiler until gauge cock shows water within three inches of top; start a wood fire in boiler and when you have from 10 to 30 lbs. steam draw the fire and blow off boiler. This will carry off all sediment. I would say too that there should be a safety valve on boiler when blown off by steam. Steam boilers should be blown off at least twice a year.

DANIEL ILIFFE.

D. ILIFFE.

experience with fires, than a number of the licensed firemen of today. I know of a case that came under my notice, where a licensed fireman was the cause of almost freezing an entire greenhouse.

Hot Water Boilers for Greenhouse Heating.

During my experience in greenhouse heating I have set up a great many different styles of boilers, among them, horizontal tubular, upright tubular, lock-nut nipple, push nipple, and portable upright cast-iron boilers. The tubular boiler makes a very good boiler for heating purposes, when properly taken care of. All the water should be run off and the boiler thoroughly cleaned once a year; when boiler and system should be refilled, and left so until it is required for use again. All boilers should be properly valved on supply and return.

The cast iron boiler should be blown off by steam, so as to clean out the boiler thoroughly. A great many boilers are found fault with as not giving satisfactory results, but if you look into the manner in which these boil-

PUBLICATIONS RECEIVED.

The National Chrysanthemum Society's (London) Year Book for 1907. This valuable publication is edited by Charles H. Curtis and C. Harman Payne and contains a vast amount of information valuable especially for the purpose of reference by chrysanthemum growers, the world over. Among the contributions therein are the following: Chrysanthemums in America, by Chas. H. Totty; Chrysanthemums in Decorations, by Dorothy M. Oliver; Early Chrysanthemums from Stool Divisions, by Percy A. Cragg; Chrysanthemums in Australia, by Thos. W. Pockett; Exhibition Incurred Chrysanthemums, by W. Higgs; Analysis of the National Chrysanthemum Society's Show 1905-6, by C. M. Collingwood; Chrysanthemums for Town Gardens, by Elderbert F. Hawes; Work of the Floral Committee and Classification Committee for 1906, by D. B. Crane; Market Chrysanthemums, by David Ingamells; Single Flowered Chrysanthemums, by W. C. Pagram; The New Chrysanthemums of 1906, by Chas. H. Curtis; New French Incurred Chrysanthemums, by C. Harman Payne. Portraits of several of these writers are given, and Charles E. Shea, president of the National Chrysanthemum Society is the subject of the frontispiece. The paper and typographical work are high class and the book is handsomely bound in cloth. The price is one shilling.

EXTRACT FROM "RAMBLING NOTES ON TREES AND SHRUBS."

(Read Before the North Shore Horticultural Society, by J. W. Duncan.)

It is too seldom the case that enough attention is given by gardeners to the proper manner of planting trees and shrubs. Why they do not thrive better is often wondered at, not only by the owner of the place, but by the very men who planted them. I believe that every estate should have its own little nursery, and that before plants are put in their permanent locations they should have, at least, one year in that little spot where they will get a chance for proper care with the pruning knife, and have an opportunity to make those fibrous roots that are required to make a healthy growth when put in their permanent locations.

The first step in transplanting a tree or shrub is to have it properly dug. This should be done so as to save all that can be saved of the fibrous roots, and when the plant is being taken from one location to another care should be taken that the roots are well protected from the sun or drying air, which will, in a very few minutes, destroy the finest fibre of the roots and check the plant just so much in taking hold in its new location. This is the main reason why the gardener will do well to have his own little nursery. There are few nurserymen that take the proper pains in digging their trees and shrubs for shipment, and, consequently, a large percentage of them die or do not recover their active growth for a year or two. Perhaps the most important part, however, in tree or shrub planting is to have the ground properly prepared. If a tree or shrub plantation is to be made the ground should be deeply ploughed and subsoiled, having been gone over at least once each way with both land plow and subsoil plow. This will loosen up the soil so that the roots will have a chance for immediate action. If a piece of ground is so prepared in the autumn, planting may be done in the spring; and, by the way, spring is the most suitable time to plant all kinds of trees and shrubs. Although some species may do well enough if planted during the autumn, yet, in most locations, better results will be obtained if the planting is done in the spring. Many deciduous trees will do best if transplanted when the buds are just about to burst open: I refer to such trees as the maples, oaks, beeches, etc. I have often heard it said, and many eminent authorities agree, that, for transplanting evergreens, the late summer or fall months are the best; but, be that as it may, I never would recommend it, especially near the sea coast. There is no better time, I believe, to transplant pines, spruces, junipers, etc., than in the latter part

of the month of April or just before the new growth starts. Do not wait until it is started, as is often done, and that growth is checked for that season at least. I have been told, and I agree in the main with my informant, that as good a time as any to transplant rhododendrons and kalmias is when they are about to come into bloom. Pick all the flower buds off before moving, and the result will be that the plants will immediately start into a new growth and active root action will set in.

The pruning of trees and shrubs is something that needs the most careful consideration of the gardener. How often do we see shrubs all cut and butchered into the self-same shape, and, in fact, we can hardly tell until we look closely what the shrubs are. Trees require very little pruning after they have got properly started. All they need is attention, to see that no double leader starts in, or, perhaps, the shortening back of occasional side branches which might make the tree too unshapely. Evergreens require little pruning, but should be given room to develop a free natural growth, which is characteristic of many fine species. Of course, evergreens should have all inner branches, which may become dead, cut out. Special attention to this work among some of the varieties of retinispora should be given. The greater majority of the flowering shrubs will be much better if left to make a natural growth, rather than to be cut to pieces, as already mentioned. All the pruning that needs to be done with such shrubs as the viburnums, cornuses, deutzias, weigelas, ligustrums, etc., is to cut out occasionally any of the older branches, to give an opportunity for new growth; and this pruning may be better done in the summertime or after the plants have passed the blooming season. Of course, there are shrubs that need severe pruning; this may be done in winter. Of this class I have reference to hydrangeas, altheas, etc. Many shrubs should receive attention immediately after flowering in the summer months. If pruning is done in the way of cutting off the old flowers, a second or continuous crop of flowers will be had during the rest of the season. Of this class of shrubs we have several of the spiraeas, as callosa, Bumaldii and salicifolia.

SOME EXPERIENCES IN HYBRIDIZING.

A paper presented by John Cook before the Florists' Club of Washington.

Hybridizing has been carried on by botanists for nearly 200 years, but more for scientific knowledge than for the improvement of flowers, from the florists' standpoint in particular. The first hybrid tea roses were raised by Wm. F. Bennett of England, and the work was rapidly followed up by

German and French rose growers. The first American hybrid tea rose Souvenir of Wootton, was raised by the writer of this article about twenty years ago. It was the outcome of crossing the BonSilene, with Louis Van Houtte. In attempting to recross this rose for several years, I found it had a tendency to reproduce itself, and I abandoned it. Then came Marion Dingee, out of Caserte, a good dark red rose, for out-door purposes, Mrs. Robert Garrett, out of Sombreuil and Caroline Testout. Thousands of seedlings have been raised, some have produced extra fine flowers, but the habit of growth and the production of flowers for commercial purpose, were not up to requirements. I found that by recrossing some of these seedlings having the least faults, we are more apt to get good roses for commercial purposes. I have one now which has the good points for commercial winter work; it is the second generation of my white Madonna and pink Enchanter and has a stronger growth than either of them, a stiff stem and large pink flowers a shade lighter than the Enchanter. Another one which is the outcome of one of my unnamed seedlings crossed with another unnamed one, which had American Beauty blood on the male side, is now ten months old from seed, and has produced during this winter five beautiful shell-pink flowers as large as the American Beauty, with three and four foot stiff stems and foliage larger and handsomer than that of the Beauty. The future only will tell how satisfactory this is going to prove finally.

There are many other recrossed seedlings in sight, of which I will not speak now. The trouble with most of our winter flowering standard varieties is that the organs are imperfect in ninety-nine cases out of a hundred. This is true of the Bride, Bridesmaid and Golden Gate. In red we have good material to work on, such as Richmond, Cardinal and Liberty. The very best in pink is Caroline Testout. Marie Van Houtte, with its strong healthy growth, makes a good seed bearer, also Etoile de France. As this latter rose proved to be too double, I thought of trying for a less double rose, and so I used pollen from Richmond; the result was two seedlings came up, and bloomed for the first time a month ago. One of them was perfectly single, with a more rapid growth than Richmond, and the other one as double as Etoile de France.

I have several seedlings, where the pollen was taken from three and four different varieties mixed together, and they are the richest color in red of any I have ever raised. In most cases, if you cross a white variety with a pink one, the product will be lighter than the parent pink, and if you cross a pink rose with a red one, it will be darker. For the seed bearer I would use the strongest grower, and for the

HARDY ROSES FOR DECORATION DAY

HARDY H. P. ROSES

We offer exceptionally strong two-year-old dormant, low-budded stock (on Manetti), in the following varieties:

Alfred Colomb, carmine.
Anna de Diesbach, bright carmine.
Ball of Snow, pure white.
Baron de Bonstettin, dark crimson shaded.
Baroness Rothschild, satiny pink; extra.
Captain Christy, delicate flesh color.
Duke of Edinburgh, bright vermillion; very fine.
Fisher Holmes, dark rich scarlet.
Frau Karl Druschki, the finest white in existence, \$12.00 per 100.
General Jacqueminot, rich velvety crimson.
General Washington, beautiful red, shaded carmine.
John Hopper, beautiful rose pink.
La France, the finest light pink.
Margaret Dickson, white, pale flesh center.
Magna Charta, clear rose pink.
Mme. Gabriel Luizet, light, satiny pink.
Mme. Plantier, white.
Mrs. John Laing, soft pink; most desirable variety.
Paul Neyron, beautiful dark pink.
Prince Camille de Rohan, velvety crimson.
Ulrich Brunner, cherry red.
Prices on H. P. Roses, \$1.25 per 10; \$11.00 per 100; \$100.00 per 1000.

HYBRID TEA ROSES

Maman Cochet, pink. Strong 2-year-old plants, 10 for \$1.50; \$12.00 per 100.
American Beauty, Clothilde Soupert, Kaiserin Augusta Victoria, Caroline Testout, Hermosa. Strong 2-year-old, \$1.50 per 10; \$12.00 per 100.

THE KILLARNEY ROSE

Irish Grown From the Raiser.

Good strong two year old plants, \$3.00 per 10; \$27.50 per 100.

HARDY ROSE SOLEIL D'OR

(Golden Sun.)

Like Persian Yellow, this variety is perfectly hardy, with large, full, globular flowers, varying in color from gold and orange to reddish gold, shaded with nasturtium-red. Two-year-old budded plants, per 10, \$2.00; per 100, \$15.00.

The Grand New Rose ETOILE DE FRANCE

Superb crimson red velvet, the center of the bloom vivid cerise red. The flowers are very fragrant and last long. This new variety is the result of a cross between Madame Abel Chateau and Fisher Holmes. Field-grown, strong two-year-old plants, \$2.75 per 10; \$25.00 per 100.

AMPELOPSIS, CLIMBERS, Etc.

AMPELOPSIS

AMPELOPSIS VEITCHII (Boston Ivy), extra strong imported vines, three-year-old, \$2.00 per doz.; \$15.00 per 100.
AMPELOPSIS MURALIS, more rapid grower than the foregoing, larger foliage, \$3.00 per doz.; \$20.00 per 100.
QUINQUEFOLIA (American Ivy or Virginia Creeper). Good for covering walls, verandas, or trunks of trees; affords shade quickly, 25c. each; \$2.50 per doz.; \$18.00 per 100.

CLEMATIS

HENRYI, pure white; extra large.
JACKMANI, purple.
ALBA, white.
SIFBOLDII, lavender.
VILLE DE LYON. The finest of all reds; flowers brilliant carmine red. It is equally as good as Mme. Edouard Andre, but contrary to this one, is a very free-growing variety.
All the above Clematis in extra strong plants, \$3.00 per doz.; \$20.00 per 100.
CLEMATIS PANICULATA, strong 2-year-old plants, \$1.25 per doz.; \$12.00 per 100.

HYBRID TEA AND OTHER ROSES OF RECENT INTRODUCTION

(Strong 2-Year-Old Plants.)

BESSIE BROWN. Creamy white, \$1.50 per 10; \$12.00 per 100.
GRUSS AN TEPLITZ. The great new red Rose, closely resembling Liberty in color. No Rose in commerce can compare with Gruss an Teplitz as a bedder, \$1.50 per 10; \$12.00 per 100.
KONIGIN KAROLA (Improved Testout). Magnificent, \$1.50 per 10; \$12.00 per 100.
MRS. SHARMAN CRAWFORD. Deep rosy pink, the outer petals shaded with pale flesh-color, white at base of petals, and distinct from all other Hybrid Perpetual Roses, \$1.50 per 10; \$12.00 per 100.
PERLE DE ROUGES. A polyantha variety of unusual merit. Color velvety crimson, with reflex of petals bright cerise, \$1.50 per 10; \$12.00 per 100.

ENGLISH MOSS ROSES

ASSORTED WHITE, PINK, RED, large dormant plants, from open ground, \$1.50 per 10; \$12.00 per 100.

THE TREE BABY RAMBLER

(Mad. Norbert Levavasseur.)

GROWN AS A STANDARD

The popularity of the Baby Rambler has suggested the growing of it as a TREE or STANDARD. The variety is too well-known for description; enough to say, it retains all its characteristics of free-blooming qualities, etc., 50c. each; \$5.00 per doz.

THE BABY RAMBLER

MME. NORBERT LEVAVASSEUR. Strong field-grown plants, \$1.75 per 10; \$15.00 per 100.

CRIMSON RAMBLER

Large heavy plants, two years old, 3 to 5 feet, \$1.75 per 10; \$15.00 per 100. 4 to 6 feet, \$2.00 per 10; \$18.00 per 100.

The Sensational New Rambler Rose LADY GAY

"A seedling from the popular Crimson Rambler, which it resembles in habit and general effect. The flowers are of a delicate cherry-pink color, which fades to soft white." Strong plants, field-grown, \$3.50 per 10; \$30.00 per 100.

OTHER CLIMBING ROSES OF MERIT

PAUL'S CARMINE PILLAR. One of the most attractive Climbing Roses. Two-year-old, field-grown, \$1.75 per 10; \$15.00 per 100.
MARECHAL NIEL. Color bright rich golden yellow, field-grown, \$1.75 per 10; \$15.00 per 100.
GLOIRE DE DIJON. Color buff, orange center, very sweet-scented, field-grown, \$1.75 per 10; \$15.00 per 100.

ARISTOLOCHIA SIPHO

DUTCHMAN'S PIPE, strong field-grown, \$3.50 per doz.

WISTERIA SINENSIS

Extra strong field-grown plants.
BLUE, \$3.50 per doz.; \$25.00 per 100.
WHITE, \$5.00 per doz.; \$40.00 per 100.

HONEYSUCKLE

Extra strong field-grown plants, 5 feet long, many branches.
COCCINEUM. Scarlet.
HALLIANA. Yellow.
PERICLYMENUM. White.
SEROTINUM BELGICA (Monthly Dutch). Red.
\$3.00 per doz.; \$22.50 per 100.

AZALEA MOLLIS

Most attractive in the shrubbery; also extensively forced on account of the brilliancy of colors. \$5.00 per doz.; \$40.00 per 100. Half specimens, \$7.50 per doz.; \$55.00 per 100.

HYDRANGEA PANICULATA GRANDIFLORA

Two-year-old, 3 to 4 branches, bushy, \$1.50 per doz.; \$10.00 per 100.

pollen bearer, the variety having best color.

It takes four or five months for the seed to ripen; when perfectly ripe, bruise the hips or seed balls and put them in sand, where they will soon rot. As soon as you can, wash the seed out, and sow it at once. It will take from three to ten months for some to come up. You will find that not nearly as many will come up as you have sown. The reason of this is that a great many of the pistils are crooked and twisted, consequently the pollen can't be carried down to the ovula. I always take a little pollen of the seed bearer in order to get as much of its habit as possible, as the pollen sometimes dominates over the seed bearer and you lose exactly what you have been trying to preserve—a strong growing habit. Under glass I fertilize any time, summer or winter. Out-doors in summer you have to do this early, as the pollen on a hot day towards noon gets hard and is worthless. If the pistils have a watery appearance on the surface then it is the time to apply the pollen. If the flower which you wish to fertilize is not quite ready to receive the pollen, you can cut the flower with which you wish to pollenize it, put it in a tumbler of water in a cool shady place and it will keep for two or three days.

Mardner of Germany was the first to give the florists some real good things in the way of azaleas. The first crossing of tuberous rooted begonias was made by Zeith & Sons of London in 1869. Much has been written lately about the pollenation of the pear. My first attempt in this line was about fifteen years ago. I crossed the Dutchess with the Seckel, and the Keifer with the Seckel, carefully pollenized them for two days in succession. As the flowers appear in clusters, I pollenized every one on one cluster. A few days afterward I examined them and found that half of them were dropping off. I had noticed at the beginning that some of the stems that carry the flowers were of a much paler green than others. By close examination I found it was the fault of the stem that supplies the flower with nourishment, and that no amount of pollen would set any fruit. I have experimented for a number of years with the same result. It is only shown by this that the fault of not setting fruit is often put on the wrong side. Plants are capable of forming the fleshy part, shell, case or whatever you may call it, that surrounds the germ or the seed, without any pollen. We get seedless apples and pears, provided the organs that come through the stem are perfect and feed them. My advice to young men is to begin early and study plant anatomy, and physiology. Dissect the flowers and fruit, follow up the organs, see where they start from, and where they go to. Without intimate knowledge of these things we are working in a fog, and by studying them, we are able to gather a few pebbles on the shore of horticultural knowledge.

Prof. T. B. Symons, State entomologist, who has charge of the Maryland State exhibit to the Jamestown Exposition, will be located in the States Exhibit Building, section 5, on the exposition grounds from April 15 to December 1.

SIEBRECHT & SON ROSE HILL NURSERIES
NEW ROCHELLE, N. Y.

SEED TRADE

Seedsmen through the middle West report an exceptionally active trade this spring, and say it is a case of physical endurance whether they can stand the hustle and rush they are called on to face from sixteen to eighteen hours out of every twenty-four until the end of the season. It is certainly a great endurance test that many seedsmen and their employees go through every season, but there seems no remedy for it, and "What can't be cured must be endured."

Burnett Galloway of Syracuse, N. Y., has moved into new quarters on Hanover square. The new store is in a much better location for retail business than the old one, and no doubt Mr. Galloway will improve his opportunities to the fullest extent. By the way, the style of the firm is now The Galloway Seed Co.

James Vicks' Sons say that up to April 1st their catalogue trade had been fully twenty-five per cent. larger than last year, and if April does no better than last they will be able to show a substantial increase. From reports obtainable up to this time it is safe to say that this season as a whole will prove to be one of the best the seed trade has ever had, but there will be abundant opportunity to spend some of the surplus at the convention in N. Y. next June.

If information which has been coming to hand during the past ten days is anywhere near correct, the seedsmen are now called to face the most stupendous failure in the onion seed crop of the past twenty-five years. One firm of growers whose crops are grown on Tyler Island has notified their customers that they will be unable to fill any part of their contract orders, as their crops have been completely destroyed; not only the prospective crop of 1907, but all seeds sown for the raising of roots and seed stock for 1908. This firm reports the entire island under water from four to ten feet in depth. In the Santa Clara Valley the losses will be heavy, and just how much will be saved from the general ruin cannot even be surmised. These conditions apply not only to onion seed, but all biennial

crops, and even annuals are beginning to cause grave concern. For instance, no sweet peas have been planted, at least so far as reported, and a general failure of this crop will mean heavy loss to many dealers. The enormous quantities of sweet peas used annually by the seedsmen of the United States may be inferred from the fact that one firm uses between 20,000 and 30,000 lbs, while many use from 5000 to 10,000 lbs.

Referring to biennials, it may be well to call attention to the danger of the California growers not being able to raise roots for their seed crops of 1908.

Just at the present time there is no market on future onion seed, every one having buttoned up tightly on it. No grower or dealer will offer any at any price. Very recently an order for a few hundred pounds was booked, subject to pro rata delivery, at \$2.00 for Red Wethersfield and Ex. Ey. Red Flat, \$2.25 Southport Red and Yellow Globe, \$2.25 for Yellow Globe Danvers, \$2.00 for Prize Taker, Yellow Dutch and White Portugal and \$2.50 for Southport White Globe, \$1.50 for Australian Brown. Even these prices, which are so high as to stagger the average buyer, may seem low next fall. Indeed, one of the largest dealers and best informed seedsmen in the country informed the writer a few days since that he would not be surprised to see onion seed up to \$4.00 and \$5.00 per lb. next fall, and characterized the situation as "desperate in the extreme." Every pound of onion seed carried over will be like money at interest, as it will, no doubt, double in value by next January.

Some anxiety is felt about the prospective Lima bean crop. It is about time those beans were planted, but as the rains have continued with unabated zeal, no planting has been done, and in any event the crop will be late. Fears for the failure of this crop have been reflected in the sharp advance of commercial Limas during the past two weeks. All in all, the situation is by far the most gloomy the seedsmen have ever had to meet, and this is the result in great measure of the absolute concentration of certain crops in one locality.

Something will be said on this subject in HORTICULTURE'S future

"Seed Trade Notes." In meantime, measures have been taken to secure reliable information as to crop conditions not only in California, but in a general way, and this will be furnished to readers of HORTICULTURE from week to week.

CATALOGUES RECEIVED.

The catalogue of Arthur T. Boddington contains one of the most remarkable lists of novelties ever offered. Among them are Meconopsis integrifolia, Primula Kewensis, Lobelia Tennior, Mediola asparagoides myrtifolia, Cheiranthus Kewensis, Coleus thyrsoides, Nigella Miss Jekyl and Trachelium caeruleum. Two of the above mentioned have been illustrated by colored plates issued as supplements to HORTICULTURE. Mr. Boddington also offers as a specialty this season bulbs of Gloriosa superbum which every local florist should grow as a sensational attraction for the public to whom, as a rule, this handsome flower is unknown.

In the annual report of the Connecticut Agricultural College it is stated that 1,180 students have been connected with the college for longer or shorter periods. President Stimson summarizes the four greatest needs as: an annual appropriation of \$25,000; \$2,500 for sewage disposal plant; \$8,500 for purchase of Valentine farm; \$50,000 to construct a horticultural building and greenhouses.

POT CULTURE OF CARNATIONS.

(Read Before the Morris Co. Gardeners' and Florists' Society, Madison, N. J., Mar. 13, 1907, by Wm. Duckham.)

What I can say regarding the culture of carnations must necessarily be short, for the reason that I am requested to speak on the method of pot culture only. I do not wish it to be understood that because I have followed pot culture for the past eleven years that it is the best, or that it is better than outside or field culture, but suffice it to say, I have had fair results, which undoubtedly has led me to continue the practice. Our cuttings are taken at the usual time, which is as soon as they can be procured after the middle of January, rooted in the usual way, and as soon as rooted, are then potted into 2 1-2 in. pots, grown along, but not forced, until the pots are well filled with roots. They are then re-potted into 4 to 4 1-2 in. pots. Our plants are just being shifted into the above sizes, in which they will remain until time to plant into the bench. I endeavor to have all the plants pinched once before potting into the larger pots, and that the plant is again active and starting a number of growths. Careful watering and the usual requirements are all that is necessary now, until final quarters are reached.

About the first week in June our plants have usually been planted, at which time the pots have become filled with roots, and it becomes a necessity to re-pot or plant. Inasmuch as the usual greenhouse bench will not hold any larger pot than 4 1-2 in., planting is in order. I would prefer to plant earlier than the date given, rather than allow the plants to suffer. After planting, great care must be used for a week or two regarding watering. This is most essential, for with so much soil, if watered too freely the whole is likely to get soured. After the plants get hold of the new soil plenty of water must necessarily be given, together with frequent syringing, which will encourage growth, and also help to keep down red spider, which must be looked out for at all times.

Now, what are the advantages of pot culture over field or outside? In the first place, perhaps I might cite that last year out of 700 plants, all that were lost were two plants from stem rot. On the other hand, plants from

the field would invariably show a greater loss than this, especially in wet seasons. In fact, I have seen big losses, and undoubtedly you have seen the same, but never so with plants grown inside.

I might claim, too, that indoor-grown plants produce larger flowers with longer stems, at an earlier date in the fall, and taking the average through, I believe this applies for the whole winter. As stated before, I do not wish to infer that my method herein stated is the better way. That would be absurd on my part, for we have only to look around at the exhibits here tonight and perhaps I would be safe in saying there's not one of the flowers here but what was produced by the field or outside culture, with the possible exception of the few that I have brought. With a good house, good soil and a little common sense, excellent carnations can be produced from either inside or outside culture.

DAHLIAS.

Green Plants vs. Field Roots.

I find that some of the small growers who only devote a small part of their time to the growth and culture of the dahlia, are trying to make the general public believe that the green plant is much better than a strong field-root would be to grow, but this is not so in this country, as we have so many insect-pests and cut worms to contend with. If a green plant is cut off it is lost entirely, but it is not so with a field-grown tuber, for if the grub or cut worm cuts the sprout off of a hardy field tuber it only puts it back a week or so and when it grows again it will have two sprouts in place of one. In some foreign countries where they recommend and sell mostly green plants they are not pested with these insects. In regard to the green plants flowering, it is impossible for them to flower any more freely than a hardy divided field tuber, if the tuber is properly planted. If six inches deep and laid horizontally and kept thoroughly cultivated the tuber will flower as freely as any green plant ever produced and the clumps from a tuber will winter much easier than those from a cutting. The cutting is only fit for a commercial grower who wishes to work up a stock quickly, and can afford to lose a certain per cent. of them, in order to gain his stock. But this is not wise for amateurs for if any amateur pays for a cutting and loses it, it is a total loss to him. The commercial

dealer figures on losing a certain per cent. of all cutting stock. Cuttings can be raised for one-fourth the cost of strong field tubers and are sold by most dealers for the same price as strong tubers. This is the principal reason why some of the small dealers are trying to force the cutting, finding there is a greater profit in selling this class of stock. I have been a commercial grower for over twelve years, and have experimented with all methods of growing the dahlia, and I find that the tuber gives the greatest satisfaction.

J. K. ALEXANDER.

East Bridgewater, Mass.

OBITUARY.

John P. Murphy of Saco, Me., died on April 1, aged 67 years.

F. L. Temple, a nurseryman well known in Massachusetts and Maine, died on March 30 at his home in Hampden, Me.

C. A. Reed, for the past five years in the florist business in Brockton, Mass., died on March 25, at the age of 40. A widow and two children survive him.

Quincy L. Reed, 85 years of age, member of the state board of agriculture, died at his home in South Weymouth, Mass., on April 9. One son and two daughters survive him.

Patrick Cavanaugh and his wife were asphyxiated in their room in Brooklyn, N. Y., on April 6. He designed and laid out the grounds for the estate of William Rockefeller in the Adirondacks and also the country estate of Timothy Woodruff.

Henry McGrady, of Newton Centre, Mass., while digging a trench for a water pipe in the rear of his house on April 6, was buried by the sand which caved in from the sides. His position was accidentally discovered by his sister, Nellie, who, with the assistance of two neighbors, dug through and rescued him. He was breathing when taken out, but soon died. Mr. McGrady was 37 years old, and had been associated in the florist business with his father for many years.

George Leadley of Detroit, who was burned out just a week before Easter, could not locate himself for the holiday trade. It is his intention not to go in business again until fall.

News Notes

The Morgan Floral Co. has leased the houses of W. B. Conover, Henderson, Ky.

Benjamin Carpenter will soon open a flower and seed store on Water street, Wilkesbarre, Pa.

Holm & Olsen of St. Paul, Minn., gave a reception in their new store on the evening of March 28, and an orchestra furnished music.

F. E. Conine has purchased a large farm which will be devoted to the interests of the F. E. Conine Nursery Company's growing business at Stratford, Conn.

The florists of Fort Wayne, Ind., were serious sufferers by the hailstorm of March 27, Miss Flick, William Meyer, A. J. Lantineer, S. Bash & Co., being among those reported to have lost considerable glass.

Thomas A. Norris and Martin Dolan, of Brockton, Mass., have purchased the Lapham farm, in Bridgewater, which has until recently been in the hands of the Shady Hill Nursery Co. The estate includes 100 acres, and is well stocked with trees and shrubs.

In the Sheriff Street market, Cleveland, O., the twelfth Easter flower show opened on March 29. Among the exhibitors were Mrs. A. Schmidt, L. Utzinger, John Mollenkopf, Fred Burger, R. Gamble, G. M. Nauman and C. Aul. Three cash prizes were offered for the best display. Johnston's orchestra furnished music day and evening.

The Fifth Avenue Floral Co., Columbus, O., have recently purchased a large tract of land on Seventh avenue. Their plans include the erection of additional greenhouses and improvements in their present plant. The newly elected officers are C. K. Siebert, president; T. B. Siebert, general manager; G. H. Woodrow, secretary and treasurer.

BUSINESS CHANGES.

Miss H. F. Patten has purchased the business of C. B. Flick, Toledo, O.

The Kennicott Bros. Co., Chicago, have moved to 48-50 Wabash avenue.

M. F. Monohan has leased the Phelps greenhouse at Blackinton, Mass.

David Lumsden of Waverley, Mass., has resigned his position with the Wm. W. Edgar Co. and will establish himself in the near future in the wholesale line, making palms, ferns, and decorative plants leading specialties. The new establishment will be in the close vicinity of Boston.

CUT FLOWER MARKET REPORTS

BOSTON If anything, the market is worse than it was last week. There is certainly no improvement apparent. Although the very inclement weather has shortened up the supply of flowers generally the markets have gained nothing as conditions are such that the street men can do nothing to unload the surplus, as they would if the crowds were out. Out-of-town trade has held up much better than the city trade and has proved a valuable asset to the shippers who, otherwise, would lose the larger part of their stock. Quality holds good on about everything, especially roses which have never been better at this season of the year. Violets have improved and taken a second lease on life, under the wintry weather. Carnations and lilies are abundant, with the latter badly congested.

BUFFALO The after-Easter deluge began on Monday last and continued throughout the week, the weather being much the cause. Up to Friday there was an oversupply on stock such as has not been seen in many days. Lilies and callas were in heavy supply with no outlook. Carnations are being carried along from day to day, but the outlet did not come until Saturday, when bargains were in order and a good lot of carried-over stock was cleaned up. Roses were also plentiful, the quantity being good, but they took the same course as the rest. Lily of the valley, peas and other stock suffered also. Violets sold considerably better, the quality being good. This week the trade has started in much better and prospects look bright for good business.

COLUMBUS The past week we have been feeling the usual after effects of a great Easter business. Violets are at last being received in good quality, but are selling very low. Roses are fine in quality. Richmond is having and has had right along a great run. Carnations are better this week than for a long time. We are getting very much disgusted with the large amount of "pickled" stock that many try to work upon us. Bulb stock is now drawing to an end, and no one is sorry, as such enormous quantities of it as we have had lately are very hard to handle with satisfaction to either grower or customer. Considering everything, trade is in a good healthy condition, and all are well satisfied.

DETROIT To size the Easter situation up it was much beyond all expectations. Everybody was exhausted by Monday morning and many closed their shops at noon. The most elaborate preparations for delivering goods were in most cases found to be below the requirements. The grower probably did not fare as well as the retailer. The

warm weather just previous to Easter brought the stock on too fast and lilies were very soft and easily spoiled; bulbous stock was also over plentiful. A heavy crop of roses and carnations all around falling due for Easter made matters appear unpropitious for a while. To the surprise of all everything cleaned up well. There being plenty of stock on hand every retailer procured a good supply and, although prices kept up well, the consumer meeting a large display everywhere felt more inclined to buy liberally. Plants and cut flowers and especially fancy baskets went very well. At the present supply is above the demand although there is no real stagnation in the business. Something doing all around.

INDIANAPOLIS The volume of Easter business exceeded anything in the previous history of the Indianapolis market but the aggregate money value of sales for the week does not make a larger if as large a sum as in 1906. The Easter weather was all that could be desired but the warm weather for the two preceding weeks brought out all the bulb flowers too soon, some growers losing two-thirds of their stock. There was abundance of everything in the cut flower line except lilies and violets. Violets were of poor quality and limited quantity. Lilies ran very low; the greater part of the trade was unable to get them. The best buyers chose flowering plants in preference to cut flowers particularly the higher grades. There was a noticeable increase in plant sales this year although an immense amount of cut stock was handled Saturday and Sunday.

NEW YORK Conditions since Easter have been very perplexing to the wholesale dealers. The general demand has been far below normal, while the shipments from the growing districts have been enormous, and values have been battered down to the lowest peg by the dealers who are in full control of the situation for the time being. Lilies that failed to reach the goal for Easter are being received in huge quantities, most of them bearing evidence of the pace they were put to in the futile endeavor to get them out on time. Roses seem to be doing their best to average up on the short crops that prevailed throughout the winter. All bulbous material is badly congested, none more so than lily of the valley, which is a burden on the hands of all the wholesalers. Retail trade is very dull, and April has, thus far, failed to come up to its reputation as a profitable month. With a lively demand at the present time, the retailers could make some money with the opportunity for buying material so cheaply.

PHILADELPHIA The market on cut flowers was very slow last week. There was an extra demand for sweet peas, with supply ample. Roses and carnations 'steen times as many as wanted. Lily of the valley sold a little better, but still long. Cut lilies sold fairly well; arrivals and enquiries about equal. There are a few good double violets coming in yet, but the singles are nearly over. In orchids, there is little of consequence except a few good cattleyas which find ready takers. Far too many daffodils and poeticus from the South. A new item is the golden Spanish iris. On the whole, however, there were but few bright glints to relieve the gloom of the situation. The April weddings that were counted on to make things hum came along all right, but they were entirely inadequate to prevent the general slump.

TWIN CITIES Trade since Easter week has been exceptionally quiet; even the larger stores have done practically nothing. The opening of the new city Auditorium in St. Paul created some demand, but it seemed to run more on violets than anything else. Stock is plentiful, especially roses, which are quoted very low. Carnations are in abundance, but for some reason the price has not declined to any extent. Bulb stock is on the wane. Violets are also about through, and those that are now offered are very light colored. About every dealer has on hand a number of Easter plants; in one place from 100 to 150 fine lily plants were carried over; there are also some fine specimen azalea plants, but all other Easter stock sold to good advantage.

NEWPORT'S EASTER MARKET.

Easter business was on the whole very satisfactory. Of course it would have been much more so if lilies had been in proper condition in greater numbers, but even as it was I do not think any grumbling is at all justifiable in view of all the facts. In nearly all the stores there were many lilies that might be supposed would remain there for the prolonged decoration of the stores, but they didn't; every one of them found a purchaser because better could not be had at any price. Azaleas, deutzias and spireas sold fairly well at usual prices. Genistas in 8-in. pots were in good demand. Hydrangeas, H. P. roses, and acacias sold well at good prices. Baby Ramblers and Crimson Ramblers were favorites in about equal degree. Dorothy Perkins was picked up quickly. White hyacinths took the place of lilies when the latter disappeared from view. Cut flowers were in such demand that on Saturday evening there was nothing in that line left.

NEWS NOTES.

Bertha Cohn of 17 E. 59th street, New York, has filed a petition in bankruptcy. Liabilities, \$4,180; assets, \$20.

Mrs. Josephine Joslyn, 2603 Broadway, New York, has gone into bankruptcy with liabilities \$2,512, and assets \$517. New York Cut Flower Company, \$371, is one of the principal creditors.

J. K. Allen is preparing to erect a large refrigerator for the reception of flowers in the basement of his establishment at 106 West 28th street, New York. The refrigerator will be 16 1-2 feet long and 6 1-2 feet deep.

Walter Taepke, who manages his father's store on Gratiot avenue, is a representative of the younger generation of Detroit florists who are building up a good business on the one-price principle. Many an old hand at the business may well take time to consider the opportunities lost by cutting prices as they witness the success of the newer methods.

FIRE RECORD.

Slight fire in greenhouse of Stephen Murphy, Middleboro, Mass., on March 28. But little damage done.

Simon Lachman, 16 Wilcox street, Detroit, Mich., suffered heavy loss from fire on the night of March 27. Cause unknown.

A blaze started in the boiler room of the greenhouse owned by Hermann Hoffman, Irvington, N. J., on March 30, but was soon extinguished with a loss of not over \$100.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—A Foreman for an eastern establishment. Married man preferred, as good house is provided. Must be a good all-round grower of Roses and Carnations and Mums, etc., and of strictly sober habits. No other need apply. State experience, with references, and full particulars, to No. 9, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED AT ONCE—A sober and energetic young man with knowledge of pruning, planting, etc., to assist in general landscape work. Apply in person or by mail with reference to A. Van Leeuwen, Jr., 3 Wexford Rd., Worcester, Mass.

WANTED—Man for general greenhouse work on place of 12,000 feet. Must be good grower of carnations, mums, violets and general stock. Married man preferred. W. W., care HORTICULTURE, Boston.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B, care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

HORTICULTURAL SITUATION WANTED—Long experience in orchids, palms and exotic plants; been 5 years in tropical country, understand gardening in general. Now at a well-known flower nursery of N. Y. State. Will give best of references in every detail. Private place preferred. Address D. A., Box 303, Ossining, N. Y.

BUSINESS CHANCES

WANTED—A partner for a good wholesale and retail florist business near Boston. Must furnish some capital and be of good character. Address L. G., care HORTICULTURE, 11 Hamilton Place, Boston.

MISCELLANEOUS

WANTED—To buy or exchange for any other stock, old plants of Aspidistras, both green and variegated. Siebrecht & Son, 425 Fifth Ave., New York City.

FOR SALE

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 85 Erie St., Chicago.

FOR SALE.

Greenhouse fifty by fifteen; a bargain if taken before June. 618 South St., Quincy, Mass.

FOR SALE—An old established business, greenhouses and stock. Allison-Pope Co. By Victor L. Littig, Receiver, Davenport, Iowa.

BARGAINS: Two five-foot horizontal tubular boiler couplets; good condition; were running at ninety pounds. Address G. S. Ramsburg, Somersworth, N. H.

YOU PAY A HIGH MARKET PRICE FOR TROUBLE

when you buy all-cypress greenhouse materials. You know—everybody knows—that the best all-cypress house made has but a short life, and when you hear men talk and advertisers blow about how long such and such a house lasted, there's nothing said about the heavy repair bills, the bills that you and I know certainly had to be met. Then what's the use of arguing the matter when the Iron Frame House is the only house that stands time's test. Write us at once for information, but do it *now*—tomorrow you'll have still less time.

Right Palm House Construction and Arrangement

For years we have been doing our best to convince owners and their gardeners or superintendents that the usual treatment of the palm house with the entrance on the ground level, results in a loss of effect, turning the possible beauties that belong to the palm house, into a regular store room. A cluttered, jammed full proposition. Now, enter this house from a raised vestibule and look *down* on and *through* this luxuriance, and the whole thing is transformed into one of delightful interest and a reward to the gardener for his work. These raised vestibules are then also an

incentive to overcome the arbitrary arrangement of the walks by breaking up their straight lines. This interior of the Soldiers' Home at Washington, D. C., is a splendid example of our treatment; even from this point of view looking toward the vestibule, it is most attractive. There's a good deal more to be said, but it's more satisfactory to correspond with you, or talk it over at our office—better do both. Lord & Burnham Co., Greenhouse Designers and Manufacturers, New York Offices, 1133 Broadway, corner 26th St., N. Y. Boston Branch: 819 Tremont Building. Philadelphia Branch: 1235 Filbert Street.

THE first rot out on the ordinary house comes at the eave line, the place where the condensation settles into the joints—the U-Bar house has no eave joints—the curved eave does away with

them all. Then the

U-Bar construction is not only the lightest but freest from joints to decay. Send for catalog. Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Building, Fourth Avenue and Twenty-third Street, New York.

CARNATION WINSOR

We have not advertised Winsor until now because we have not had to. It is so good and its merits have been so generally recognized that it has practically sold itself. Our advance orders were very large, and we did not feel the necessity of advertising it until we were in a position to fill and take care of our early orders. We are now nearly caught up with our advance orders and have a fine lot of stock on the cutting bench, so that we can promise prompt delivery on orders received from now on.

If you have not already purchased a stock of this, you should lose no time doing so. We have sold more Winsor than has ever been sold of any novelty that has ever been put on the market. Its merits and value are now so well established that one is not buying a chance. We are cutting and shipping right along between one and two thousand flowers a day to the New York market, where our flowers are sold.

There is nothing on the market that approaches Winsor to-day in carnations. It is the best seller on the market, on account of its lovely color, fine stem, perfect calyx, and fine keeping and shipping qualities—in fact, in this regard it covers every necessary requisite as a market variety.

From a growing standpoint, it leaves little to be desired. It is usually healthy, very vigorous and productive, and, we think, the most profitable carnation ever introduced. This may seem high praise for a carnation, but it is no exaggeration. Winsor gives a large percentage of high-quality flowers. It practically does not split at all. Notwithstanding the fact that we have had the darkest, duldest winter we have ever had, when the Enchantress and Lawson types are splitting badly all over the country with every one, we have not had one-half of one per cent. of split calyxes on Winsor—in fact, we seldom see a split calyx. Hundreds of visitors who have been at our Scarborough place will substantiate this statement, extravagant as it may appear.

Any one who fails to plant Winsor this year will regret it. Rose Pink Enchantress is good, and a good many other varieties are good, but **IF YOU WANT THE WINNER, PLANT WINSOR.**

STRONG ROOTED CUTTINGS, \$12.00 per 100, \$100.00 per 1,000.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Law-on. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—P. odigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

THE H. WEBER & SONS CO., Oakland, Md.

Winter and Summer

The two beautiful pictures showing the contrasts of the December and June landscape, herewith published, were taken on the grounds of Mr. F. S. Moseley of Newburyport, Mass., justly famed as one of the finest private estates of New England. At the present transition period although all are yearning for the tardy spring to assume its sway and everybody has had a surfeit of wintry conditions in the unprecedentedly long and severe season through which we have passed, yet none

will be insensible to the charm of this picture of winter scenery with its snow-clad trees. The contrasting view showing the rose garden of hybrid perpetuals and pergola adorned with hardy climbing roses speaks for itself. In no line of garden material has greater advancement been made in recent years than in that of hardy rambling roses. The dealer or planter makes no mistake in stocking up, especially on the new varieties. Our Buyers' Directory tells you where the right sorts may be procured.

Ornamental Conifers

(Continued.)

CUPRESSINEAE

The Cupressus, which gave the name to this tribe, comprises nearly all natives from California and Asia. None of them are really hardy in New England. Those that may succeed in good sheltered situations as far north as Connecticut are: *Cupressus Lawsoniana* from California which is a very elegant tree in some of its many forms. It is one of the conifers which gives the greatest number of variations in the seed beds. Some have the top of their shoots pendant, or thread-like, of very graceful effect. Some grow erect, narrow and compact of different shades of green, blue, yellow or variegated in color. The blue and dark green colored seem to be the hardiest. We have a few good ones which have stood severe winters.

C. Nutkaensis or *Thuyopsis borealis*, the Nutka Sound cypress, resembles much *Lawsoniana* in its form and way of growing, but is coarser and the branchlets at the upper branches are more pendant. There are a few good pendulous, glaucous and variegated forms of it in cultivation.

C. thuyoides, the white cedar comes from the southeastern States where it grows in swamps in company with bald cypress; it is a thin growing little tree with erect, short, string-like shoots of not much ornamental value. There is a yellow variegated form which is quite effective.

C. leptoclada, or *spheroidea Andelyensis*, and *C. ericoides*, which are said to be forms of *thuyoides*, are two nice, compact, pyramidal-growing little trees, both have heather-like foliage and may be grown in the corner

of a wall or building or other natural shelter from north winds.

Retinospora—also called *Cupressus*, *Thuya* or *Chamaecyparis*—*obtusa* and *pisifera*, are both from Japan where they are grown for their valuable timber. They are good, hardy trees and in good deep soil they soon grow to a nice size, spreading, pyramidal in form, well furnished with branches, and they are very effective on large lawns. *Obtusa* has the needles flattened along the shoots and is glossy, while *pisifera* has them more open and pointed; both have produced many interesting forms from sports. The tendency of the *retinosporas* to sport is shown in the way these varieties are grown in a dwarfed form in Japan; these same forms when given good growing conditions here often sport back to the type. I never saw any new forms coming from seeds; the result has always been that when seed germinated it proved to be identical to the seed bearer or type. It is from the above mentioned sports that the Japanese grow those little trees reputed to be a hundred or more years old with which they tax our credulity.

Among the form of *R. obtusa* are: *R. o. compacta*, which grows to a big round compact form, is of a glossy green color and makes beautiful specimens. *R. o. aurea* is like the type, of more compact habit of a good yellow color which is more accentuated in the spring in growing time. *R. o. nana*, the "chibo hiba" of the Japanese, is a nice little tree with short compressed growth; a good plant for big rockeries. If given too much root space they often degenerate. *R. o. nana gracilis*, the same as the preceding with finer and shorter growth. There is a white variegated form of these two last named ones.

but they are not very constant. *R. o. nana aurea* has the same habit with longer growths and is yellow in color. *R. o. pygmea* is of a dwarf spreading habit with flat shoots. *R. o. Mariesii*, of erect habit, has the tips of the shoots creamy white. *R. o. filicoides* has the shoots long, narrow and flat and fern-like. *R. o. filicoides aurea* (*tetragona aurea*) similar in growth, but has shorter shoots; plant very compact, of a nice golden color which burns easily on the sunny side. *R. o. lycopodioides* has thick, round shoots irregularly set, the tops sometimes flattened like a cock's comb. *R. o. filifera* has long, thin, cord-like glossy pendulous shoots. We have some more obtusa forms, unnamed, from selected sports which are quite interesting; all very dwarf. All these obtusa forms are of good effect in big rockeries where they keep their character the best.

Fruit Topics

CULTURE UNDER GLASS

If there is one branch of horticulture more than another that requires painstaking effort and constant application to ensure success it is the growing of fruit under glass. Grapes are in particular grossly absorbing in their demands on the vigilance of the grower and they are not contented with monopolizing the time of their attendant for a certain limited time but insist upon being nursed from the time the first drop of water reaches the roots until they are en route to tickle some appreciative, and oftentimes unappreciative, palate.

Many growers nowadays are unfavorable to syringing overhead after the grapes are in flower contending that cleaner fruit results from moisture being furnished solely by evaporation and humidity, in which contention there may and doubtless is a great deal of soundness, still most growers would find it exceedingly difficult to keep down the pests almost inseparable from grapes without the aid of water applied with force to the foliage almost continuously except at the interval of bloom, and terminating only when the berries show color.

Large berries are more enviable than large bunches and in order to have large berries the bunches require to be well trimmed at the start. A second trimming may be necessary but so much the better if at first the work was so fearlessly done that the troublesome second going over will not be needed. It is undoubtedly injurious to grapes at trimming time to bring the hands (which invariably perspire during the operation) in contact with them; better have a piece of raffia attached to the shoulders of the bunches which will effectually hold them in the desired position long enough for the operation. Heavy cropping will in a few years, if persisted in, unfailingly ruin grape vines. A fair crop with fair sized bunches of large well-colored berries of good flavor is much more satisfactory than abnormal crops for a year or two with the inevitable failures following in successive years.

Peaches and nectarines indoors are much the same as grapes in the matter of over cropping. Large fruit of excellent flavor can only be expected when trimming has been attended to and at the proper time. Another important requisite in the cultivation of peaches and nectarines is the careful tying-in of the wood at all times, and dispensing with everything superfluous in order that

the fruit may be the better nourished and receive all the light possible.

OUTDOOR CULTURE ON TRELLISES.

The above remarks hold good in like manner with the same kinds of fruit grown outdoors, especially on trees trained upon trellises or on walls. The little extra labor necessary for this work will be more than paid for by the quality and size of the fruit resulting. There are many varieties of peaches suitable for that kind of cultivation outdoors, which, if they only received the treatment recommended here would yield fruit in no way inferior to that grown under glass.

Another consideration is the improved appearance of the trees when they are neatly kept in order by training and subsequent attention in the manner already indicated. It is not a matter of much cost to erect a trellis or stretch wires substantially along a brick or even a wooden building. After this is done trees can be purchased very reasonably either trained or otherwise; trained trees are preferable because the material for a start is already there without the need of an experienced hand to put them in proper shape. In a year or two these trees will grow and look better than most vines would, with the added consideration of an abundance of good fruit.

David McIntosh.

Our Colored Supplement

ALLINGTON PIPPIN.

None of the newer English apples have become popular so quickly as the variety Allington Pippin, represented on the accompanying colored illustration. It was introduced for public sale in 1896 and so far an apple is still to be classed among the newer ones. Now it is largely grown both for market sale and in private gardens. It is a handsome fruit and has many good qualities. It makes a neat orchard standard and does splendidly upon the Paradise stock either as a bush or cordon or other trained form. It bears fruit so freely that the latter have to be thinned, although not too much or the fruits become too large for dessert. It is in season longer than Cox's Orange Pippin and may be considered as one of the finest sorts ever sent out. The flesh is firm, of a pale primrose color, and the flavor is rich, resembling that of Golden Reinette. The fruit is in season from November to February.

Allington Pippin was first shown before the fruit committee of the Royal Horticultural Society in November, 1894, under the name of South Lincoln Pippin. This was awarded a first-class certificate and the stock was purchased by Geo. Bunyard & Co. As there were already other apples identified with the name of Lincolnshire they renamed it Allington Pippin. Year by year it has increased in popularity because of its free bearing, healthy growth and fine flavor. No parentage has been traced but it is thought to be a cross between the Golden Reinette and Cox's Orange Pippin. In growth it is larger in all its parts than Cox's Orange Pippin. Market growers are planting it by thousands and it will probably oust the old King of the Pippins from popular favor for it is in season at the same time.

Harry H. Thomas

Roses Under Glass

IV.

At this season, when the work of potting is in full swing, and the young stock demands so much attention, the old plants so long as they appear to be in good health are frequently neglected, and in a measure left to take care of themselves, the necessary cutting and watering being, perhaps, the only attention they receive.

Proper attention to training, so that each flower stem may be kept in an upright position, and as fully exposed to the light and air as is possible, will result in a larger cut of high-grade blooms. Neglect in this respect is conducive to the production of weak, spindling wood, which, if it does not come blind, will produce weak necks, and in these days of improved cultural methods, this class of roses is becoming less marketable. To secure a stem with as few defects as possible and bearing a well-developed bud, will necessitate the removal of lateral shoots while they are young and soft. If allowed to remain on the stem until they have become hard and woody, the laterals have by that time used a considerable amount of the nourishment which should properly have gone to develop the bud. The stem also will be crooked, which spoils its appearance and detracts from its value.

Cleanliness and pure air are essential to the health of the plants, and in order to effect as nearly as possible these desirable conditions, the ground under the benches and the walks must be kept as free of weeds and decomposing matter as the soil on the benches. Weeds form an ideal shelter for thrips, red spider, etc., and if we expect to keep these pests in subjection, weeds must be rigidly excluded.

As the season advances and the increase in the duration of sunshine from day to day becomes more perceptible, the plants will require a greater supply of water. The soil on the ends of the benches and along the sides usually dries out quicker than the rest of the bench. These places should be gone over carefully as soon as they show signs of drying, as, when once allowed to bake and crack open it is very difficult, one might say impossible, to get the soil wet again.

Liquid manure may now be applied to healthy stock, more frequently, adding to its strength as necessity requires. Before treatment, however, all the dry places on the bench should be watered with clean water, otherwise the plants situated in the dry soil will take up more of the liquid manure than they can use. As a result they will sicken and perhaps not recover sufficiently to be of further value during the rest of the season. Ventilation can also be given more freely and advantage should be taken of every bright day to admit plenty of fresh air. While this is being practiced it is well to observe and guard against sudden and extreme fluctuations of temperature as this is a fertile source of mildew. Abrupt changes also are very injurious to the young tender growth, causing checks which often result in malformed buds (especially does this apply to Beauty crops) and when once started, it is extremely difficult to bring them back to normal condition. The houses should be fumigated at least once a week, as, at this season green-fly multiplies with astonishing rapidity, and procrastination will result in the appearance of hosts of this pest, which will add greatly to our troubles, and call for strenuous efforts to again get them under subjection. Mildew also is a source of worry to the grower and frequent painting of the heating pipes with

a paste composed of sulphur two parts and lime one part, reduced to the consistency of paint, will be necessary to keep this in check. When the weather becomes too warm for this method to be longer practicable, the above mixture in powdered form may be applied to the plants by means of a powder blower, allowing it to remain twenty-four hours before syringing again.

J. E. Simpson

Pruning the Vineyard

The method of pruning will depend a good deal upon the ideas of the grower and on the manner of growth of the vines, whether vigorous or weakly. Many weak kinds are grown to stumps and pruned back to these every year. Others require support, and with these a certain amount of training is necessary.

With the former kind little is required other than to cut back the more vigorous growths to four or five buds and to thin out the weaker shoots.

Grapes are carried on the new wood of the present year's growth, the first five or six buds each giving rise to a fruit cluster. This means that if the vine is cut to twenty buds it will give sufficient chance for seventy-five or more clusters. Hence one can easily see how necessary is vigorous pruning to avoid overtaxing the vine. This is a point too often overlooked in pruning small home vineyards, and as a result the vines are overworked, becoming practically barren in a couple of years. How many buds can be left depends on the strength of the soil, the style of training, the climate, age of the vine, and its present condition, whether neglected or cared for in previous years.

With vines grown on trellises or other supports a number of methods of pruning have been evolved. The two most important are the renewal and the spur. The first, the renewal system, consists in providing a fresh supply of wood each year to bear the next crop. This is done by growing two sets of canes, one set being sacrificed each year and replaced the succeeding season. If the vine is grown to four canes, two are kept to bear fruit and two are cut back during the winter pruning. When growth starts the fruit is borne on the shoots coming from buds on the canes of the previous season's growth, while two new shoots are grown from the stubs of the severed ones. In this way there are always vigorous one-year-old canes for fruit and the basis for the next year's bearing wood.

The second system, the spur, consists in growing each vine to two or four arms and training these horizontally along a support. From the arms laterals are developed at frequent intervals and the fruit is grown on these. When winter-pruned, the laterals are cut back to three or four buds and one new cane grown from each of these to replace the old one. This cane is again cut back the second season, and the operation repeated annually. As the old arms become knotted and show signs of giving out the two canes nearest the centre are allowed to remain and at the subsequent pruning are trained to take the place of the old arms, removed.

In the majority of cases vigorous pruning and a generous fertilizing will work wonders, unless the vineyard is so old that replanting is the only recourse.

COLORED PLATE WITH THIS ISSUE

The
Rose Society's
big problem

The fact that the American Rose Society has not been able, as yet, to put in operation any successful plan for uniting the amateur and trade interests under its banner should

neither surprise nor discourage the true friends of the society. He who shall evolve a way whereby this desirable end may be attained will certainly merit the deep gratitude of every one who grows a rose either under glass or in the open garden. To enlist the public in any general movement of this kind is not a simple matter and should the popular enthusiasm ever be awakened on behalf of a national rose organization it will undoubtedly be by the employment of very different methods from those that have proved effectual in the upbuilding of our professional bodies. At the present time it is manifestly the wisest plan for the

American Rose Society to adhere to the course on which it is now well started, making sure to retain and, if possible, increase the active support of the professional rosarians and, while thus strengthening its foundations, watch out for possible ways and means whereby the amateur may be brought into the fold and a practical solution found for that hoary old problem of how to perfect an efficient alliance of the masses, the classes, and the profession.

Phases of the flower trade

Reports from the principal markets indicate the existence of an unmanageable surplus of most kinds of cut flowers ever since Easter, with the unfortunate accompaniment of a very light demand instead of the brisk call that April was expected to usher in. So far as bulbous flowers, lily of the valley, etc., are concerned the over-supply might have been avoided by a less liberal planting of the bulbs by the growers, and the avalanche of belated Easter lilies can fairly be attributed to the unforeseen inclement weather during the last stages of their growth. In the case of roses, violets and carnations, however, it is to be expected that an unavoidable over-production will be in evidence every spring, as plantings are made with a view to meeting the market requirements during the dead of winter when crops are produced but sparingly and the more scanty the winter production the heavier will the spring cut be. So a practicable remedy cannot be presented. One feature of the situation is noteworthy in passing. The American Beauty after an almost complete absence for two or three months finds now, on its return in abundance, the market practically turning its back on it. Unable to get this rose when wanted the buyer seems to have taken up with other favorites, such roses as Killarney, Wellesley and Richmond having benefitted by the situation and Richmond especially intrenched itself with a hold that bodes ill for the prestige of the American Beauty next season.

Training for landscape work

The course in landscape gardening study for members of the Gardeners' and Florists' Club of Boston has come to a close for this season. The experiment appears to have been successful in all respects and the result of this regular study of the fundamentals of landscape gardening practice by half a hundred young gardeners cannot but raise the standard of gardening work wherever their influence extends. A thorough knowledge of plant culture is a splendid qualification for anyone aspiring to attain eminence in landscape work and he who lacks this is seriously handicapped but a sound knowledge of the composition of forms and their effect in landscape scenery and the practical handling of the materials required can never be acquired through the ordinary routine of greenhouse or nursery work. On the other hand a life time devoted to the study of rules and principles will avail little if refined taste and an artistic appreciation of what is beautiful and inspiring and fitting in landscape scenery be lacking in the individual. This indispensable attribute is perhaps more likely to be found in the typical gardener than in the average aspirant for landscape architecture degrees, for, oftener than otherwise it is his inborn affinity with the spirit of Nature and the delightful content experienced in living in close companionship with her most beautiful products which has influenced the gardener in the choice of his occupation. The fact that the greatest landscape artists in the past have come from the ranks of the gardeners is significant and suggestive of what the future may bring forth.

AFTER ADJOURNMENT.

Our seismometer indicates the presence of another brain storm in one of the cloisters of the Rhinelander Building, with impulse running north-east and south-west.

It would be a wise thing for the growers hereabouts to visit their New York commission men and see what is doing in the market before shipping. They might receive better returns.—Rhinebeck news in Poughkeepsie Eagle.

"This is wisdom's part."

We hear that there was a strike at a florists' establishment in Indiana a few days ago. So far as we can remember this is the first instance of a strike in the florist trade and we hope it will remain as a solitary instance. There never was a grievance yet that could not be remedied without this baneful recourse. Cut it out, boys.

Cleveland florists and undertakers are indulging in a little scrimmage over the question of prices and the commissions paid to the undertakers on funeral flower orders. Flowers at funerals are all right and fitting but the less the florists have to do with the undertakers the better it will be for the florists. There is only one time when humanity cares to come in contact with the undertaker; there is only one business on which they wish to visit him, useful man that he is, and the florist who wants to get and hold his share of the trade of cheerful flower buyers will keep the undertaker, his wagon and other paraphernalia well in the background.

That's an amusing war which the citizens of Topeka, Kans., have undertaken: a concerted attack on the dandelion, in which every one of the 45,000 inhabitants from the governor of the State down, are expected to take part. Tuesday of this week was appointed by proclamation of the mayor for the onslaught. The State House was to be closed for the day so that all the officers and assistants could wage war on the pests in the State House grounds assisted by 100 boys from the Reform School under inspiration of a band of music. The dandelion does muss up the lawn some, we agree, but if there were no dandelion-besprinkled fields one of the greatest charms of the spring days would be lost. The drug stores in Topeka doubtless have been sagacious enough to stock up on lame-back remedies. From what we know of the dandelion, it is "good at a fight."

A TALK ON BERMUDA.

At the horticultural seminar April 8th, Mr. G. A. Bishop, instructor in floriculture, Massachusetts Agricultural College, gave a very interesting account of Bermuda and the business of growing lilies, onions and potatoes there. He told about the ravages of the lily disease and how they were now overcome to a large extent. He spoke about the difficulty of keeping pure stock of Harrisii and of the introductions of various strains of Longiflorum and other varieties. He told about the difficulties experienced in the truck growing and shipping trade. As Mr. Bishop was engaged for several years in this work in Bermuda, he was able to give a very accurate as well as entertaining account.

THE MUSINGS OF MCGORUM.

I have just received my share of the free seeds; the chickens seemed to like them and the change of food seemed to make them thrive. I am surprised that certain of our silver-tongued orators from New York didn't get after the President about this thing when in Washington. There would have been a chance to have made their names everlasting by doing something that would have been a practical help to the trade, instead of wasting their time writing volumes about one little word. Suppose that the Washington members of both houses should pay full rate postage on all seeds, would they be so eager to send them?

In a daily paper not long ago I noticed there was a vacant space left in the Roosevelt hall of the followers of Munchausen. I hereby elect Job to fill that vacancy. Job wishes to know why I didn't exhibit at the Boston show. In the words of a friend of mine that show is at present an exhibition mainly for private gardeners. Is it any fun in exhibiting when there is no contest? I leave it to Job and others to tell the reason, but the leading light on the special prizes at the fall show is a private gardener and a pencil pusher, more power to his elbow.

The editorial in last week's issue of your New York contemporary contains some startling things, yet amusing. That paper has always classed itself as a purely trade paper, but in a certain catalogue of books, I find it is listed to anyone who has the money to buy it, and at a cut price. Probably the editor is ignorant of this fact. It is listed along with The Foolish Book and The Cat Journal, both of New York. I wondered where all its Bible talks were coming from. It has probably been read and discussed at some old ladies' sewing circle, and the Bible talks have possibly come from a member of the Oil Magnate's Bible Class. Strange, isn't it? We may expect to hear Job saying he is the author of the saying "Let there be light."

ROBERT T. MCGORUM.

DAHLIA ROOTS vs. CUTTINGS.

Editor HORTICULTURE:

While what J. K. Alexander says in your issue of 13th concerning roots of dahlias being more satisfactory than green plants is true, yet even an amateur need not be afraid to plant green plants in fear that something will happen to the young growing plant, or that the tubers will not winter. Like Mr. Alexander, the writer has tested the various methods of propagating and times of planting and reached the conclusion some years ago that for general purposes single eye divisions of dahlia roots planted late were best. But when it comes to novelties and when one, be he professional or amateur, wants to be up-to-date, then by all means buy green plants, for these only are available; or content one's self with following on behind the times.

The small dealers who are pushing the sales of green plants of novelties need no defense, all credit to them, and to seedling raisers who give us something new to look at when exhibition time comes around.

ALEXANDER MacLELLAN.

WHOLESOME CHESTNUTS.

The variegated vinca is much in demand for window boxes, tubs and many other forms and arrangements of plant decoration. The best plants for many purposes are to be had in 4-in. pots, but for those having much of the kind of work indicated to do plants in 3 or 3 1/2-in. pots will be very handy because usually after all the other plants are in place in a box or tub there is but little room left for the vincas which are usually put in last. For such purposes usually the main object is to have the vine long enough; diameter is not of much moment.

There is yet a little time left for the propagation of some kinds of bedding plants such as coleus, alternanthera and the like, but in the case of the former especially it cannot be too often said that invariably it will be found cheaper to purchase nicely rooted cuttings from some large grower who has special facilities for the production of that class of stuff in immense quantities and at extremely low figures.

Don't forget Memorial Day. Try to have something at once obviously appropriate and distinct for the occasion. We have not heard of any such thing so far but who knows but you may be the one to strike it, and make a good thing out of it. In any event have some nice plants in bloom for the occasion and announce the fact so that others not having such may know where to get them.

In planting flowering shrubs it is always well to bear in mind the importance of having a prolonged season of bloom. With that object in view, species and varieties should be chosen that will bloom from early in summer to as late a period as plants that are in other respects suitable are known to flower. On small areas of home grounds shrubs planted singly or in small groups are often desirable and sometimes a necessity, but in cases where much space is to be embellished more effecting, pleasing and elaborate ornamentation will be the result if shrubs are planted in large masses, or long, continuous and, if need be, interrupted borders, using species and varieties of one kind in the planting as much as possible.

A curve in a road by which a mansion is approached should have near it something to justify the curve. Where a curve is considered desirable, if there is not already something of the sort there, a specimen tree or a group of shrubs should be planted. Flower beds are very pretty, but it has often occurred to us that they might look just as pretty and more appropriate if, instead of scattering them all over a beautiful green lawn, a place should be found for them where they could nestle closely together. That may not be a good term to use, but the object is harmony of effect as well as a regard for the fitness of things, both of which are often ruined by patches of geraniums, coleuses and the like, where no mortal man would reasonably expect them, but which if properly and appropriately placed would be a source of pleasure.

Orlando Harrison says that the York Imperial and Grimes' Golden apples have been found the most profitable on the western shore of Maryland.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

The trustees of the Massachusetts Horticultural Society have voted to open the library of the Society to its members and others interested in horticultural matters on Sunday afternoons from 2 to 6 o'clock, beginning Sunday, April 21.

It is believed that there are a considerable number of persons, whose business will not permit them the privilege of using the library during the hours in which it is now open, who would welcome the opportunity to use it were it open during some portion of their leisure. This applies especially to garden employees, who have little time and are not overburdened with means; yet, it is largely upon upon such men that the present and future success of practical horticulture depends.

The Massachusetts Horticultural Society, by offering young gardeners the use of its library, will be fulfilling an important part of its mission—the advancement of horticulture.

While the free use of the whole library is offered it is believed that the opportunity to consult the world's best horticultural periodicals will be greatly appreciated by many who could not under the former arrangements make use of them.

WM. P. RICH, Secretary.

COLUMBUS FLORISTS' CLUB.

Our club met on the 9th, a goodly number of members on hand. Since our last meeting our club has asked the permission of the Columbus Board of Education to be allowed, as in previous years, to make distribution of flower and vegetable seeds to the children of the public schools at one penny for each packet. The Board of Education have this season refused this privilege. At the same meeting they voted, however, to have their clerk correspond with the congressman from this district as to procuring free seeds for the children from the congressional distribution. On the main issue, that the plan of small packets of seeds for the children's gardens is a good one, there seems to be no difference of opinion here; but how it should be done has raised a seemingly uncalled-for strife.

At this meeting the best display of plants and flowers thus far this year was made: John Williams received 20 points for an *Araucaria excelsa*; Sherman F. Stephens, 13 points for some fine hyacinths, King of the Blues; R. A. Currie, 15 points for *Tournesol* tulips; I. D. Siebert, 13 points for callas, and John Williams was also "highly commended" for his geraniums. It was also arranged to hold this season in June a Strawberry Show, and to make the occasion a special entertainment for the ladies. In regard to the annual field day and picnic, the club chose a committee consisting of Messrs. James McKeller, R. A. Currie, George Bauman, Jacob Reichert and W. F. Metzmaier to arrange the affair.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

This club had a rousing meeting on Tuesday evening, April 16, there being no less than 150 members present to listen to B. K. Howard's enjoyable lecture on landscape gardening. It was a charming presentation of the topic from the view-point of the artist. After the speaker had concluded the subject was taken up and discussed the participants dividing on the question of prim tidiness in gardens and grounds vs. adherence to unconventional natural conditions, the gardener emphasizing the necessity of raking up dead leaves, cultivating the ground between shrubs, the production of perfect individual specimens, etc., and the other side urging for a recognition of the natural characteristics which tend to unity and a harmonious whole as superior to an unnatural conglomeration of units each with its own "hair cut." Lecture and arguments were received with much enthusiasm and applause greeted every telling point. A question from the Box drew out some varying views as to the advisability of trying to "carry over" Richmond roses under glass.

On the exhibition table were some remarkable spikes of *Lilium candidum* from W. N. Craig, which received honorable mention, *antirrhinum* from Wm. Downs, which also received honorable mention and a beautiful new hybrid *gloriosa*, flower crimson with white edge of petals shown by Arthur Griffin which received a report of merit.

Thanks were accorded to the Massachusetts Horticultural Society for its action in opening the library on certain evenings and invitation for the club members to make use of the privilege. Jackson Dawson was elected an honorary member.

The annual banquet of the club will take place at Horticultural Hall, Boston, on the evening of April 24, at 6.30 o'clock. Dancing after the banquet. Tickets are \$1.50 each and can be secured from the officers of the club up to and including Saturday, April 20, after which date, no tickets will be obtainable.

SPOKANE FRUIT AND VEGETABLE GROWERS' ASSOCIATION.

The Spokane Fruit and Vegetable Growers' Association elected these officers at the last meeting, when 150 members were in attendance: President, A. A. Kelly, Spokane; manager, John Gifford, Spokane; trustees, three years, W. S. Kelsey, Greenacres; J. F. Strong, Five Mile Prairie; W. H. Stoneman, Mead; George Kingston, Foothills; two years, E. W. Ross, East Spokane; George Gates, Orchard Prairie; L. P. Passmore, Moran Prairie; S. Miller, Greenbluff; E. Whitmore, Greenbluff; one year, C. L. Smith, Spokane. R. W. Bailey, East Spokane; A. Worthington, Hillyard; C. F. Young, Spokane; W. M. Jones, Greenacres.

PASADENA GARDENERS' ASSOCIATION.

The second annual spring flower show which was held on the 4th, 5th and 6th of April under the auspices of the Pasadena Gardeners' Association, proved to be a magnificent success in every way. It was pronounced by some of the visitors to be the best ever held in southern California, but we do not go as far as that. The exhibition was gotten up for the first time last year as an experiment and to encourage the interest in horticulture and floriculture, and the promoters of the association feel gratified by the success attained and interest which has been taken in the various branches of horticulture.

The exhibition was held in a large tent on North Fair Oaks avenue, Pasadena, and with exquisite taste the exhibits were so arranged that each had its full share of light and effect. Although the weather was hardly suitable to the exhibition of orchids Mr. A. K. Macomber's exhibit was a magnificent sight, which was awarded first prize, also special ribbon and certificate of merit.

The aquatic exhibit of Mr. Sturtevant of Hollywood was very good, displayed in the center of a small stream, and artistically arranged with a fountain of beautiful design. The exhibit of palms and ferns were especially effective, also table decorations which were tastefully carried out by Misses Thomas and Hudson who gained first and second prizes.

Other prizes were awarded as follows, first and second respectively:

Stocks, D. M. Corner, E. Kirby. Pansies, Mrs. Girouard, Frank Powell. Sweet pea, Thos. Lambert, Geo. Dell. Gaillardia, A. C. Johnstone, C. Holder, gardener, Otto Heutych, Marguerites, H. Ramsey, Mrs. Durand. Lilac, Mrs. Watson, A. Harding. Bulbous plants, Mrs. Watson, with daffodils. Anemones, J. Manser. Bougainvillea, C. P. Morehouse, F. E. Wilcox, Wm. Augustine, gardener. Poppies, calenda and verberna, C. Holder. *Antirrhinum*, D. Cameron, J. Manser. *Acacia*, Mrs. Watson. Wild flowers, Roy Dell. *Cineraria hybrida*, J. Albrecht. Boston Fern, M. Cameron. *Elegantissima*, Mrs. H. M. Singer. *Asparagus plumosus*, M. Cameron. Sprenger, E. Rust. *A. deflexus*, Mrs. H. M. Singer. Carnations, Theo. Frantz, W. Augustine. Collection of palms, Park Nursery. Rex Begonias and begonia collection, Mr. Cameron. Best flowering begonias, Park Nursery, H. Thornton. Tropical plants, Park Nursery. Cacti, H. Boorman. Floral basket, Mrs. J. R. Vose, Misses Thomas and Hudson. Group of plants, E. H. Rust, Park Nursery Co.

Among the striking features of the show were an exhibit of roses by Howard & Smith, not for competition; a display of amaryllis from the purest white to deepest red, introduced in the West for the first time and said to be English prize winners; and gladiolus.

ST. LOUIS FLORISTS' CLUB.

The April meeting and annual rose exhibition was held on April 4. The attendance was better than at any previous April meeting. Vice-president John Cannon handled the gavel. The trustees reported that the celebration of the twentieth

VICTORY HAS MADE GOOD

Place your orders early for rooted cuttings. Prices \$6 per 100, \$50.00 per 1000. DISCOUNT FOR CASH WITH ORDER

CUTTMAN & WEBER

The Wholesale Florist
of New York
43 W. 28 St.,

Grower
Lynbrook, L. I., N. Y.

anniversary of the club and the picnic would not be held at the same time; a full report on the entertainment to be furnished would be made at the May meeting.

The question box brought out discussions and reviews of the Easter trade. The growers complained of the warm weather in March and stated the loss on flowering plants and bulb stock was fully 75 per cent.; the wholesalers felt the glut two weeks before Easter and the scarcity one day before; the retailers smilingly told of medium prices, good weather for delivery and fine trade. The roses shown were of excellent quality. Harry Young, F. Fillmore and G. Augermiller were appointed judges, and reported as follows: To J. F. Ammann, first for vases of Chatenay, Killarney, Richmond, Ivory, and second on Bride; Walter Weber, second on Chatenay, Richmond and mixed roses; honorable mention for Miss Kate Moulton, staged by Minneapolis Floral Co.

The next meeting will be held on May 9, at two o'clock.

MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

The April meeting was a very enthusiastic as well as most edifying one. It was "Rose night." We had three fine vases of Queen Beatrice from F. H. Kramer, Washington, D. C. A lively interest was taken in it. It previously secured a certificate of merit here.

L. A. Noe had a vase of American Beauty and one vase each of Richmond, Bride and Bridesmaid. Wm. G. Badgley brought Bridesmaids, David Falconer, Brides and Bridesmaids; John R. Mitchell, Brides and Bridesmaids; Andrew Kennedy, gardener to Dr. Leslie D. Ward, cinerarias; Alexander Boourn, Killarney rose, and Robt. M. Schultz, Richmond. Cultural certificates were secured for the above.

Papers were read on the rose by David Falconer and Andrew R. Kennedy, both fine efforts. An interesting hour was spent in after discussion. The essayists were asked to explain many little kinks in their paper, and many pros and cons were put forth. Discussing live questions is what seems to bring the boys together.

May 8th will be devoted to "Lawns, their Care and Management," Arthur Herrington, essayist. E. R.

The Fruit Growers' Association of Wenatchee, Wash., elected these officers: President, M. O. Tibbetts; vice-president, C. B. Clark; treasurer, Guy C. Brown; secretary, E. T. Belch; trustees, William Turner and John R. Peters, Wenatchee; M. O. Tibbetts and C. B. Clark, Cahsere; H. W. Otis, Peshastin; C. C. King, Entiat, and E. T. Belch, Malaga; exhibit committee, William Turner, George Farwell, L. H. Tuchenal, C. C. King and T. A. Vaale.

BLOCK OF CHOICE EVERGREENS.

John Waterer & Sons' American Nursery, Bagshot, Eng.

APPLES FOR FRANCE.

Consul John C. Covert, of Lyon, has received a letter from the Idaho State Agricultural Association stating that the farmers of that State are about to embark in an effort to sell large quantities of their apples to foreign countries, and making inquiries about packing, etc., and the possible sale of their apples in France. Mr. Covert responds:

There are a number of wholesale dealers in fruit in this city who say that they sometimes have to import large quantities of apples from foreign countries. Their imports thus far have been principally from Canada. Russet apples are very popular with them. A few apples have been received here from California and they are very well liked. Some fault was found with the packing, from which many of the apples were found bruised upon arrival. The largest fruit dealer in Lyon suggests that a heavy lining of coarse paper be placed on the sides of the barrels, between the apples and the wood. They should also be packed in as small quantities as possible. In all the cities of France there are many thousands of small fruit dealers who would buy a small barrel or crate of apples, but could not buy a large barrel.

In the great central markets in the cities of this country, game, fish, or fruit, in their season, is sold at auction once or twice a day. If the Idaho people would appoint an agent here to receive their apples and sell them at auction, they might succeed in forcing their way into this market.

WHY SO MANY NEW INSECTS?

From Bulletin of Storrs Agrl. Exper. Station.

With the advent of every new pest comes the question, Why are there more insects now than formerly? Our parents and grandparents grew fine apples, and they gave no attention to insects and the troubles attendant on their treatment. A partial explanation of this fact is found in the many disturbances of nature, chief among which is the removing of our forests, which has forced insects to change their diet. It is true that many species have been imported and others have been more thoroughly distributed. We now have a much better knowledge of insects and consequently they come more frequently under our observation. The question is also largely one of ideals. Our ancestors were satisfied with smaller yields and lower quality; that is, they did not seek for that perfection with which our modern growers are so much concerned.

SHRUB CHAT.

Spirea Davidii considering its merit which is of a very high order, and its being a comparative novelty, is offered by dealers at a very reasonable price.

Aralia Japonica sends up spikes of snowy white flowers in autumn.

The *Buddleias* are very desirable shrubs. Of the several varieties in cultivation *B. variabilis* is perhaps the best; it flowers in long clusters of reddish violet color. Illustrated by a colored plate in HORTICULTURE last year.

THE SAN JOSE SCALE.

Doubtless one of the worst insect pests with which the fruit-growers of the United States have to contend is the San Jose scale. It is scattered all over the country, from the Atlantic to the Pacific, and from the Gulf to the northern tier of states. This little insect, less than one-fourth the size of an ordinary pinhead is causing millions of dollars of damage to our fruit plantations, and hundreds of thousands perhaps to a variety of ornamental trees and shrubbery.

In Rhode Island it is found in every section where nursery stock has been planted in the last ten or twelve years, and where special precautions have not been taken to guard against its introduction. Many of our people feel that it is a great deal worse than the notorious gypsy moth, but they should remember that we have not yet experienced a real attack of the moth such as it is capable of making, and that this pest is omnivorous in its appetite, besides causing a great deal of personal discomfort in crawling over and into everything while the scale has very few food plants and remains unnoticed except in so far as it destroys the trees.

The scale is a tremendous factor and it is revolutionizing fruit growing. The old-fashioned way of planting orchards and expecting them to bear good fruit without care is disappearing. Fruit growing is becoming one of the intensive lines of agriculture. The professional fruit grower with a good up-to-date spraying outfit, a knowledge of how to spray and of other factors of culture and marketing, is going to succeed in spite of the scale, and we may perhaps be compelled to say, will succeed better because of the scale.

There are vast quantities of facts and principles yet unlearned or undiscovered regarding fruit-growing, and the San Jose scale is a force that will compel the fruit-grower to learn many of them. The small fruit-grower and the householder who has only a few trees for his own use is the one on whom the struggle will bear the hardest, but even he, by adopting some of the principles of the large grower and substituting perhaps dwarf trees for standards, will be able to succeed.

The San Jose scale was imported from China into the San Jose Valley, California, about thirty-five years ago and from there it has been carried all over the country in nursery stock, almost before its dangerous character was realized. Unlike the Scurfy and Oyster-shell scales which have troubled the fruit-growers for a century or more, and which lay eggs in the fall of the year that hatch at some definite time the following summer, the San Jose scale lives over the winter in the larval stage, and after maturing in the spring produces young which hatch eggs inside the body of the female. This process may go on for five or

six weeks before the insect dies. The larvae soon settle down, insert their sucking tube into the bark and, in a few days, secrete a waxy covering or scale which protects them from injury. The young mature in about 35 or 40 days and then begin to give birth to a new generation.

The Oyster shell and Scurfy bark scales can be treated with an ordinary kerosene emulsion at the time when the eggs hatch in early summer, and if thoroughly done, every one of the young scales will be destroyed. This method cannot be used for the San Jose scale. Solutions which would destroy the female scales would be too strong for the foliage of the tree. It is possible to kill the young larvae with the same solutions as used for other scales, but it is evident from the life history already given that applications would have to be made once or twice a week throughout the summer in order to reach all that are born before they have time to form the protective covering.

As the insect has few enemies, most of the young scale live to mature and reproduce and with the several generations which appear during one season, it is possible for one female which winters over to have more than three billion descendants at the end of the season. This illustrates the force of what we wish to impress upon all who expect to battle with this insect on fruit and ornamental stock, that spraying, as ordinarily carried on, is inefficient and almost certain to lead to disappointment and the idea that the scale cannot be controlled. A very few scales which may escape a careless application of the spray remedy may have progeny enough to lead the fruit grower to think, when the fall comes, that the application of spray remedies the previous season was of absolutely no avail, when, as a matter of fact, he may have killed 95 per cent of those wintering over.

The precaution is obvious. Every portion of the tree must be covered with the spray to the very tips of the twigs, and from all sides. This can only be accomplished with a good spraying outfit. The first requisite is a good spray pump with which a pressure of 75 to 125 pounds can be maintained at the nozzle. If the Vermorel type of nozzle is used, this pressure will produce a fine, mist-like spray, which, if intelligently directed, will strike and adhere to all parts of the tree. As an illustration of the efficiency of a misty spray over a coarse one, notice how much more thoroughly a tree is dampened by a heavy fog than by a brisk shower.

The best remedy today is the lime-sulphur wash prepared as follows:

Slake 20 pounds of good stone lime in a small quantity of hot water. While the slaking is in progress, sift into the lime 15 lbs. of Flowers of Sulphur and mix the mass thoroughly. When the ebullition has ceased, add 20 to 25 gallons of hot water and boil from 40 to 50 minutes. Pour through a strainer having 20 to 24 meshes to the inch into a tank or barrel and add water, hot preferably, enough to make fifty gallons. The mixture should be applied while hot, and if any of it is left standing over night, it should be heated before being applied.

Where boiling is impracticable, a good spray mixture can be produced without it by adding five pounds of caustic potash to the lime and sulphur above mentioned when the slaking has ceased. This will, of course, make the mixture more expensive and it also renders it more disagreeable to handle.

When it is impracticable to make the lime-sulphur wash in any of these forms, fairly good results can be obtained by the use of one of the miscible oil sprays now on the market. Scalecide, is one of the best of these and Kill-o-Scale is another which is quite highly recommended. These oil sprays mix readily with cold water and are very easily applied.

To recapitulate: Fruit-growing is becoming a business which will require close attention and thorough knowledge of all facts and principles whereupon depend a successful fight against fungous diseases and injurious insects and the production of first-class fruit. Eternal vigilance is the price of good fruit, and we may well add, "To the victor belong the spoils."

The spraying must be done with good spray mixtures and up-to-date apparatus. The work must be thorough. If a wind blows, only one side of the tree can be sprayed. The other side must be treated when the wind is from the opposite direction. Have pressure enough to produce a fine mist as the spray leaves the nozzle. Cover every spot on the tree to the very tips of the twigs. A good sprayer will do this without deluging the tree so that the liquid runs down the stem or drips from the branches.

Use the boiled lime-sulphur wash if possible. If not, use lime-sulphur potash; or one of the miscible oils. Spray as soon as the leaves have fallen in the autumn, and if the trees are badly infested, again just before the leaves come out in the spring.

SMALL FRUITS AND THEIR RELATION TO THE HOME GARDEN.

It is a source of surprise that the householder and gardener are apt not to give the care and attention to the growing of small fruits that is given to the vegetable and flower garden, and it is very hard for a fruit grower to understand the reason for this. Possibly the land owner does not care for this class of fruit, or perhaps he thinks it is too hard to grow; at any rate we do not find these fruits as common in our gardens as they were fifty or more years ago. To be sure the strawberry is grown almost everywhere, but in how many gardens will you also find raspberries, blackberries, currants, gooseberries, etc. You may see a few bushes of each of the above but not in the great variety that would insure a long season of these delicious fruits. Few people realize what a long period these fruits will cover. Beginning with the strawberry June 15th, and ending with the blackberry September 10th, we can cover a season of the year when no other fruit, with the exception of the peach, can at all compete with these small fruits. The strawberry can be had from five to six weeks by planting early medium, and late varieties, combining all the best flavors and most attractive berries. Then raspberries, from early to late, a season of six weeks, which, with red, black, and yellow varieties, are among the most attractive summer fruits. Red currants, while largely used for preserving, are a very delicious and refreshing fruit when thoroughly ripe, and used together with one-third of the white variety cannot be surpassed for the table on a hot day. Gooseberries too are but little grown in the home garden chiefly because but little known, and they really should be classed as one of our best fruits. Thoroughly ripe gooseberries are most delicious eating, are easily grown and take up but little room in the garden, for one bush will produce eight or ten quarts of the fruit.

The matter of space one has at his command must of course have a great deal of consideration before being planted, but a well planted garden can be made to accommodate all these small fruits mentioned and still leave room for a few apple, pear, peach and plum trees. Currants and gooseberries will stand a good deal of shade so plant them under the larger trees;

10,000 AMERICAN ARBORVITAE (*Thuja Occidentalis*)

Each tree grows wide apart and splendidly developed on all sides. So bushy that for hedges or screens they will go almost twice as far apart as ordinary Arborvitae will. They have been frequently transplanted and are supplied with an abundance of fine fibrous roots. Can be dug and shipped with ball if desired.

FRUIT and VEGETABLE PLANTS

If you want Fruit Plants, Trees or Vines for the Garden or for Commercial Purposes write to Wilfrid Wheeler, Concord, Mass., who has a complete line of Strawberry plants, Raspberry and Blackberry roots, Currant and Gooseberry bushes, Grape vines, Apple, Pear, Plum and Peach trees. All clean stock and true to name.

Enough fruit plants can be furnished to plant a small Home Garden for \$3.75 or a larger one for \$6.00. Write for catalogue to

WILFRID WHEELER, CONCORD, MASS.

then a fence or a hedge is an excellent place for blackberries or raspberries. Strawberries need the sun and lots of it but you surely can spare a sunny spot for that fruit and grow fewer potatoes and cabbages. Fruit always seems so much more attractive to grow than vegetables, but this may simply be a personal prejudice. You however will agree with me in thinking that fruit tastes a great deal better when you are out working in the garden than, for instance, a beet or a squash or an onion.

Don't let this year go by without planning for the home fruit garden and give it the best care you can. It takes only one year to get most of these fruits into bearing condition, and once established you have your garden

as long as you will care for it. We need more fruit knowledge among our people. Too many of us are too hurried and busy to give the subject even a passing thought, much less intelligent study. Then too we see so much fruit offered for sale on our streets that the fact that we can grow our own is not impressed upon us. A person, once having grown fruit for himself though, will never return to the store article. Plant an abundance of these good things with which nature has so richly endowed us, and enjoy them to their fullest extent.

WILFRID WHEELER.

William H. Maher has the contract to keep the parks of Newport, R. I., in order for a year.

SEED TRADE

Advices just to hand indicate an improvement in crop conditions in California. The rains have ceased, at least temporarily, and work can be resumed in the fields; and it is high time, as weeds are choking the crops. After conditions become settled, and an intelligent inventory of the damage done can be taken, we can get a fairly accurate estimate of the situation.

While the floods were rampant and conditions at their worst, opinions of even cool-headed men were more or less hysterical, and this is said without any wish to minimize the damage, as beyond all doubt it has been very serious, quite possibly fully as bad as imagined. In the meantime planting is going on, and if fair weather continues, prospects will grow brighter, and what is not already irrevocably ruined, may prove less seriously damaged than feared.

Reference was made in last week's Seed Trade Notes, to the danger of the concentration of crops. The trade received a severe lesson of what this may mean in the failure of the vine seed crops in Nebraska a few years since. Due to congenial soil and climate and the still more important factor of prices, the growing of vine seeds had become concentrated in the vicinity of Waterloo, Neb., to such an extent that fully seventy-five per cent. of the cucumber, melon and squash seeds used in this country and Canada were produced in Nebraska.

The prices at which these goods were grown in the vicinity of Waterloo, made it almost impossible for other sections unfavorably placed in the matter of soil and climate, to compete, the result being a gradual concentration of the crops at that point, until, as stated above, fully seventy-five per cent. of all the vine seeds used in the United States and Canada were produced around Waterloo; then when the failure of these crops followed two years in succession, prices advanced from five hundred to one thousand per cent.

Much of the seed sold was practically useless, and the firms sending out this junk would better have thrown it into their furnaces, both from the monetary point of view as well as in the matter of reputation.

What occurred in Nebraska in 1903-4, to the vine seed crops, occurred last year in California in a less aggravated degree to the onion seed crops, and unless conditions are greatly exaggerated, promises to be much more serious the coming season. In short, the outlook is regarded by most experienced seedsmen as the worst in a quarter of a century.

The concentration of onion seed growing in California was due to precisely the same causes as brought about the concentration of vine seed growing at Waterloo; but even a larger percentage of the onion seed used is grown in California, fully ninety per cent. of the total being grown there.

What will follow on the heels of the extremely short crop of last year, should this year's crop prove a general failure, can be readily imagined, and it can only be hoped that this will not be the case.

Following the two years' failure of the vine seed crops in Waterloo, they have been more widely and generally grown, and no doubt the same results will follow this year's failure, or very short onion seed crop, but concentration will again take place, if not at Waterloo and in the Santa Clara valley, then in some other section, whenever the combination of soil and climate assuring good crops is found, coupled with the yet more important matter of low prices.

The sale of onion seed to the Department of Agriculture two years ago by prominent California seed growers at 17 and 18c. per lb., was a blunder in many respects. For one thing it established absolutely false standards of values at Washington, making it impossible for any one to get a reasonable price for onion seed from the Department, and giving rise to a false idea of the enormous profits made by seedsmen. For that matter, the same indictment can be brought against them on many other seeds grown in California which have been sold to the National Department of Agriculture at from one-third to half the lowest prices ever named to seedsmen, and the Department will not purchase many lines of seeds unless at about this basis of values. More may be said along this line at some future time.

In the meantime active preparations are making for the planting of peas, the acreage of which will be the largest ever planted, and with an average yield the crop will be the largest ever harvested.

Arrangements for the program of the forthcoming annual convention of the American Seed Trade Association, to be held at the Hotel Astor, Times Square, New York City, June 25th, are progressing very well. Among some of the most interesting matters already arranged for are the following:

"Reminiscences of the Seed Trade," by Mr. F. W. Bruggerhof, of J. M. Thorburn & Co. Mr. Bruggerhof has had an active experience of more than fifty years in the trade, and those who are fortunate enough to have a personal acquaintance with him feel sure that his paper will be a most interesting and valuable one.

Dr. B. T. Galloway, Chief of the Bureau of Plant Industry, of the U. S. Department of Agriculture, has agreed to give a talk on "What the Department of Agriculture is doing for the Seed Trade."

Mr. J. Horace McFarland will prepare a paper on "The Twentieth Century Seed Catalogue." From Mr. McFarland's knowledge and experience in this particular line, his treatment of the subject should be both interesting and profitable to the seedsmen.

Mr. S. F. Willard will deliver a paper on "The History of the American Seed Trade Association," giving a review of the principal and most notable events of the Association's past history.

The convention to be held in New York is the twenty-fifth anniversary of the formation of the American Seed Trade Association, and efforts are being put forth to make it a most notable occasion, in celebration of that event. The selection of the Hotel

Astor by the local Committee on Entertainment is a very happy and fortunate one. This hotel is one of the most up-to-date in New York City, with airy roof gardens, etc., centrally located, and its selection should add very much indeed to the success of the convention.

SUMMER SCHOOL OF HORTICULTURE.

The Summer School conducted by the Massachusetts Agricultural College at Amherst, Mass., opens on July 8, 1907, and continues four weeks. There will be morning lectures comprising four regular courses of study of 20 exercises each, one each day throughout the term; afternoon exercises from two to five o'clock; three Saturday excursions, and about two evening lectures.

COURSES OF STUDY.

Course 1. Pedagogy of agriculture. Instructor to be announced.

a. Pedagogy of agricultural subjects in general. b. Pedagogy of nature study. c. Pedagogy of school and home gardens.

Course 2. Plant structure and plant life, in charge of Prof. E. A. White.

a. Plant structure and plant life. b. Arboriculture. c. Forestry.

Course 3. Plant culture, in charge of Mr. E. H. Scott.

a. Propagation of plants. b. Tree planting. c. Soils. d. Fertilizers. e. Tillage (purposes, methods, tools). f. Farm crops. g. Orchard and garden crops. h. Plant diseases and spraying.

Course 4. Animal life, in charge of Dr. J. B. Paige, assisted by Dr. H. T. Fernald, and Mr. E. H. Forbush.

a. Domestic animals. b. Poultry. c. Bees. d. General biology. e. Insect life. f. Bird life.

AFTERNOON EXERCISES.

School gardens; Practical gardening, 4 exercises each, Mr. Hemenway. Nature study tramps, 3 exercises, Mr. Monahan. Forestry, Prof. White; Geology of soils, Mr. Scott; Dairy practice, Prof. Cooley; Field crops, grass crops, Prof. Brooks; Orchards and gardens, nurseries, Prof. Waugh, one exercise each.

An example of the manner of conducting the practical exercises follows:

CROSSING NASTURTIUMS.

1. Study structure of flower. Draw vertical section. Note especially (a) position of nectaries, (b) position of stamens, (c) protecting hairs.

2. How is the nasturtium pollinated naturally?

3. What is the character of the pollen? 4. How can you determine when the stigma is receptive?

5. Are pollen and stigma ready simultaneously in a given flower?

6. Practice emasculation. When should it be done?

7. Practice crossing. When should it be done? How is the best way to transfer pollen?

8. Do emasculated or crossed blossoms require protection? Give the reasons.

Correspondence should be addressed to the Dean, F. A. Waugh, Amherst, Mass.

TWO GOOD TAMARISKS.

The Silver Tamarisk.

I see most of the Eastern catalogues do not mention this. It was introduced by Professor Budd. I have had ten kinds of tamarisks. This is the most beautiful and the hardiest of all, doing well in Minnesota. The Russian, the silver, the Odessana and Amurensis are all one and the same with different names. I have discarded all but this which is well adapted to the semi-arid regions. Thousands have been sold in Colorado, where they give the best of satisfaction.

C. S. HARRISON.

Tamarix hispida aestivalis.

A new variety raised from Tamarix Kashgarica, more vigorous and not so compact as the type. In July the branches are covered to the half of their length with numerous sprays of flowers of a bright carmine pink. Blooms two months before Tamarix hispida. Awarded a first prize at the Paris International Exposition of 1900. The plumes will be found valuable for florists' decorative work. G. C. W.

PUBLICATIONS RECEIVED.

Bulletin No. 3 of the American Association of Park Superintendents has come to hand. It contains instructive articles on The Water Garden, The Herbaceous Garden, Bulbs, Play Ground Management and Cement Concrete Construction by eminent members of the Association. Copies may be obtained from the secretary, Mr. F. L. Mulford, Harrisburg, Pa., for a small price.

Bulletin 45 of the Storrs Agricultural Experiment Station, Storrs,

Conn., is by C. D. Jarvis, and deals with the apple leaf miner, a pest of the apple tree, first described in 1860 by Dr. Blackenridge Clemens who named it Tischeria malifoliella. Since that time it has received frequent mention in entomological literature but has not been regarded as a serious pest until last year, when it was reported as doing much injury in Vermont, many partially defoliated trees being observed as a result of its ravages.

Writing in the annual publication of the National Carnation Society of England, Mr. James Douglas undertakes the defence of that society in reply to those who had criticised unfavorably its action in refusing to provide for the so-called tree or winter-flowering carnation in its exhibitions, at the time the American varieties of the latter were beginning to make a sensation in Great Britain. He represents that the National Carnation Society was formed because the hardy summer-flowering carnation and other "florists' flowers" were hopelessly at a discount, whereas Covent Garden is now and has always been overflowing with winter-flowering carnation blooms. He asks: "Where, then, is a need of a special society for their encouragement?" The best answer to his query, viewing the situation at long distance, is the popularity of the American type of carnations among the flower buyers and the splendid success of the exhibitions of the Winter-flowering Carnation Society, organized because of the proscriptive stand taken by the old society. From our viewpoint the National Carnation Society has made a costly mistake.

SHAPE OF ROSE BUSHES.

The advice so often given to cut back rose shoots to a bud pointing outwards is good, as may be seen from a glance at what is called an "open" bush. Each spring the new shoots have grown outwards, leaving the centre of the plant open and free from growths, with the result that the wood gets thoroughly ripened. Where the shoots grow inwards and cross each other, they do not have the same chance of growing and ripening properly. It is not always possible to find an outside bud just where one would like to prune back to, but it is preferable to cut the shoot rather shorter or leave it rather longer, in order to prune to a bud pointing away from the centre of the bush.—*The Garden.*

OBITUARY.

May M., wife of Fred W. Pape, of St. Louis, Mo., died on April 7.

Chester Belding, for many years a florist in Middletown, N. Y., died April 9, at the age of seventy-five.

John H. Brierly of Boulder, Colo., died on April 1, aged 73. He is survived by a widow and two children.

Amasa Kennicott, who passed away on April 7 at his home near Chicago, had devoted his life to horticulture. In 1835 he started in business in Chicago with his brother Flint, who is now president of Kennicott Bros. Co., but withdrew later and became an enthusiastic peony grower. He leaves a widow and three sons.

PERSONAL.

Edward Fenn of Terryville, Ct., is seriously ill.

M. Stauch goes to Pittsburg, Pa., as superintendent for the Pittsburg Rose & Carnation Co.

B. Schroeter and J. F. Sullivan of Detroit are back in harness again after paying homage to Mme. La Grippe.

H. E. George of Pasadena, Cal., has taken a position in the store of Chas. Winsel, and not as a gardener on his estate as before reported in these columns.

H. L. Barnes goes to the N. & A. Institute, Hampton, Va., as horticulturist, in place of F. A. Bartlett, who takes charge of the work at Kilravock Farm, Litchfield, Ct., where nearly 500 acres will be devoted to the raising of fancy apples.

BUSINESS CHANGES.

Charles Schmidt, Harrisburg, Pa., is now located at 313 Market street.

The Maplewood Violet & Nursery Co. is the new name under which the Maplewood Violet House, Lansing, Mich., will be known hereafter. E. A. Zimmerman has purchased a half interest therein and a nursery branch will be added.

The Newport Nursery on Vernon avenue, Newport, R. I., has been purchased by Messrs. Wadley & Smythe. This firm is now engaging in landscape work on a very extensive scale. They expect to make great improvements to the property, which will include the erection of additional greenhouses.

MOVEMENTS OF GARDENERS.

W. M. Tiplady has taken a position at Elmendorf Farm, Lexington, Ky.

H. Athlee goes from the Churchman estate, Indianapolis, to New Bethel, Ind.

Mr. John Nilan, for over 10 years head gardener for J. S. Bailey, West Roxbury, Mass., has resigned, his place being taken by P. Manning.

The Minnesota Horticulturist for April contains obituary notes with portrait of the late Frank Yahnke, a member of the executive board of the Minnesota State Horticultural Society, annual reports of vice-presidents and other interesting matter from the pen of Secretary A. W. Latham of Minneapolis.

In ordering goods please add "I saw it in HORTICULTURE."

CUT FLOWER MARKET REPORTS

BOSTON The past week was one of the dulllest on record for the Boston flower trade this season. The present week started out with a much improved tone, but at present writing the situation has resumed the inactive condition of last week and stock moves with difficulty. Violets are getting scarce. Roses in all varieties are of unexcelled quality; they have never been better, but the lower grades in job lots are the best sellers.

Not in a long time has **BUFFALO** the market been in such bad condition as the week after Easter, but beginning on the 7th, it brightened up somewhat and a good week's business was had for all. There seemed to be no end of lilies and callas. It has not been a case of cleaning up at cheap price but one of dumping when not even an offer could be had. At the end of the week floral work braced up and helped to consume a small portion. Beauties were in fine quality and all grades could be had at a moment's notice. The demand was better than heretofore and they sold out well. The same may be said of Chateaus. In carnations White Lawson and Lady Bountiful led in price. Enchantress, though of best quality, moved slowly and low prices ruled, due to the enormous supply. There was a fairly good demand on sweet peas, lily of the valley and snap dragon, but still too many daffodils. Murillo tulips sold well; also violets, which are in good color but little fragrance.

Trade seems to have **COLUMBUS** recovered from its after holiday slumber, and the past week has been quite good. Had the weather been decent much more business could easily have been done. We have been receiving exceptionally fine stock the last week, roses and violets not having been so good for a long time. American Beauties led in price. The Richmond rose is having a great run here; in fact, to quite an extent it is curtailing the sales of American Beauty. Carnations are selling at low figures with a few extra quality Enchantress at a slight advance.

Flowers of all kinds **DETROIT** were more than plentiful the first of the week and the street vendors had a chance to reap a harvest. The cold weather of the latter part of the week stopped shipments rather suddenly and we have to face a scarcity worse than that of last winter because most of the bulbous stock is gone.

INDIANAPOLIS During the past week trade in general has been good. Stock in all lines is plentiful. Prices are gradually receding especially on Beauties and tea roses. Violets are nearing the end of their season. Late flowering tulips and Dutch hyacinths are in good quantity and find ready sale. Carnations are to be had in any quantity with quality the very best. Callas and Harrisii are not over abundant and are in good demand. Several good weddings are on the calendar this week which is creating a big demand for lily of the valley, orchids and white lilac. Smilax is holding a good price while other greens find little call. There is quite a brisk trade in the flowering plant line but practically nothing first class to be had owing to the extremely warm weather preceding Easter. Several hard freezes have probably killed most of the fruit around this section.

NEW YORK Inclement weather has helped to shorten up the supply generally, and this, with the revival of activity in the retail line, has brought much better conditions to the wholesale market than had prevailed since Easter. Lilies are still an unmanageable burden, but roses are shortened up considerably; carnations may be called scarce, and all bulbous material has been greatly reduced in quantity. "For this relief, much thanks."

Up to Friday last **PHILADELPHIA** week's market was disappointing although the volume was considerably more than the preceding week. Prices took a decided jump on Friday especially in the carnation line and a healthier tone has been prevailing since. Roses did not improve so much in price but cleaned up much better. Beauties are of very good quality but far too plentiful. Libertys and Richmonds are the best sellers. Brides and Bridesmaids are still draggy but there is some improvement. Sweet peas are still in good demand and one of the most satisfactory stocks on the market. Double violets are shortening up but are still fairly good. Singles done. The dark flowered Cattleya Skinneri is now arriving in generous quantity. Snap dragons and Spanish Iris go well at figures rather surprising considering the low cost of production. Lily of the valley is selling better. Gardenias jumpy—some days fair and then again. The flush of the southern daffodil crop is past and many are thankful, although from the consumer's point of view they are all right. Easter lilies and callas are still plentiful. Good tulips can be had in quantity, mostly from the south, with a few from the east, inside stock.

Trade has been remarkably good the **TWIN CITIES** past week considering the fact that we have had very cold and disagreeable weather. Stock appears to be in abundance as every dealer seems to be loaded up on everything. Roses took quite a drop the middle of the week, but they are now back to normal figures. Carnations are plentiful. Bulb stock is practically off the market, and very few late varieties are offered. It looks as though planting of bedding stock will be greatly delayed on account of the backward season. Already a great many orders have been booked, but nothing can be done, we judge, from present conditions, for some time.

NEWS NOTES.

Gunther Bros., wholesale florists, will remove on May 1 from West 29th street to 114 West 28th street, New York, in the same building as Russin & Hanfling, dealers in supplies, are located.

Gustav Pullman, 918 9th Ave., New York, has filed a petition in bankruptcy with liabilities of \$8,706, of which \$6,900 is on an unexpired lease, and assets of nominal value. The N. Y. Cut Flower Co. is a creditor for \$1,494.

April 12th was Arbor Day in Ohio. We are glad to hear from our correspondents that a large amount of tree planting was done by the people generally. In the public schools the custom has now become fixed, to have the children set out trees and shrubs for the beautification of the grounds.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—A Foreman for an eastern establishment. Married man preferred, as good house is provided. Must be a good all-round grower of Roses and Carnations and Mums, etc., and of strictly sober habits. No other need apply. State experience, with references, and full particulars, to No. 9, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Expert help in our Greenhouses where nothing but Cut Flowers are grown for a high class trade. Also a good Chrysanthemum grower and pot man. State salary and experience in first letter. Florist, 1035 Prospect Avenue, Cleveland, Ohio.

WANTED AT ONCE—A sober and energetic young man with knowledge of pruning, planting, etc., to assist in general landscape work. Apply in person or by mail with reference to A. Van Leeuwen, Jr., 3 Wexford Rd., Worcester, Mass.

WANTED—Single man as assistant rose grower on commercial place. Steady position to good man. Give reference from last place and state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B, care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

HORTICULTURAL SITUATION WANTED—Long experience in orchids, palms and exotic plants; been 5 years in tropical country, understand gardening in general. Now at a well-known flower nursery of N. Y. State. Will give best of references in every detail. Private place preferred. Address D. A., Box 303, Ossining, N. Y.

Head Gardener or Superintendent, age 39 years, married, no family; highest recommendations from present and previous employers; trained in England. Please state wages offered. Day, 3641 Warren St., Philadelphia, Pa.

WANTED—Situation as Head Gardener on private place; capable of taking care of orchids, ferns, palms, roses, etc. Best of references. Address N., care of HORTICULTURE.

FOR SALE

FOR SALE.

Desirable Greenhouse Plant, directly opposite Spring Forest Cemetery, Binghamton, N. Y. Large and increasing demand for Funeral Designs and Bedding Stuff; care of cemetery plots big item in receipts. A dwelling house, 10,000 feet of glass, land comprising twenty city lots. Paying business and open chance for increase. Sold on account of advance in years. Apply to James B. Tully, 47 Spring Forest Ave., Binghamton, N. Y.

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 38 Erie St., Chicago.

Some Cold Facts On a Hot Subject

We have something to tell you about boilers—something so reasonable, so chuck full of common sense that you can't afford not to give it consideration. What we have to say is printed up in our small catalog, and arranged so the hurry man can get at the meat instantly. Drop us a postal and along will come the "Cold Facts."

HITCHINGS AND CO.
GREENHOUSE DESIGNERS AND BUILDERS
Manufacturers of Heating and Ventilating Apparatus.
1170 Broadway, NEW YORK.

These men are paid to find imperfections, leaks or missing parts. It costs us but it insures you.

WHAT READY FOR BUSINESS MEANS

Every "Burnham" that leaves our factory is completely set up and tested the day before it is shipped to you — when erected at your place there will be no misfits — no delays or extra expense — and you will have a greenhouse boiler. A boiler made for greenhouse economy.

FOR SALE: Every part or any part for good greenhouses.

LORD & BURNHAM CO.
Greenhouse Designers and Manufacturers
1133 BROADWAY, cor. 26th Street, N. Y.
BOSTON Branch: 819 Tremont Building
PHILADELPHIA Branch: 1235 Filbert St.

WHEN it comes to strength, the U-Bar greenhouses have the lightest and strongest eave line made. Lightest because it's free from heavy braced parts—strongest because it combines the sash bar and steel rafter in one, making possible the curved eave—and a curved surface is always stronger than an angle. The catalog shows it. **Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses,** Metropolitan Building, Fourth Avenue and Twenty-third Street, New York.

MABELLE

New Pink Carnation for 1907

Color—A peculiar shade of lovely pink, with a faint yellowish cast; several shades lighter than the Law-on. Unlike most Pinks, the brightest sun does not injure the color. **Size**—3 to 4 inches in diameter when established. **Odor**—Pleasing, but not strong. **Stems**—Invariably strong, but always graceful, ranging from 12 to 30 inches during the season. **Habit, etc.**—A very quick, active grower, making specimen plants in a short time, even from late cuttings. On account of its rapid growth, requires supporting very soon after benching. Gets away rapidly, blooms early and gives long stems right from the start. **Productiveness**—Prodigious is the best word we know of to use here. It is the most incessant bloomer early and late, we have ever grown. Stock limited. Delivery January 5th to 10th and later.

Price \$12.00 per 100, \$100.00 per 1000

Columbian Odontoglossums

The winter of 1906-'07 has been very unfavorable to the culture of odontoglossums, and it is to be feared that should the coming summer prove a hot one the plants will not have such an easy time as they have had in the past few years. In Pittsburg we have had more than our share of dull, dark and foggy days. The healthy bronze color is conspicuously absent, the leaves being quite green. The percentage of flowers, however, has been good, many plants flowering for the first time, some of them being plants of the real Pachó type which are part of an importation received in 1901. In the collection are some plants imported in 1895, twelve years ago. This knocks the theory that it is impossible to keep a collection without decrease for any number of years. Dr. Shafer keeps an accurate record of every plant which enters the collection and it is interesting to note that there have been scarcely any deaths amongst the odontoglossums although many of the plants were in bad shape on arrival.

The plants are wintered in a span-roofed house running north and south where they get all the light possible. In summer from March till September they have the advantage of a house especially constructed for cool orchids and to which their healthy condition is in a

great measure due. This house which is a lean-to built against the eastern wall of the cypripedium house, is shaded on the south by the projecting front and dome of the centre house. Owing to the peculiar construction of the range which is built on a side hill the floor level of the cool house is 9 feet below the level of the other compartments. In summer the house gets only the morning sun, being, during the hottest time of the day, quite in the shade of the other houses. Bamboo shading is used to protect the plants from direct sunlight, but these are only needed in the early part of the day. The fact that the range is built on a side hill is a distinct advantage in ventilating, as the lowest ventilators are considerably above the ground level in front. The collection, which numbers 175 plants, includes the following species and varieties: *Odontoglossum crispum*, various types, *Andersonianum*, *Pescatorei*, *luteo-purpureum*, *Hallii*, *triumphans*, *Ruckerianum*, *Edwardii*, *gloriosum*, *mirandum*, *Lindleyanum*, *Coradinei*, *spectrum* and *Hunnewellianum*.

James Hutchinson

Commercial Chrysanthemum Culture in France

II.

Our respective ladies have decided to go into Paris and view the chrysanthemum show, there to meet M. Nonin and myself later on. The weather which had certainly been the worst I ever knew in France in the month of November was now a trifle promising and after putting the ladies into the electric tram Nonin and I proceed in the direction of Vanves. Fortunately mine host has had some suspicion of the weather and ere long his man driving a covered van picks us up not many minutes too soon.

Wind and rain begin. The roads are soon flooded and the squalls are most violent. After a drive of some little distance the weather abates, but alas only for a short time, and we find ourselves ringing at the gate of M. Gaston Clement's nursery. This gentleman is a well-known "nummer" and has occupied prominent official

positions on the Paris Chrysanthemum Committee. As a market grower he has had considerable experience having been engaged in the work for about fifteen years. He is a grower for the very early and late seasons—not the midseason.

Altogether Clement's collection comprises about 400 varieties although like others engaged in the trade he has always a considerable number of novelties on trial to replace old varieties when improved ones can be found. His chief customers are the Paris and provincial florists and his culture is mainly plants in pots bearing three to five blooms each. These are cut with stems 3 ft. long, all finely developed, big show blooms that bring from 3 francs to 12 francs for a dozen blooms.

We start with the packing shed. Here are numerous tubs containing the flowers ready for packing. Several

women and boys are at work and we notice the blooms are wrapped in thin paper and packed in deep wicker baskets upright. The nursery itself is not of any great extent as it is only about four acres. The glass accommodation absorbs a good portion of the area. There are about a dozen low pitched, rough-made houses and several others larger in which we see some really first-class blooms.

In one large house constructed in the way previously described there is an immense collection of Julian Hillpert plants, 6 feet high in 10 inch or 11 inch pots with noble looking buds all swelling and showing color freely. These are for late season purposes. A sport from this variety called Soliel de Novembre is also in fine form.

Some of the smaller houses are visited in turn. They look like portable structures with loose lights on top. They are about 5 feet in height and are disastrous for the visitor's hat. Ventilation is secured by propping an inverted flower pot under each corner of the light and when shut down and the weather unpropitious straw mats are unrolled and cover up the lights. A few odds and ends arrest attention, the main early crop of bloom having already been cut and marketed. Gloire Poitevine is a fine crimson with gold reverse. Mme. Louis Dupuis is of medium size, a Jap, color creamy white. La Mauve is a very nice shaped flower—its color is indicated by its name. Edith de Clausonne is a very large Japanese, creamy white; and Robert Lefort, an incurved Jap., very large, color reddish crimson, reverse gold. Among the better known sorts there is a very large quantity of Mme. Paolo Radaelli, which appears to be a favorite everywhere in England and France.

We wander on toward the far end of the nursery and there find another very large roughly constructed glass shelter under which stands a most imposing sight, one of the most striking and effective we have ever seen. Here there are in close array 10,000 plants in large pots of that solid looking Jap., Duchesse d'Orleans. They all bear four or five blooms of full size and the effect is one to be remembered. This pure white noble Jap, with its deeply grooved florets has long been a popular variety with exhibitor and decorator alike.

Another interesting sight close at hand is a large batch of a deep rich yellow sport from the Duchesse, called Ami Nonin. These are grown and flowered in the same style. Mme. Rene Oberthur is another big fine white Jap. that is grown in quantity. Souvenir de Mme. Buron, and Lt. Col. Ducroiset are two good yellows that come early. Le Peyron is also a golden yellow of fine form. Immense quantities of these flowers are sold for All Saints Day and for the purpose of decorating the graves on All Souls Day, a custom religiously observed in France, but one scarcely known in England.

The weather fitful and uncertain has not made our progress an easy one. We are now off to Montrouge to see the nursery of M. Lemaire who is also a large cultivator of the "autumn queen." An immense down-pour signalizes our start and lasts for the remainder of the day. The darkness caused by the heavy rain clouds overhead practically spoils our afternoon's stay at Lemaire's and although under cover we wander about amid streams of water falling through the temporary roofs and up to our ankles in mud.

Lemaire does not cultivate for the late season. He begins cutting in September and finishes in November. His plants are all grown on the big bloom system and are for the florists in the Paris market. His chief collection comprises about 100 varieties of which he grows about 75,000 plants all in pots. He, too, has under trial

others of more recent introduction. We start our visit of inspection here by a tour round the packing shed. Several women and young people are getting a vanload ready for market. Big tubs are filled with immense blooms, all cut with long stems and foliage ready for packing. We note in the tubs many familiar sorts. M. Lemaire's flowers are very largely used for wedding parties, church decoration and the ornamentation of apartments, four hundred blooms of this type often being used at such festive gatherings. His chief aim is to get only large-flowering varieties and his collection is composed of such as will allow him to supply his customers with big blooms of every possible color at intervals of a fortnight during the season. Among them are Bandenier, a carmine reddish incurved, flowering in October. Princesse Alice de Monaco, a fine white Jap., end of September to middle of October. Volcan, an incurved, crimson red, reverse old gold, flowers in September and October. M. Antonin Marmontel, purple rose, Jap., October blooming variety. Calvat's Sun, golden yellow, a fine Japanese incurved, October. Mlle. Lucie Duveail, medium sized incurved, pure white, October flowering.

As in the other places the plants grown here are all placed in rows under their glass coverings and the pots partly sunk in the ground with spaces left at intervals for access. M. Lemaire's nursery is not more than about 2 1-2 to 3 acres in extent but the space is economized everywhere. After flowering, the old plants are cut down and the old stools are put out in the open for cuttings which are struck in April to May.

The day was now far spent and friend Nonin and I hurried off to the show to meet our womankind who under the cover of the greenhouses of the Cours la Reine had spent a far more comfortable afternoon in strolling round the exhibition which is always crowded with visitors at that time of day.

Charmian Rayne

British Horticulture

"NURSERYWOMEN"

Lately there has been a controversy in a London daily paper, as to the suitability of gardening work for women. Some of the writers have questioned whether women can successfully engage in the arduous work of tilling the soil. It is somewhat late in the day to raise difficulties of this kind, seeing that there are several notable instances of the fair sex carrying on profitable nursery and market growing businesses. Two sisters are carrying on a violet nursery in Sussex, whilst I am acquainted with several women who are doing a large business in supplying plants of their own raising. I have lately heard of the achievements of three sisters who have started a nursery near Southsea, on the Hampshire coast. The founder of the business commenced at the age of 19 with practically no capital, and she had to first clear a thistle covered, neglected piece of land. A commencement was made by growing vegetables for market, a glass-house for tomato culture being eventually added. The enterprise proved so prosperous that six large glass houses were required, and these are fully occupied all the year round. Tomatoes have been found the most profitable item, these being in constant demand at the shops in the neighborhood. Pupils are also being trained at the nursery, and in five years a very

substantial business has been built up by the enterprising and energetic trio.

CARNATION CULTURE

Mr. A. F. Dutton, who is a leading carnation specialist, lately afforded me some information as to his methods of culture for show purposes. "The proper time to get the color and size of the tree carnations at their best in England is undoubtedly by November and March," he states, "and the reason can very easily be traced in the condition of our climate at those months. In the summer the flower expands too quickly, to obtain its points perfectly, compared with the autumn and spring, when the growth is considerably slower. The chief points to watch are: firstly, the temperature. This should not vary between day and night more than ten degrees. For night temperature the house should be kept at 45 to 50 degrees. Next in importance to this is the watering. The plants should never be allowed to remain dry after they are established in their pots and have commenced flowering; a feed with some good artificial fertilizer fortnightly is very beneficial. Thirdly and lastly, of all essential points is the ventilating. Carnations, like human beings, to thrive, must have pure air and healthy surroundings, always giving ventilation when the temperature outside is above 35 degrees. This should be regulated by the outside elements. The blooms should always be cut early in the morning, and kept in water a few hours before travelling, using a good, sharp knife, which is most essential to keep the bloom well, and to be in perfection for the show." The many successes obtained by Mr. Dutton on the show tables are proofs that he has been working on the most satisfactory system.

DAFFODILS BY THE TON

The markets are now fully supplied with daffodils grown by the acre on the Scilly Isles, situated about 30 miles from the Cornish coast. Scilly's total area is 3,600 acres of which rather less than 2,000 are susceptible of profitable cultivation. At the present time every available yard adapted to narcissus culture is utilized. The output has steadily increased until at the present time hundreds of tons of cut bloom are dispatched to Britain. By the extensive use of glass the growers are able to cater for the early market, before the Lincolnshire bloom is ready. The flowers are picked whilst the tender bud is still protected by the green sheath and placed under glass, whence they are deposited in bowls and vases and allowed to develop. Lilies are treated in the same way. In recent years the prices have not been what the Scillonian farmer could desire, as the competition is now fiercer than formerly. The growers have tried to cultivate their lilies earlier, so as to have room for a later tomato crop under glass. The industry provides employment for a large army of men, women, and children, who assist in gathering, packing, and despatching the flowers to the various markets. The season lasts from the end of January to the middle of April. The flower growing industry has been a splendid thing for the residents in the islands. Many of the growers had found potato culture unprofitable, and the attention devoted to floriculture, in spite of the drop in prices, has secured an ample reward. The wholesale culture of bloom has enabled the poorest classes in this country to have their homes adorned by the golden harbingers of spring.

W. H. Adsett.

Gloxinias

(See Frontispiece)

Gloxinias are indispensable for greenhouse and conservatory summer decoration; they also furnish a source from which the gayest and choicest of cut flowers can be had. Though easily bruised by rough handling in the cut state or on the plants, and therefore not so well adapted for transportation purposes as might be wished, yet when the necessary care is exercised to ensure their safe arrival where they are to be used as cut flowers they are remarkably long-lasting in cool airy rooms minus excessive draughts.

Gloxinias can be had for decorative as well as for cut flower purposes for many months at a time provided the necessary amount of bulbs are at hand for starting successive batches. Old bulbs are better for the earlier flowering batches, the seedlings taking up the rear of the season, which will be well into autumn. Both seeds and first-flowering old plants should be started, the latter for early June flowering, early in February in a warm moist house of 65 to 70 degrees.

The seeds being small, and the nature of the plants being delicate and somewhat fragile at first, considerable care is necessary to attain reasonable success. Shallow boxes or pans are best to start the seeds in and this holds good for the starting of the old bulbs, too. Clean well decayed leafmould and sharp sand in nearly equal proportions, with powdered charcoal in addition, makes a good medium to sow the seeds on; the seeds should be only pressed in this composition with a smooth surfaced board, and moistened from below thereafter when necessary—that is, the seed pans, as the case may be, in preference should be dipped in a pail of water or any other convenient reception and gently immersed until the soil is moistened. A pane of glass over the seed receptacle is an aid to germination inasmuch as it keeps the seed bed uniformly moist by preventing rapid evaporation. As soon as the seedlings can be conveniently handled they should be pricked off into other pans in much the same compost, otherwise they will quickly vanish with the so-called damping off trouble. Several such transplantings are necessary ere they finally arrive at a sufficiently strong stage to be transferred to pots, or still better for greater results, transplanted in well-prepared cold frames, which, of course, have to be kept closed at first.

Gloxinias are very sensitive to bright sunshine and therefore must be protected with a shade of some kind; the moveable shade, if convenient, is as a matter of course to be preferred. As they arrive at the mature stage and before flowering with their full and normal vigor intact, stimulating waters will be reflected in ampler foliage and nobler flowers.

It is needless to say that as progress towards the maturer stages is made, whether it be seed or old bulbs, that the texture of the soil should be changed accordingly, from the finer compost to an open fibery generously rich one. While gloxinias delight in a genial moist atmosphere when making their growth especially, they do not take kindly to heavy shower baths overhead, and this should be avoided.

Quality
counts in bulb
forcing

A correspondent, replying to a recent editorial in this paper in which comment was made on the remissness of many growers in their methods of bulb forcing, makes the point that the flooding of the wholesale flower markets in early spring with out-door bulbous flowers from the South is so destructive of market values that bulb forcing under glass at that season presents no inducements for special cultural care. As it appears to us these conditions present the very best of reasons for effort to produce something so superior in finish to the ordinary outdoor material that it will hold its own in any discriminating market. We have in mind certain growers who have demonstrated this to their own and the buyers' satisfaction. In bulb forcing as in everything else the best goods will usually command a remunerative price.

"The most
unkindest cut"

Judging from reports received, the notion of dyeing live flowers has already extended far beyond the limits of the odious green carnation which has brought reproach upon so many florists, not only because it is a vulgar debasement of one of Nature's most charming products but also because it is a premeditated fraud. A correspondent of the Journal of Horticulture tells of the purchase at a high price of double daffodils of a blood-orange hue, in a florists' shop, under the name of "Enfield Trophy," which afterwards proved to be nothing but the ordinary daffodil dyed. A story is going the rounds of the papers that in Germany there has developed of late a great demand in certain circles for these denaturalized flowers. We trust the story is overdrawn, but when we learn that at a recent convention of "naturalists" at the Natural History Society rooms in Boston, demonstrations were given of the artificial coloring of flowers, and that "exquisite tints" were produced we are about ready to believe anything concerning the rest of the world.

Nature
and Art

The discussion at the last meeting of the Gardeners' and Florists' Club of Boston as to how far the "naturalistic" style of gardening may be carried in connection with buildings and the formal features of an orderly, neatly kept residence brought out some very pronounced views, diametrically opposite in character, in each case reflecting more truly, possibly, the present footing and environment of the speaker than what would be his sentiments could he be placed in an entirely independent position. From the gardener in charge of a private home estate what could one expect other than an advocacy of faultless lawns, symmetrical plants and scrupulous neatness in every detail? On the other hand the artist, as such, detests these conditions, finding inspiration only where Nature works unmolested and oftentimes greater beauty in the half-dead tree than in the perfect specimen as seen from the gardener's view point. We can hardly look for a modification of views at these two extremes but, all the same, there is a middle and better ground where the fitness of things is the dominant influence and where a proper balance between architectural primness and artistic abandon may be maintained without unreasonable strain. Nature, herself, is constantly working to clothe or remove from sight all rough and dilapidated objects and evidently has no love for ruins. On the other hand, the broad guage gardener will strive at all times for general effect and balance, making individual perfectness and symmetry a secondary consideration in the practice of his art.

Catalogue
Art

Many of the catalogues sent out by dealers in hardy ornamental stock this year are a credit to the nursery trade. Some of them are truly works of art and the seedsmen will have to bestir themselves if they are to hold their own in artistic catalogue making hereafter.

The Codling Moth

(CARPOCAPSA POMONELLA, LINN.)

As the blossoming time draws near the period for spraying to destroy the codling moth attracts attention. Gradually extending its operations over a larger and larger field more orchardmen will have to spray to protect their crops of apples and pears.

The larva or worm which cause the trouble is the young of a small grayish brown moth, having a wing expanse of three-fourths of an inch. The front wings are marked with irregular streaks, lines and dashes of gray. It is seldom seen but can be easily identified by the two large brown spots marked with gold at the end of each fore-wing.

The first brood of moths emerge about a week after the apples blossom and lay their eggs on the leaves. The pear is also attacked seriously and sometimes the prune, plum, peach and cherry.

The pearly white, ribbed eggs hatch in eleven days and the young caterpillar begins to feed on the leaves, then enters the fruit, about eighty per cent. passing in through the calyx end. When full grown (a process covering about three weeks), it is three-eighths of an inch long. Coming to the surface it crawls off to find some convenient place to pupate, making a silken cocoon for the purpose. Three weeks later the moths of the second generation appear and commence laying for another brood.

The second brood reaches the larval stage and then forms its cocoons, hibernating in these placed in cracks and holes of trees, or in storage quarters where fruit is kept.

Where the insect has not gained a foot-hold strenuous efforts should be made to keep it out. It spreads by the moths flying from tree to tree, a slow process, in storage boxes, and in the fruit. Fumigating the boxes and inspecting the fruit will aid in holding down the insect.

There are a number of methods which help in controlling the moth once it has become established.

One is to thin the fruit after it has set, removing as far as possible such specimens as show the presence of the worm. This is done after the first generation have entered the calyx. All infected fruit should be buried six inches deep. Do all the packing in the orchard. Store the fruit in tight buildings so any moths which emerge will be unable to get back into the orchard.

Spraying is the best remedy. It covers the leaves and fruit with a poison which will kill the young caterpillars when feeding. An application just after the blossoms fall to catch the very young while feeding on the foliage, and another two or three weeks later is recommended for the first brood. The second spraying should take place when the young apple or pear is upright with the calyx (the old blossom) open. This lasts a few days and can be determined by watching the trees.

Later spraying may be required if the second brood is numerous. The only feasible method to determine the time is to spray twenty-one days after the majority of the cocoons of the first brood are found.

The poisons used are various arsenical compounds such as Paris green, Scheele's green, London purple, arsenites, and arsenate of lead. The latter gives the best satisfaction, being ready made, easily mixed, practically insoluble (no burning), holds in suspension white in color, and sticks well. Where Bordeaux mixture is used the poison may be carried in this.

Paris green is used at the rate of one pound to one hundred gallons and arsenate of lead (also sold as Disparene) at the rate of five pounds to the same amount of

liquid. The spray must be put on under high pressure to drive a fine mist which will thoroughly soak all parts.

Banding the trunks with cloth or burlap to furnish convenient places for pupation have proved successful on smooth barked trees. These are used in conjunction with spraying or in only slightly infested districts. The bands are of dark colored cloth, ten or twelve inches wide fastened around the trunks and large branches. These are visited at intervals of ten days and the pupating insects killed.

In all work against the codling moth be thorough, be careful, be generous with any spray, and do it on time.

R. Z. Adams.

The Grape Hyacinths (Muscari)

These bulbous plants are not as common in gardens as they deserve to be. They may with freedom be classed amongst the early flowering bulbous plants. In spite of the disagreeable weather, their flowers have been a source of pleasure for several weeks. In a small border, with a southern exposure, which is in front of one of our greenhouses, they began to blossom in March and are still in bloom. Later on they will make an excellent show in the herbaceous border where they have been planted liberally.

The grape hyacinths belong to the lily family and there are about forty species, but not more than one quarter are in cultivation. They are natives of Europe, Asia, and Africa.

In the front row of the herbaceous border they are charming plants giving satisfaction in a sunny position and doing equally well under the shade of trees. Large masses in the rock garden give pleasing effects. They are not fastidious about soil but, if anything, they prefer a light, well drained one. The bulbs are cheap and therefore should be planted in good large colonies, which shows them when in flower to much better advantage than when only a few are planted in a clump. When once planted they may be left for several years without disturbing them. The bulbs are best planted during September or October.

Muscari botryoides, from a gardening point of view, is the most useful. For spring gardening effects it will hold its own with any of the other early flowering spring bulbs. Its flowers are densely arranged on stout spikes eight or nine inches high, and their color is a pleasing blue with the lower ends of the petals tipped with white. The white variety of this species (Muscari botryoides alba) is a charming plant and its spikes of white flowers resemble small white candles rising above the mass of green foliage. This species and its variety are excellent for forcing, and show to best advantage in shallow pans about eight inches in diameter.

The feather hyacinth (Muscari comosum monstrosum) is very distinct and grows nine to twelve inches high. Its flowers are of a mauve color and resemble very much clusters of purple feathers. Rather pleasing when grown in masses.

Muscari racemosum is a common kind which grows vigorously but its flowers are of a duller hue and not quite as pleasing as the other species. Other kinds that are worthy of a trial in a warm sunny border are: Armeniacum, concinnum, moschatum, racemosum, and Szovitsianum.

Robert Cameron

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ROSE SOCIETY.

Some Notes by the Secretary.

The exhibition of the American Rose Society held in Washington, D. C., last month, and the publicity given by the press, has made it apparent that a widely extended interest in the affairs of both rose growers and local societies in various places exists and, aside from organizations or growers, also from people of cultured tastes, who address the secretary for information, show an interest that is widespread and leads me to give some facts pertaining to the working of the society and the preparation for the shows.

Looking over the florists' trade papers, there are dozens of advertisers offering roses of all classes for sale, each one of whom could assist the society as a working popular force by joining as members. The American Rose Society is gaining in a life membership fund, but the sustaining membership is absolutely required, and this may be supported by every rose grower in America without being a burdensome expense to themselves.

A photograph of the exhibition, now before me, gives a fine reproduction of the beautiful effect as one entered the hall at evening with the full effect of the electric lights pouring down over the great square hall with its wealth of color and form that at once took the eye. This photograph gives the permanent impression of the show. But 48 hours before, the secretary, as he faced the same space, all ready to fill up, which the Florists' Club of Washington had worked so hard to make ready, was puzzled when at 5 o'clock the night before the show was to open, a gentleman from New York city said: "This looks well, but what have you got to fill it up with?" At that instant every entry of all degrees counted thirty-seven vases—a drop in the bucket only. A few Washington men gathered and the word was passed, "we will have a show if we have to empty our own houses." Here was a perplexity to those on whose shoulders rested the responsibility of getting up an exhibition; at the last minute they were in ignorance of what was coming and the work of preparation was done on faith.

It was ten o'clock Tuesday night when a despatch came from M. H. Walsh, saying "I am leaving Boston with a carload of Ramblers." This despatch was like General Sherman's signal "Hold the fort for I am coming," then came a despatch from Pierson saying "We have missed a train but will be there with some fine blooms." Wednesday morning, (the show was to open at noon,) came load after load from one and another who had started the afternoon or night before but had sent no word, hence we were in the dark. Three or four who had entered were disappointed at last, but by noon time all doubt had vanished as to a Rose Show. The roses were on hand. The judges, Messrs. Craig, Kasing and Hauswirth, could not begin work until late and at this point I wish to give out to all future exhibitors—try and let whoever is in charge know ahead that you will come.

There is a whole lot of detail work in arranging these shows and such shows as the American Rose Society does put up are worthy of the visitation of thousands of people; the sight is one of beauty. The prizes taken numbered 55. The Dorrance prize trophy was carried off by Robert Simpson of Clifton, N. J. This is the first time anyone has captured that prize; Lord & Burnham's prize was won twice by George Burton and according to the terms of presentation he now owns it. Wm. H. Elliott carried off the first which was put up by Messrs. Moore, Hentz & Nash, of \$15.00 to go to the man who did the real growing; this was John Pritchard; the second prize, \$10.00, went to Wm. Ahlers, who grew for president Robert Simpson.

The number of special prizes offered in Division F and G was 32 and of these 8 were not won. The W. A. Manda prize of \$25.00 in gold is to be won next year. John Breitmeyer & Sons place their \$25.00 in the treasury for next year. Alexander Montgomery's cup remains for next year also. The Hammond prize of \$10.00 for best foliage rose for dooryards remains. This is as far as heard of from the layovers.

The Rose Society, by invitation of the Chicago Florists' Club, goes to that city in March, 1908. We want 1000 rose growers in the big centers and in the villages from east and the west, from the northland and the southland, to join us as associate members and we want to send to each some frequent reminder so as to keep in touch one with the other and when we hold shows hereafter we want the people to come to see them. The best card we had in Washington was to invite the school children with their teachers and the little folk came in flocks; two of President Roosevelt's boys were there and well-behaved and mannered lads, too.

BENJAMIN HAMMOND,
Sec. American Rose Society.
Fishkill-on-Hudson, N. Y.,

AMERICAN ASSOCIATION OF NURSERYMEN.

The Committee on Exhibits are ready to receive applications for space at the forthcoming Convention of the American Association of Nurserymen to be held at Detroit, Mich., June 12th, 13th and 14th, next. Application blanks can be secured from the chairman of the committee and any information required can be secured from him. The committee have decided that no application for space will be considered after the 1st of June, and all exhibits must be in place at the Exhibition Hall not later than Tuesday evening, June 11th.

Application for space must be made on blanks to be furnished by the committee. Exhibits of every character, that will be of interest to nurserymen, are solicited. Trees, shrubs, fruits, implements and machinery and such devices that are or can be used by nurserymen, are especially desired.

The committee are anxious to make this the most complete exhibit ever made at the convention and earnestly

request intending exhibitors to take the matter up with the chairman of the committee as soon as possible, so that arrangements can be made in good time. Members of the Association will confer a favor on the committee by advising them at once of the names of any manufacturer of tools or implements used by nurserymen so that an exhibit can be solicited from them.

THOMAS B. MEEHAN,
Chairman.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The annual sociable and ladies' night of this club was enjoyed on Wednesday evening, April 24, at Horticultural Hall, by a happy company of 160, of whom about one half were ladies. From the start, all preparations for the event had been committed to the care of Treasurer Edward Hatch, past-master in the art of managing such affairs. Efficient committees had acted under his direction and the result was a perfect success in every particular. The display of flowers on the banquet tables, on the stage and the walls was lavish and tastefully arranged. A number of witty mottoes adorned the walls and provided amusement for those interested. Among the donations of flowers were roses from Waban Rose Conservatories, gardenias from W. N. Craig, orchids from Duncan Finlayson, carnations from Peter Fisher, antirrhinum from Wm. Swan, Whitman fern from H. H. Barrows & Son, miscellaneous flowers from Welch Bros., and plants from W. W. Edgar Co. Ed. Hatch presided over the very brief proceedings, which required regulation after he had stood up, clad in a mammoth boutonniere of orchids on one lapel and one of rhododendrons on the other, and advised everybody to fall in and demolish the viands. The only speeches were by President Westwood, Secretary Craig, J. K. M. L. Farquhar, the Mayor of the city of Lowell and his right bower, Mr. Whit-tet. The dinner was one of the best ever provided for the club. An orchestra discoursed good music, and after the tables had been cleared, dancing was enjoyed until midnight under the direction of Floor Manager Peter Miller, previous to which Jackson Dawson sang a favorite song and led the chorus in several popular songs of the olden time.

LENOX HORTICULTURAL SOCIETY.

The regular meeting of the above society was held on April 20, President Heeremans in the chair. The assistant secretary's resignation was accepted with regret, and E. Faucett was elected to fill the vacancy. After adjournment refreshments were served and several of the members entertained by speech-making and singing. Mr. Eustace Jaques presented the society with a magnificent silver cup for competition at the fall exhibition, and was heartily thanked by President Heeremans. The following exhibitions will be held by the society in the Lenox Town Hall: rose and strawberry, June 26; annual and perennial, August 15; the fall exhibi-

tion, Oct. 23 and 24. The schedules are out for the same and can be had upon application to the secretary.

STATE FLORISTS' ASSOCIATION OF INDIANA.

The annual spring exhibit of this society was held at the State House, Indianapolis, on April 11, with a large attendance and a good representation from the growers of the immediate locality in the exhibition hall. Certificates of merit were awarded for carnations to R. Witterstaetter for Afterglow, 91 points; B. K. & B. Floral Co., for Purity, 86 points, and Bertermann Bros. Co., for Seedling 340, 75 points. Other awards were as follows, first and second respectively:

Two pans tulips, M. Nelson, second. Two spiraeas, M. Nelson, first. Display 24 square feet, J. Grande, first. Twelve white roses, The E. G. Hill Company, with Frau Karl Druschki; Smith & Young Company, second. Twelve pink roses, Smith & Young Company, P. O. Tauer, Lebanon, Ind. Twelve red roses, B. K. & B. Floral Company, Richmond; Smith & Young Company. Twenty-five white carnations, B. K. & B. Floral Company, Baur & Smith. Twenty-five pink carnations, Chicago Carnation Co., with Aristocrat; Bertermann Bros. Co., with Mrs. Lawson. Twenty-five light pink carnations, Stuart & Haugh, Anderson, with Enchantress. Twenty-five red carnations, J. D. Thompson Carnation Co., with Robert Craig. Twenty-five carnations, any other color, Bertermann Bros. Co., with Harlowarden; B. K. & B. Floral Company, with Ruby. One hundred double violets, J. Grande. Six plants, lilies, M. Nelson, second. Twenty-five daffodils, J. Grande, M. Nelson. One hundred sweet peas, Baur & Smith.

NEW LONDON HORTICULTURAL SOCIETY.

At the meeting on April 15 the certificate of incorporation was presented for signatures and fifteen names were affixed. After the certificate has been properly indorsed by the Secretary of State a meeting will be held for the adoption of a constitution and by-laws and election of officers. The speaker of the evening was Herman Grove of New Haven, whose talks upon vegetables and roses were practical and interesting.

CLUB AND SOCIETY NOTES.

The Nassau County Horticultural Society at their meeting at Glen Cove, L. I., in April decided to hold the fall exhibition on three days instead of two, November 6, 7, 8.

The premium list for the June exhibition of the Newport Horticultural Society has been received. The show will be held on June 26 and 27 at Masonic Hall. The schedule is liberal, comprising 51 classes for plants, flowers, fruits and vegetables.

TO OUR CANADIAN READERS.

The new Canadian postal schedule subjects us to a rate of four cents a pound in place of one cent a pound, as heretofore, on all copies mailed to Canada. In consequence we are obliged to advance our Canadian subscription price to \$1.50. All subscriptions now on our books will be carried at old rates, however, until completion.

THE CARE OF STEAM BOILERS.

In the rush of spring work the boilers are very often neglected. Other things demand immediate attention, and with the thought that the season for firing is almost ended the boilers are left to some more suitable time. Preparations for shutting down the boilers ought to begin at once, for cleaning the interior of them will be easier later on if the work of getting them in shape is started now. With the fires banked through the day there is greater danger of the boiler wearing out than if it was being run. Pitting is the most dangerous thing we have to guard against. Some waters have a tendency to increase that form of weakness more than others, and if precautions are not taken, pitting will be found to have increased more in an idle boiler than in one in use, and steel boilers are more to be feared than iron, as the steel seems to pit very easy. Soda ash, I find, is the best preventive, both for pitting and scale. From five to ten pounds (according to size) put in a boiler now will save much trouble and expense later on; besides keeping the boiler clean, it will also keep the heating pipes from rusting inside.

I suppose every one has had trouble with the nut of the handhole plate in the back of the boiler. Sometimes it is very troublesome getting the nut off the thread, the heat in the combustion chamber being so great that the thread on the stem is burned, and getting the nut on and off is no easy matter. A cloth soaked in kerosene put over it assists very much, but often there has to be a new stem put in the plate. There are two ways I know of which overcome this difficulty. One is getting a cast iron nut which can be broken and the plate then taken off, but I find the best way is, when putting the plate on in the fall, to get some asbestos, wet it with water, beginning at the boiler and working out to the point of the stem, covering up everything; it will be found that this has kept the thread and nut away from the direct action of the flame, and with the application of some kerosene the nut will come off and the threads will be found uninjured. This is inexpensive and practical. I put in applications of soda ash every three or four weeks during the firing season, about two or three pounds at one time, and run off about one gauge of water once a week, doing this while there is no steam on.

In laying a boiler off for the season I find the best way is to cool the boiler, and when thoroughly cold run off the water, open handholes and manhole, and with a hose wash every part of the inside, using all the pressure possible. When all cleaned out, force the hose down the blow-off pipe and wash that out thoroughly, for should there be any scale it may be caught in the seat of the blow-off valve and cause trouble. Begin under the boiler, take out every particle possible of soot and ashes, sweep the inside walls down with a broom and up along the sides of the shell where it cannot be reached by hand, brush out the tubes, then begin with a hard scrubbing brush, scrub the shell and heads (dry), going over with a cloth, wiping off any dust that may be left; then thoroughly sweeping everything back to the combustion chamber floor, where it may be easily taken out; close the damper

in the chimney, open the front cleaning-out door, and your boiler is ready to lie safely idle all summer. I know from experience that the above work is far from being clean, but the results are satisfactory afterwards, and a bath will wash off anything that may have stuck to you while the work was being done. R. T. MCGORUM.

HIMALAYAN RHODODENDRONS.

Editor of HORTICULTURE:

I deem it proper to call your attention to an evident misprint in your issue of April 13 in connection with the parentage of *Rhododendron* Mary Weld which reads "Princess May Fitzwilliam." Also to a misconception of my own given on the spur of the moment when asked to name its parentage, which I gave as Princess Mary Fitzwilliam which should be Lady Mary Fitzwilliam and *Rhododendron* Veitchi *laevigatum* variously termed Veitchi or Veitchianum. Under the former term a fine photographic picture of this parent is given in the *English Garden*, Vol. XXX, page 237, 1886.

According to some authorities *laevigatum* as applied in this instance indicates the varietal distinction of having the petal edges of the corolla smooth instead of being frilled or undulated. Notwithstanding that, I got this varietal *rhododendron* from Messrs. Veitch, if my memory serves me right, under the above name, but according to definition as above stated I must have had the plain Veitchi, for the petal edges are decidedly wavy or frilled. I want to emphasize this, as it is in this particular that the newcomer is chiefly distinguished from its seed-bearing parent, Lady Mary Fitzwilliam, the flowers of *Rhododendron* Mary Weld showing plainly the crumpled edges of the pollen parent's petalage with their more waxy texture, and a decidedly larger and deeper yellow suffusion in the throat of the individual flower, devoid also apparently of any taint or suspicion of pink that generally is observed in the petalage of the seed-bearing parent.

In other respects the foliage and habit seem to be identical with that of the mother parent, but age may change this somewhat, as *Rhododendron* Veitchi is much more robust and arboreal in stature and habit than the other.

The delightful fragrance characteristic of the Himalayan section of *rhododendrons* under consideration is very marked; the foliage is very distinct too from the so-called *Javanicum* section, the former being characterized by a leathery rugose Indian *azalea* leafage including the pronounced fragrance alluded to, arising largely from the blood of *Rhododendron* Edgeworthii, the latter being a half parent of an earlier beautiful hybrid, Princess Alice. The *Javanicum* section as a rule has smooth leaves somewhat resembling the common hardy *rhododendron*, but of course smaller.

Amongst the newer and older hybrids are to be found some of the finer gems of the floral kingdom.

KENNETH FINLAYSON.

Take out the geraniums and salvias from my advertisement. Through this advertisement in HORTICULTURE I have disposed of my surplus stock of both. R. L. GOINSALVOS, Waltham, Mass.

HARDY OUT-DOOR ROSES.

(Paper read by David McFarlane before the Tarrytown Horticultural Society.)

Hardy out door roses is a theme which interests to some extent most men in the profession, and I may safely add and more of the flower-loving public than any other flower topic.

George Nicholson says "The rose is justly designated the Queen of Flowers." We will concede that from the most ancient period this Queen of Flowers has won all her laurels meritoriously, and treat on her adaptability to satisfy the whims and fancies of this modern and fickle public. The so-called hardy outdoor roses, with but few exceptions, possess extremely poor qualities for the general embellishment of the landscape from an artistic point of view, consequently we cultivate the majority because of their excellence for house decoration as a cut flower and their unique colors, fragrance, purity and individuality. So many are the varieties of roses now in commerce that to make a selection is no easy task, and as the most have been hybridized in France, Germany and Great Britain, many that carry the highest honors in the lands of their birth are a sad disappointment when grown under our more extreme temperature. Yet, if a collection of, say, three hundred well selected varieties were once established on a place the chances are that not one of them would ever be discarded, for we might say, especially of Hybrid Perpetual roses, that the color and form of one variety is so near in resemblance to another, and yet so distinct, that we decide to keep both because of their characteristic individuality.

The grandest of all rose blooms are found in the class generally designated as Hybrid Perpetuals, but the word Perpetual applied to the blooming of these roses, I regret to say, is very much in error in our climate. While a bloom or so may be found later in the season we have to console ourselves with the fact that the flowering season for these roses is during three weeks in June. If this fact alone were judiciously taken into consideration it would eliminate many a rose garden from such a prominent position in the landscape, while at the same time detract nothing from the general interest displayed in the rose. The best place for a rose garden is one that cannot be seen from any distant point, but one where a host, or hostess can guide his or her guests and land them by surprise among the rose beds or under the arbor in the season of bloom, and while the plants are at work preparing for next June they will not be critically commented upon for their rustic looks.

The rose is a strong feeder and is best suited in a heavy moist, but well drained soil, and if they can be planted with a shade from the east but by no means an overhead one—so that the dews will hang on until 9 or 10 A. M., so much the better, as I consider this the best location for roses. The best time to plant hardy roses is in the fall, about the first or second week in November. In planting be sure that the graft is well buried; in strong growing varieties I recommend a depth of seven or eight inches, and

the weakest growers should not be any less than four inches below the normal surface of the soil. Roses planted at this time should be laid down at once and covered over with three or four inches of soil; in that way they will keep over the winter and turn out plump and fresh in spring.

If it is compulsory to plant roses in spring have it done just as early as the ground will permit, for there is no plant that I know of suffers from late planting as much as the rose. Should your plants show the least signs of shrivelling when received in spring, dig a trench and cover them entirely with about eight inches of soil for three or four days and, unless they have been all the more dried out, you will generally find the wood and buds quite plump when you lift them from the trench. If any wrinkles remain on the bark the chances are that these plants will die, and should they survive the growth, will be extremely poor for the first season.

The last week in March or first week in April is generally the best time to prune Hybrid Perpetual roses, as at this time all danger from damaging frosts is past, so that we can spread what covering has been used for winter protection, and after the pruning is done give a good loosening up of the soil with a spading fork and they are ready to start work. Few gardeners prune their rose bushes close enough; with but a very few exceptions I prune down to from one to four inches of the soil and these exceptions are only such roses as Margaret Dickson, General Jacqueminot and Prince Camille de Rohan, which are apt to run blind on the extra strong shoots from the bottom. Even with these varieties care should be taken to cut out all two-year-old wood close to the soil.

If the manure used for protecting during winter is dug in in spring no additional fertilizer need be applied until the 20th day of May, when liberal application of some stimulant—pure bone meal, a good grade of commercial fertilizer, or liquid manure from the barn yard, which ever is convenient—is of great benefit, and should the weather be dry from this time until the flowering period is well over, the ground should be well saturated with water, and where the soil is very light a mulch of from four to six inches of litter or cut grass is good to retain moisture and also to keep the roots cool, although it adds nothing to the beauty of the beds. I would prefer litter instead of the grass as a mulch, as I have seen the grass during a dull spell create a bad dose of mildew. If a mulch has been used up to and through the flowering period it should be removed early in July and the beds kept well cultivated from then until October.

The best way to grow Hybrid Perpetual roses for cut bloom is in rows in the garden, and I would advise everyone to give them plenty of room between the rows, three feet or more; they may be set fifteen to eighteen inches in the rows—this enables you to draw up the soil to the heel of the plants for winter protection before placing the manure around them. Another advantage it lends in spring is that when you remove the manure the cavity in the centre will hold quite a lot of it, where it can be deeply forked

in; this will cause fresh root action over a wide space. As the root is the driving power for the top and our aim is to produce a good bloom on a long stem with good foliage, I have never seen this method fail even on light sandy soil.

Most men who have written on the rose advocate the soil to be left good and firm and only forked up to a depth of a few inches in the spring. This is contrary to my experience for good results, as I never hesitate to put the fork as far in as the foot will send it, seven or eight inches away from the neck of the plant. No doubt by this operation a great many roots are broken, but it is at a time when the plant is dormant and we have just cut all of its top away and I think that the young roots will work through the loose soil with a vigor that will soon more than compensate for the rough pruning they have received.

Hybrid Perpetual roses should not remain undisturbed more than seven or eight years, after which they should either be replaced with young two-year-old stock or else carefully lifted, placed over a chopping block and all the thick fiberless roots removed with a sharp hatchet. Roses treated in this way are in many cases as good as younger stock. Care should be taken not to treat all in one season as Hybrids give very poor results the first season after being planted. Roses grown for cutting or exhibition purposes should be disbudded, leaving only the strongest bud on each shoot, which is generally the center one, and, where roses are grown especially for exhibition, the small weakly shoots may be removed at an early stage, although the latter is seldom necessary where the operation of pruning has been perfectly performed in early spring, for in that operation no wood should be left that is likely to throw up a weak growth.

The following are varieties that I have found worthy of a place in any collection. I will not try to describe their colors in shades. I might here make a suggestion for The American Rose Society, of which one of our esteemed members is ex-vice-president, to take up and see if a standard color chart could not be produced. I think it would aid compilers of catalogues in describing varieties in a more satisfactory form to their patrons: White—Frau Karl Druschki, Margaret Dickson, Merville de Lyon, Mabel Morrison, Jules Finger, White Baroness, Merville de Blanchess, Helen Paul, and Clio. Pink—Mrs. John Laing, Mrs. R. G. Sharman Crawford, Mrs. Frank Cant, Mme. Gabriel Luizet, Pride of Waltham, Robt. Duncan, Paul Neyron, Paul's Early Blush, Marguerite de St. Amande, Marchioness of Dufferin, Lawrence Allen, Jeannie Dickson, Ellen Drew, Magna Charta, Abel Grand, Alphonse Soupert, Baronne Prevost, Baroness Rothschild, Duchess of Edinburgh, Francois Michelin, Jules Margottin, Mme. Eugenie Verdier, Duchess of Fife, Duchess de Vallombrosa, Dupuy Jamain, Duchess of York, Mme. Geo. Paul, Marquis de Castellane, Mrs. Cocker, and Mrs. Harkness. Red and other shades—Ulrich Brunner, Jubilee, John Hopper, Jean Liabaud, Jean Soupert, John Bright, Lady Helen Stuart, Longfellow, Lord Macaulay, Lord Frederick Cavendish, Madam Ferdinand Jamain, Eugenie Verdier, Louis Van Houtte, Horace Vernet, Grand Mogul,

Gloire de Margottin, Gloire de l'Exposition de Bruxelles, Earl of Dufferin, Earl of Pembroke, Eclair, Exposition de Brie, General Jacqueminot, Fisher Holmes, Prince Camille de Rohan, Paul Verdier, Paul Jamain, Pierre Notting, Mrs. Jowitt, Mrs. Harry Turner, Star of Waltham, Victor Hugo, Victor Verdier, Tom Wood, Waltham Standard, Mlle. Annie Wood, Marie Baumann, Marie Rady, Maurice Bernardin, Mlle. Suzanne Marie Rodocanachi, Mme. Chas. Wood, Mme. Lelievre Delaplace, Duke of Connaught, Duke of Edinburgh, Duke of Fife, Countess of Oxford, Chas. Lefebvre, Chas. Lamb, Captain Haywood, Bob Davison, Bruce Findlay, Ben Cant, Baronde Bonstettin, Prince de Portio, Abel Carriere, Alfred Colomb, Anne de Diesbach, Chas. Margottin, Eugene Furst, Francois Levet, and Marshall P. Wilder. No collection of roses is complete without a few of the Mosses. They require the same treatment as the Hybrids. The following I have found the best: Common Moss, Crested Moss, Gracilis, Little Gem, Muscosa Japonica, Crimson Globe and Blanche Moreau.

For rose beds in prominent places I would recommend the following varieties: Pink and White Mme. Cochet, Grace Darling, Viscountess Folkestone, Safrano, Hermosa, Gruss an Teplitz, and the Polyantha Baby Rambler. A whole bed of one variety is always more effective than any attempt to mix them, and a suitable edging of sweet alyssum, verbenas, or any low-growing continuous flowering plants will help show them off. All decaying blooms should be frequently picked off and they should always be gone over after a heavy rain. These roses, with the exception of Baby Rambler, are either Tea or Hybrid Tea, consequently are not so hardy as the Hybrid Perpetuals, and should be extra well protected during winter. They should not be pruned nearly so far back in spring.

No class of rose has gained in popularity in the last fifteen years as has the climbing roses. This I may say is due to the adventitious Crimson Rambler, which is now no more a stranger to the humble cottager than the millionaire, but the Crimson Rambler may justly be credited with the stimulant she created amongst hybridizers, the results of which are now demonstrated to us in a vast variety of sterling merit of which the Yankee hybridizer deserves a good share of the credit. For covering arbors, trellise, fences, pillars, or planting along side of buildings and high walls in conjunction with other climbers, nothing is more effective than these Rambler roses. The best and hardiest varieties are found in the Rambler or Polyantha class, although some of the Wichuraiana hybrids are extremely useful for this purpose, but some of them cannot be classed as hardy roses, many having too much Tea blood in them to be able to stand our winters. I have seen large plants of Gardenia, Jersey Beauty and Evergreen Gem completely killed with a moderately cold winter. They are better adapted generally for covering banks and low projecting rocks, and when mixed with honeysuckle are extremely valuable for landscape work. The following are good varieties of climbing roses: Dorothy Perkins, Lady Gay, Dawson,

HOUSE OF LETTUCE AT IRONDEQUOIT.

This illustration shows the new house, 76x240, on the garden farm of Frank Titus. Irondequoit, N. Y. Its

capacity is 50,000 heads of lettuce. The boiler is 150 horse power, consuming 100 tons of coal per season. Built by King Construction Company.

Leuchstern, Psyche, Crimson Rambler, Sweetheart, Debutante, Lynch's Hybrid and White Wichuraiana. Pillars and various shaped trellises may be covered with roses in the front and rear yards of the small cottager, and many of the strongest growing Hybrid Perpetual varieties, as well as the so-called pillar roses, may be used for this purpose. Some of the best are Baltimore Belle, Queen of the Prairie, Gem of the Prairie, General Jacqueminot, Mme. Plantier, Magna Charta, and Marshall P. Wilder. Climbing and pillar roses must not be cut far back in spring, but the oldest wood should be cut out occasionally, and this is best done just after the flowering period, taking care that you have a good young growth from the bottom for every old one you cut out. All that will be necessary in spring will be to cut back to suit the space desired to be covered.

Some varieties of roses may be used for hedges, but I think there are other plants that adapt themselves better for this work of the rose. The best rose for this purpose is the Hybrid China, Mme. Plantier, although some of the Austrians, of which Persian Yellow is the best, may also be used. Rosa rugosa can vie with the best of flowering shrubs for ornamental mass planting, of which Alba and Rosea are the best. These should also be cut well back in spring and induced to throw up strong shoots from the heel.

The rose, like all other good things in floriculture, has its bug enemies. White scale or rose scale is often troublesome on climbing, pillar, or standard roses, where the wood is over a year old it is generally worst. A thorough spraying with Pratt's Scalecide, one portion of Scalecide to twenty of

water applied with a fine nozzle in late fall or early spring will kill this pest. Caterpillars must be carefully guarded against. I generally find one application of powdered hellebore sufficient to keep these in check. This should be applied about the 20th of May. The best way I find is to use it in liquid form, one tablespoonful of hellebore to fourteen quarts of water sprayed on during the afternoon of a bright, dry day. One should not wait until reminded by the half-eaten leaves before using hellebore, as the caterpillars are sure to visit you about the time I have stated. Another great enemy of the rose is a little white thrips, but this seldom attacks roses in the open garden, but look out for your climbers on buildings or pillar roses if in any way shaded by trees. I find strong applications of tobacco water the best for keeping this thrips in check, but generally it has to be repeated at intervals throughout the season, commencing about the 10th of May. Aphis is sometimes troublesome. If so, tobacco just applied late in the evening is the surest remedy. But, gentlemen, the worst of all bugs that we have seen in late years is the genuine Rose Bug that devours the finished product and has vexed all admirers of the rose along this section of the Hudson river for the last two years. I have seen arbors of roses with the blooms literally covered with these bugs, and scarcely one bloom free from its ravages. Killing by hand seems to be the only way to destroy this pest, but even this is small satisfaction, for we are unable to save our blooms. If I could prescribe a remedy to eradicate this pest this paper would have been at least worth the ink that has been spilled upon it.

SEED TRADE

While California and the Pacific Coast generally have been deluged with rain, there has been a more or less extended drought in the middle west which has threatened seriously the prospective winter wheat crop, and if it continues much longer will affect the seed growers particularly in the matter of the sugar corn and vine seed crops. There is no immediate cause for anxiety, and perhaps it may be well not to borrow trouble, but in view of many predictions of crop shortage due to drought it is simply referred to here.

News from California the past week is of a negative character yet there has been some improvement in conditions in the onion belt. It will be sometime however before a reliable forecast can be made of the real situation.

The protracted cold weather is having a more or less harmful effect on retail seed trade in New England generally, and in fact New York State and even Philadelphia, and it looks now as if the closing months of the season will be somewhat disappointing. The indication of an early spring so promising in March, have proved disappointing, and while trade on the whole is, and has been good, the season taken altogether will be somewhat unsatisfactory.

The "green bug" which is just now such a cause of anxiety to the wheat growers of the west, is only our old friend the "pea louse" or Aphis. The fact that this pest can destroy millions of acres of growing wheat shows how destructive it can be, and it prefers peas to wheat, showing a fine discriminating taste. It may yet be heard from among the pea fields of Wisconsin and Michigan.

There seems to be no "wrong side" of the street for J. M. Thorburn & Co., as they report a larger business than ever before. Their clientage is a most loyal one, and is the cause of just pride to this reliable old house. Verily square dealing brings its own reward.

The many friends of Rennie & Thompson hope and believe their embarrassment will prove to be only temporary. Reasonable indulgence on the part of their creditors will no doubt enable them to weather their present difficulties, and as they are two exceptionally energetic and bright young men it is generally agreed that if they can tide over the present crisis their future is assured. It is understood that their troubles are mainly due to the shrinkage in value of certain securities which they had pledged as collateral for loans, but these will no doubt advance again to the level of values when they were pledged. This firm is only one of thousands which have felt the effects of the late monetary disturbance.

We learn from Columbus, O., that the seedsmen have been having a comparatively slack counter trade for April, although mail orders continue steady and in fair volume, and that it begins to look as if even seasonably warm weather would fail to start a rushing trade again this year, as it is

now so late in the season. The weather still continues very raw and cold.

CATALOGUES RECEIVED.

F. M. Pattington, Scipioville, N. Y.—Market garden seeds and plants.

J. W. Howard, Somerville, Mass.—Hardy plants, bedding plants, bulbs and seeds.

Huntsville Wholesale Nurseries, Huntsville, Ala.—Wholesale price list, for the trade only.

S. J. McMichael, Findley, O.—Wholesale Trade list of Vegetable, Greenhouse and Bedding Plants.

D. McNallie, Sarcoxie, Mo.—1907 Catalogue and Price-list of Strawberry Plants. 75 varieties listed.

Chattanooga Nurseries, Chattanooga, Tenn.—1906-07 Catalogue of Fruit and Ornamental Trees and Shrubs.

Continental Nurseries, Franklin, Mass. Wholesale list of herbaceous plants, evergreens and deciduous shrubs.

George S. Josselyn, Fredonia, N. Y.—Condensed price-list of grape vines, currants, gooseberries, etc., for spring of 1907.

C. H. Totty, Madison, N. J.—1907 List of Chrysanthemums, Roses, Carnations and Moschosma riparium. Illustrated.

Mt. Arbor Nurseries, E. S. Welch, Prop., Shenandoah, Ia.—Illustrated and Descriptive Catalogue of fruit and ornamental trees and shrubs.

F. W. Dixon, Holton, Kan.—20th Annual Catalogue of Strawberries and other Small Fruits. Contains practical directions on strawberry culture.

Pleasant Valley Nurseries, Arthur J. Collins, Prop., Moorestown, N. J.—Fruit and ornamental trees, perennials, etc. Contains a useful spray calendar.

T. S. Hubbard Company, Fredonia, N. Y.—Descriptive list of Grape Vines and Small Fruits. Illustrated with some superb half-tone grape portraits.

R. M. Kellogg Co., Three Rivers, Mich.—The New Horticulture; great crops of strawberries and how to grow them. Very interesting and convincing.

Winfield Nurseries, Winfield, Kans.—Descriptive Price-list of Fruit Trees, with colored plate of Japan Blood Dwarf Peach. Also Surplus and Want List, for nurserymen only.

Conrad Appel, Darmstadt, Germany. Spring catalogue for 1907 (118th year). List of valuable forest tree and grass seeds. Contains many interesting illustrations, and a complete crop report for the season.

Elm City Nursery Co., New Haven, Conn. Catalogue and price list for 1907. A miniature encyclopaedia of desirable ornamental trees, shrubs and herbaceous plants. The cover is both unique and rich.

Shatenuic Nurseries, Barrytown, N. Y.—"Select Plants for the Garden Border." This is an elegantly printed little catalogue of 32 pages and cover, finely illustrated. Tritoma uvaria forms a spirited cover illustration.

Thomas Meehan & Sons, Inc., Dresherstown, Pa.—Meehan's Manual of Outdoor Plants, 44th Edition. Also Wholesale Trade List for Spring, 1907.

A very complete list, containing a colored plate of the variegated-leaved althaea. Cover in imitation of birch bark.

Peter Lambert, Trier, Germany. List of new roses for 1907. This includes the introductions of the English and continental raisers, and six of American origin, in all classes of hardy and tender roses. The Hybrid Teas comprise nearly one-half of the entire number listed.

Frederic J. Rea, Norwood, Mass.—Hardy Flowers, 1907. A catalogue of popular hardy herbaceous perennials, roses, shrubs, vines, etc. A carefully compiled list giving botanical name, common name, color, height, season and price in tabulated form. Many rare species are included and this neat little work is full of instruction for the garden enthusiast.

Biltmore Nursery, Biltmore, N. C.—List of Ornamental Trees and Shrubs and Border Perennials. No expense has been spared to make this the finest publication of its kind. The illustrations are marvellously beautiful showing the fine art of photographer, engraver and printer in rare perfection. One can almost catch the fragrance of the wild roses, honeysuckles and nymphaeas as the pages are turned. A heavy cover in dull grey-green on which is represented a spray of Cornus florida adds to the attractiveness of the book. As to the contents they comprise everything worth planting in the hardy garden.

STATEMENT OF PLANT IMPORTS.

There were entered at the port of New York during the week of April 15 to 22, inclusive, the following plants:

From Holland: H. F. Darrow, 4 cs. plants; McHutchison & Co., 58 cs. do., 2 bales do.; P. Ouwerkerk, 36 cs. trees; S. Stern, 15 cs. plants; Sundry Forwarders, 66 cs. do., 67 cs. trees.

From Belgium: Lager & Hurfell, 2 cs. plants; P. H. Petry & Co., 1 cs. do., 16 tubs laurel trees; August Rolker & Sons, 25 cs. plants; J. Ter Kuile, 2 cs. plants, 12 tubs laurel trees; Sundry Forwarders, 117 cs. plants, 101 cs. trees and plants, 30 tubs laurel trees.

From France: McHutchison & Co., 12 cs. plants; Siebrecht & Sons, 1 cs. plants; Sundry Forwarders, 16 cs. trees.

Via Southampton: Rooney & Spence, 3 cs. plants; Vandegrift & Co., 1 cs. do.

From Germany: E. L. Boas, 3 cs. plants; F. Hollender & Co., 4 cs. do.; Chas. F. Meyer, 4 cs. do.; Sundry Forwarders, 23 cs. do., 2 baskets do.

PUBLICATIONS RECEIVED.

Proceedings of the 52nd Annual Meeting of the Western New York Horticultural Society, held at Rochester, N. Y., January 13 and 14, 1907. This is a very complete and interesting report, full of valuable knowledge and experience as contributed by the great fruit growing industry of the Empire State. Secretary John Hall records that the society membership has now, for the first time passed the 1000 mark. A portrait of the late George Ellwanger forms the frontispiece of the book.

Second Annual Report of the Superintendent for Suppressing the Gypsy and Brown-tail Moths, by A. H. Kirkland, Boston, Mass. This book gives a carefully prepared account of the last year's work as accomplished by the official staff and by local authorities and citizens generally throughout the State of Massachusetts. The report fills 170 pages, and is copiously illustrated, two colored plates included. Microscopic pictures of the effect of the brown-tail hairs on the human skin will be found especially interesting. This report may be had on application at the Public Document Room, State House, Boston.

Arbor Day, Massachusetts, 1907.—The pamphlet issued last year met with such an appreciative reception that it was thought best by the State Board of Agriculture to continue the publication for this year, and the edition has been increased to 3,500 copies mainly for the use of the public schools. Some of the contents are Need of an Arbor Day in Massachusetts, by Prof. F. W. Rane, Forestry Work of the Women's Clubs, by Helen A. Whittier, How to Protect Trees from Insects, by Dr. H. T. Fernald, Why Children Should be Friends of the Birds, by E. H. Furbush and several pages of general information, selections and suggestions. There are a number of instructive half-tone plates.

BEDDING PLANTS.

Notes on propagating and culture from paper read before Detroit Florist Club, by R. W. Unger.

Phlox, verbenas, zinnias, antirrhinum, delphinium, pentstemon, nicotiana, etc., should be shown about the last week in March, in cold frame, with just enough manure to keep frost out. Sow them in a good rich soil, with a top mixture of sand, as this will keep the soil sweet and prevent the seedling from damping off during moist and cloudy weather. In this way the seedling, with a cool bottom, sown rather thin, can stay until time for planting arrives, without extra transplanting; that is, if the seed is sown too thick, it is well, or rather necessary to transplant into another bed in order to keep them dwarf and healthy.

Ricinus can be sown singly in small pots and transplanted as desired. Oxalis should be sown in flats, about the end of March or beginning of April, and transplanted as need be. Centaurea gymnocarpa and candidissima and Cineraria maritima, should be sown as early as December, on account of their slow growth. As soon as they are up, transplant and keep in a cool house if possible, on a shelf near the glass. About February, plant into small pots, and as soon as possible transfer to the hot-bed.

Begonia Vernon is also best grown from seed. Sow in flats about February, and transplant as soon as possible and keep in warm house. It is rather tedious to first transplant begonias on account of their smallness, but the sooner this is done, the better is for the seedling. When large enough, plant in small pots.

Alternanthera it is best to overwinter in old plants; about March, pull them apart and plant on warm bottom in hot-bed, and as soon as the young growth starts, cutting can be had in abundance. These can be stuck in a sandy hot-bed where they will grow freely and also can be easily used for bedding right out of the frame.

Geraniums are best propagated in fall or during winter, so as to get plants of proper size. Coleus should be kept in a rather warm house during winter; about the beginning of April, cuttings can be made. With a little bottom heat, they will root freely and will make about the right sized plants for bedding.

Sedum and mesembryanthemum can be made at any time during winter. Echeveria should be taken up in fall and whatever young plants there are, should be taken off and planted in flats. Keep them in a dry, cool place during winter and increase watering as the season advances. Stevia, lantana, gnaphalium, cuphea, ageratum, salvia, heliotrope, etc., can be propagated at any time after February. Canna bulbs should be kept in a dry, cool place. About March the bulbs can be divided and laid in sand; when rooted, plant in pots ready for planting. Dahlias are treated about alike, only need not be started as early. Caladium esculentum bulbs are kept best in sand in a warm house and started about April.

HERACLEUM MANTEGAZZIANUM.

(Translated from Moller's Deutsche Gartner Zeitung, by G. Bleicken.)

In *Heracleum Mantegazzianum* we possess a biennial foliage plant, which is perhaps the best and the largest of its kind. It comes from the Caucasus and is best used as a solitary plant upon a lawn in a half-shady place in which location it will also thrive best.

If *heracleum* is planted as a one-year-old seedling it attains a height of fully two feet, its foliage appearing nicely serrated and with a dark metallic gloss. In ornamental effect the plant may be compared to a large *acanthus*.

In the second year this plant will reach maturity and attain a height of about ten feet, measuring in circumference about eight feet. It should bear a flower stalk with twenty or more cream-colored flower clusters.

(The original of the photograph shown in Moller's D. Gt. Ztg. had, it is stated, twenty-four such clusters, each a foot in diameter.)

Heracleum Mantegazzianum, like all of its class, dies down slowly after flowering at the end of August; this may be one objection to its general culture, but may be a little averted, if the flower stalk after the wilting of the clusters is cut off.

PITTSBURG NOTES.

The display of spring flowering plants at the Phipps Conservatories continues to attract large crowds daily. On Sunday, April 21, 25,000 people visited the greenhouses. The cool weather since Easter has been favorable to the flowering plants. Many plants have been kept in reserve, and although the display is not quite so good as on Easter Sunday, the greenhouses are well worth a visit.

At the Lauchlan place many alterations and improvements are being carried out. A large cave for wintering bay trees, hydrangeas, etc., is being built. Some fine specimens of dwarfed Japanese evergreen trees supposed to be 150 years old have just been received. The palm house, besides some fine specimens of palms, contains a choice assortment of tropical plants. There is also a large plant of *Philodendron pertusum* (bread fruit tree) in fruit. Mr. Price, the head gardener, is an orchid enthusiast, and has some good things in the orchid line. The greatest treasure is a plant of *Laelia lobata* in a 30-inch pan. This plant, which is probably the largest *Laelia lobata* in this country, has about fifty leads, each of which is showing a flowering sheath. Last year the plant had over eighty flowers. At the Barnsdale place, one of the finest places in the neighborhood for shrubs and hardy plants, Mr. Lily is making extensive alterations and planting hardy flowering shrubs. Large groups of hybrid rhododendrons have wintered well. J. H.

FOR SALE

Specimen *LATANIA BORBONICA*, in twenty-nine (29) inch cypress boxes, having from nine (9) to eleven (11) leaves a foot with about ten foot spread. Also smaller plants in seventeen (17) inch cypress boxes, having nine leaves and a spread of about six to seven feet.

FRUIT PROSPECTS IN WASHINGTON STATE.

While the fruit growers in Washington received more than \$12,500,000 for their tree, shrub and vine products in 1906, reports received by F. M. Huntley, State horticultural commissioner, indicate that the crop this year will break all records by large increases; in fact, he places it at 50 per cent. larger than in 1906.

"Frosts and cold snaps, so injurious to delicate trees, were not known," he says, "and on that account the spring indications are for a full crop. The apple season was off last year, and unless unforeseen weather conditions occur late in the spring, apple trees, meager of fruit last year, will yield a bumper crop this season. The crop of fruit of all kinds grown this season will be considerably augmented by the yield of a large number of trees that will now begin to bear. According to figures submitted, 10 to 15 per cent. of new trees will yield a harvest this year.

"No one district is making a more rapid advance than another, and all irrigated districts are keeping pace with each other. Trees have been received in the State all winter, and more will be set out this year than ever before. Many of the old districts have been pretty well planted, but as fast as one section becomes an orchard another springs up to take its place, and there is continual improvement as far as horticultural conditions are concerned."

FIRE RECORD.

Albert Davis of Alliance, O., lost one of his greenhouses by fire on April 1. Three hundred dollars is the loss reported, with no insurance.

THE MOTH CAMPAIGN IN RHODE ISLAND.

The College is in receipt of a large number of specimens of insect cocoons from various parts of the State with a query as to whether they are not either the gypsy or the brown-tail moth. A large majority of the cocoons have been those of the *Prometha* moth, *Callosamia prometha*, an insect which has been with us for years but which is seldom materially injurious.

The cocoon is invariably formed in a folded leaf, the edges of which, together with the petiole and the twig to which it is attached are strongly bound with silk. Inside of the leaf is a firmly woven cocoon which holds the pupa or resting stage of the insect. The leaf may sometimes wear away during the winter but its presence at the time of formation will still be suggested by the form of the structure.

It is to be hoped that the people of the State will continue to send in all suspicious insects, for only in this way can we hope to keep track of, and possibly also prevent the spread of notably injurious ones, and especially the gypsy and brown-tail moths.

Insects when sent in will gladly be identified whether injurious or not.—*Extension Department R. I. Col. of Agr. & Mech. Arts, Kingston, R. I.*

INCORPORATED.

PHILADELPHIA NOTES.

We regret to report that our brave bowlers got the worst of it again in a three-cornered match with Washington and Baltimore on the Casino Alleys, this city, on the 19th inst. The concluding match will be held in Baltimore.

Edwin Lonsdale will move his residence from Wyndmoor to West Philadelphia in the near future.

It is reported that W. C. Smith has been offered \$135,000 for his property at 61st and Market streets, and is very much tempted to accept and go to growing plants in some less expensive locality.

C. MacKubbin of Dreer's has moved his residence from Morton, Delaware Co., to Germantown.

August Fredericksdorp makes a specialty of sweet peas, lupins and snapdragons, and returns the past season have been unexpectedly satisfactory.

OBITUARY.

Franz Kjellman, professor of botany at Upsala University, Sweden, died on April 22.

Edward W. Fenn of Terryville, Ct., died on April 14. He leaves a widow and one son.

Edward Tonquest, who about a year ago left Kansas City, Mo., for Colorado in search of health, died in Canon City, Colo., on April 7.

W. Louis Kidwell, aged 18, son of Wm. H. Kidwell of Chicago, died on April 16. He had returned to his home from New Mexico but a few days previous, having gone there to recover his health.

NEWS NOTES.

It is estimated that \$500,000 damage has been done to fruit trees in the Arkansas valley by the snow storm of April 17.

A. J. Stahelin of Sand Hill, Mich., will this year start to grow violets. Detroit hopes he may be successful as a local violet supply is needed. Fred Pautke of Grosse Point will erect one house 10x200 ft., also for violets.

The 200th anniversary of the birth of Linnæus occurs on May 23 of this year. Celebrations commemorative of the work of the great botanist will be held in Upsala, Sweden, and many other places throughout the world.

The grounds about the William McKinley Memorial at the State Capitol, at Columbus, Ohio, are being beautified by a liberal planting of trees and shrubs. Messrs. C. Y. Heikes & Co., of Troy, Ohio, secured this contract.

James Taylor of Mt. Clemens, Mich., is moving his old residence nearer to the greenhouses to be used as an office to be connected with the greenhouse plant proper, with another greenhouse to be used for a general line of plants.

It is reported that the license or tax imposed by the Province of Quebec and by British Columbia on non-resident commercial travellers representing firms or corporations having no place of business in the dominions, has been repealed, except in the cases of representatives of liquor and cigar firms. Prince Edward Island, however, retains the fee of \$20.

Eight hundred cars of fruit, according to experienced orchardists, will be shipped out of Lewiston, Idaho, this season, a yield unprecedented in this section. Seven hundred cars of this amount will be peaches, while the remaining hundred cars will be divided among the famous Vineland cherries, apricots, apples and smaller fruits. Much of this fruit has already been sold in advance by the growers, and the only difficulty now confronting them since the chance of a hurtful frost is past, is the fact that pickers are scarce.

PERSONAL.

The many friends of James Murray, gardener on the Henry Clews estate, Newport, R. I., will learn with regret of his serious illness in the hospital.

Visitors in Boston: Harry A. Bunyard of Arthur T. Boddington, New York; U. G. Scollay, Brooklyn, N. Y.; Walter Mott representing Bobbink & Atkins, Rutherford, N. J.; E. J. Faneourt, representing Pennock-Meehan Co., Philadelphia, Pa.; C. B. Knickman, representing McHutchison & Co., New York; Wm. Tricker, Lyndonville, Vt.; Geo. C. Watson, Philadelphia, Pa.; H. S. CUT FLOWER MARKET REPORTS

The general situation in **BOSTON** the flower market remains practically unchanged since last week. If anything, the supply is heavier, but there is no increased activity and prices hold as last reported. Roses are of excellent quality; in fact, they have never averaged better, and this is true of the product of all the growers. Carnations are also of fine grade and are selling well. Lily of the valley is still too abundant and goes slowly; the same is true of longiflorums. Dutch bulb stock shows some improvement. Violets are waning in number and importance; the best flowers are from frame culture.

Cold weather prevailed **BUFFALO** the past week and the supply was cut short. Business being brisk, a fairly good cleaning up was had. Carnations and roses were well in demand also sweet peas, lily of the valley and other stock. Beauties were in good supply and sold well, the short grades being preferred. Richmond, Killarney, Bridesmaid, Brides, Carnot are in finest quality and there seems little trouble to sell them. Lilies sold better than previous week also daffodils and tulip. Smilax and other greens not too plentiful.

Business is steadier **COLUMBUS** and better than for some weeks. This always is the case when stock ceases to be a glut. The supply of flowers of all kinds has shortened up. Carnations are in short supply. Some superb Richmond roses were noted. Violets seem to have awakened from their long slumber, as regards quality and sales; and now at the very end of the season are selling fast. As regards other stock, there is little or no change; bulb stock is about over. The closing of Green Lawn Cemetery to Sunday funerals has created various opinions amongst the craft; the vital question of course being the effect of such a radical change upon the demand for funeral flowers.

Supply and demand sure-
DETROIT ly played hide and seek last week, one day plenty of everything next day almost nothing. Considering the total sent in and how everything was promptly cleaned up proves a good run of business by all retailers.

Stock of all kinds **INDIANAPOLIS** has shortened up very much, this being especially noticeable in the case of carnations, most of the growers being off crop. In roses the market is fairly well supplied with all varieties. Beauties of unusual quality are seen. Some fancy lily of the valley is noted which finds good sale. The assortment of smaller and more springlike flowers is large and varied and much in demand. Every one is looking forward to the largest spring plant trade on record. A glance at the different greenhouses finds an enormous supply of all kinds of bedding stuff for the market. Tomlinson Hall market is making a good display in all lines, with trade only fair.

Present conditions
NEW YORK favor the grower inasmuch as there is not much surplus of anything. Small roses are more plentiful than other stock but prices hold at a fair level. American Beauties are in lighter supply for the past week and have appreciated in price, except for the defective flowers, of which there are a considerable number. Carnations are selling at satisfactory prices and no surplus. There are few cattleyas in the market. Lilies, tulips, lily of the valley and sweet peas are moving easier than for some time past. Green stock is sufficiently plentiful to meet all demands at no advance in figures.

The healthier tone
PHILADELPHIA noted in the Philadelphia market last week continued the present week with perhaps a little added snap. This is especially true of carnations the supply of which was inadequate and prices stiffened up considerably. American Beauty roses were plentiful and very good but no material improvement in prices. Other roses remain normal as to quality and price, the only noticeable change being a large increase in the short-stemmed grades. Double violets are very good for the season, the cool April weather having favored them and the demand is excellent. Lily of the valley continues of fine quality. Sweet peas have shortened up some and are good sellers. Cattleya Mossiae is the latest arrival in the orchid line; very choice. Plenty of gardenias with demand only fair. Oceans of callas and Easter lilies; much more than the market will absorb. The Barr daffodils (Barri Conspicuous) from the south have been quite conspicuous both in store and street the past week. The red-rimmed cup of this variety is very taking.

Trade with practi-
TWIN CITIES cally all of the dealers has been very good. Stock has been plentiful; in fact, Saturday the market was practically glutted and roses in particular suffered to a large extent. About every florist in the city had a special sale, at which roses were offered at 50c. per dozen. The supply of carnations would not permit any reduction as they are apparently scarce at the present. Plants have not begun to move as yet on account of the cold weather but the coming week undoubtedly will bring a change. Inquiries for plants for Decoration Day from outside towns are coming in lively and from present indications the demand will be brisk.

The few bright
WASHINGTON days of last week proved of some little help to the grower, but we are again in the midst of a damp, cold spell. Carnations are exceedingly scarce and prices keep up in consequence. The violet season is virtually over, though there are still a few good ones shown, due to the continued cool weather. Roses are of good quality, but Richmond takes the lead of everything, even leaving American Beauty in the background. Bulbous stock is quite scarce, but spireas, apple blossoms and other outdoor sub-

jects are in time to fill the gap, and are of unusually good quality. The numerous affairs of the past week kept the retail trade busy. The fruit does not seem to have succumbed to the cold snap, but nothing definite can be said of it yet. Should the fruit be in proportion to the bloom, there will be a plenty and to spare.

NEWPORT NOTES.

Among those who visited Newport last week were J. K. M. L. Farquhar of Boston and Joseph Leikens, New York. Mr. Farquhar's visit was a short one, but Mr. Leikens prolonged his stay in town to make arrangements for the opening of his store before Memorial Day. He reports a very good season in New York up to the week before last. It seems strange now to have no florist on Bellevue Ave., and stranger still to miss the familiar window display of the Fadden store. It is understood that Mr. Hurn will enter the employment of Wadley & Smythe in the capacity of superintendent of landscape work.

Newport dahlia growers are nearly through propagating from green cuttings of which a great number have been rooted by them. The growers, of whom there are several who ventured into the commercial ranks this spring, have already done fairly well with promise of a better rating by the end of the season.

It looks now as if the season for bedding out would be unusually late in beginning this year which will cause a great rush towards last part of it to obtain and plant what will be needed. D. M.

BUSINESS CHANGES.

O. J. Sawyer has purchased the business of G. W. Foster, Allentown, Pa.

Alex. Dallas of Waterbury, Ct., has moved his florist store into the Buckingham Building.

Hennessey Bros. of Joplin, Mo., have disposed of their greenhouses to W. E. Poundstone.

John J. Kruchten will hereafter continue the business of Kruchten & Johnson, Chicago, Olaf Johnson having withdrawn from the concern.

J. W. Gilliam has bought a half interest in the fruit orchard of H. Beck at Woodbury, Texas, and a nursery and florist business will be added.

NEWS NOTES.

Robert McMillen has opened a flower store on Arch street, Greenwich, Conn.

Dale Bros. expect to open a new establishment in Calumet, Mich., at an early date.

Wm. Schumacher, formerly designer and decorator in Miss Carlson's Chicago store, is now in charge of her place at Morton Hill.

The G. H. Hoskins Co., which has been formed recently and is located at 37 N. 10th street, Reading, Pa., has been awarded the contract to plant the grounds connected with the city water department.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HILL WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Working foreman for a commercial place who must be a first class plantsman, capable of growing a general line of decorative plants of first quality, also bedding plants. State age, qualifications and wages expected. Foreman, care HORTICULTURE, 11 Hamilton Place, Boston, Mass.

WANTED—Expert help in our Greenhouses where nothing but Cut Flowers are grown for a high class trade. Also a good Chrysanthemum grower and pot man. State salary and experience in first letter. Florist, 1035 Prospect Avenue, Cleveland, Ohio.

WANTED—Working foreman who understands carnations, mums, and general bedding plants. Must be honest and sober. Address R. L. Gonsalves, Waltham, Mass.

Young unmarried man for second man's position on small estate. Salary \$40. Apply in person at once to Olmsted Brothers, Brookline, Mass.

HILL WANTED

WANTED AT ONCE—A sober and energetic young man with knowledge of pruning, planting, etc., to assist in general landscape work. Apply in person or by mail with reference to A. Van Leenwen, Jr., 3 Westford Rd., Worcester, Mass.

WANTED—Single man as assistant rose grower on commercial place. Steady position to good man. Give reference from last place and state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B. care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

SITUATION WANTED—Either commercial or private. Sober, industrious, good experience and willing to work. Married, two children. Good references. Address R. R., care HORTICULTURE.

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

HORTICULTURAL SITUATION WANTED—Long experience in orchids, palms and exotic plants; been 5 years in tropical country, understand gardening in general. Now at a well-known flower nursery of N. Y. State. Will give best of references in every detail. Private place preferred. Address D. A., Box 303, Ossining, N. Y.

SITUATION WANTED—As superintendent or manager of gentleman's large private estate; 20 years' practical experience in all branches; first-class landscape engineer and capable of designing and developing the outdoor features of any estate, large or small; first-class grower of fruit, vegetables, fancy cut flowers and ornamental plants; can manage stock and farm crops to good advantage; can save you money in buying; familiar with the development of new estates; total abstainer; no family; interviews can be arranged; all references. Address Landscape Engineer, care HORTICULTURE.

SITUATION WANTED—As foreman or manager of some good all-round place by young man with 20 years' all-round experience. Good grower of cut flowers, general stock and nursery stock. Good landscape engineer. Total abstainer. Good references; good wages expected. Place preferred which can be bought later. Address Horticulturist, care HORTICULTURE.

WANTED—Situation as Head Gardener on private place; capable of taking care of orchids, ferns, palms, roses, etc. Best of references. Address N., care of HORTICULTURE.

We can with pleasure recommend the services of a skilled gardener and orchid grower to any lady or gentleman requiring the services of such a man. Apply Carrillo & Baldwin, Secaucus, N. J.

HOW TO PAINT

Buggies, farm wagons, farming tools, barns, outbuildings and houses often need painting. "Everybody's Paint Book," written by a thoroughly practical painter, will be found a complete guide to the art of outdoor and indoor painting. It is designed for the special use of those who wish to do their own painting. It gives practical lessons in plain painting, varnishing, polishing, staining, paper hanging, kalsomining, etc.

It also tells how to renovate furniture and gives many hints on artistic work for decorating a home. Precise directions are given for mixing paints for all purposes.

If farming tools and farm vehicles are kept painted, they will last twice as long, and anybody can do the work with the aid of this book. It is handsomely and substantially bound in cloth. A copy will be sent postage prepaid on receipt of price, **\$1.00**

Address

HORTICULTURE,

11 Hamilton Place, Boston, Mass.

SCALECIDE FOR ROSES.

Our correspondent's advice to use Scalecide on rose bushes should not be construed as recommending the use of that insecticide during summer indiscriminately. Scalecide should be used with extreme caution on rose bushes except in the dormant season, and although it is non-caustic and non-irritating even to the eyes, it will scald the rose leaf during hot weather if applied in the mornings or during the heat of the day. It has been used in the late afternoon without any injury whatever. For the green aphids on rose bushes, it may be used at a strength of 1 to 50 of water.

SOME SNAP SHOTS ON BOILERS

We have something to show you about boilers—something so reasonable, so chuck full of common sense that you can't afford not to give it consideration. What we have to say and show is printed up in this small catalog, and arranged so the hurry man can get at the meat instantly. Drop us a postal and along will come the "Snap Shots."

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

IF TWO MEN

can set up a "Burnham" Boiler at our factory and test it before shipping it to you—then two men can set it up in your boiler cellar. When it IS set up you can depend on its being ready for business AT ONCE—and that's where the value of our shipping test comes in—a test given by no other firm selling boilers to the greenhouse trade. In the first place you get a boiler that's made especially for greenhouse work. All after that is summed up in ease of running and an unmatched fuel economy. Two things that every wide-awake, long-headed florist must have. Write for Burnham Facts.

BOSTON Branch: 819 Tremont Building

PHILADELPHIA Branch: 1235 Filbert St.

YOU know an angle eave, unless heavily braced or made with heavy shade-casting plate of wood or iron, is one of the weakest points in greenhouse construction—the U-Bar with it's curved eaves not only makes a house of unequalled rigidity,

but casts practically no shade—the U-Bar is the only successful curved eave construction. It's shown in the catalog. **Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Bldg., 4th Ave. and 23rd St., New York.**

Bryophyllum calycinum (Salisb.)

botanical press without previous immersion in hot water. It receives its generic name from two Greek words meaning branch and leaf, from this habit.

Bryophyllum is a perennial, evergreen, succulent, frutescent, stove-house plant, which belongs to the natural order Crassulaceae and is native of Mexico, although now widely distributed in the tropics. It was first introduced into England from Calcutta by Dr. Roxburgh, who in turn procured it from the Moluccas. It grows in the Philippines and is the *Bryophyllum germinans* of the second edition of Blanco's flora.

It has also escaped in southern Florida, where it flourishes luxuriantly when once established. The flowers are pendulous, arranged on open, paniced cymes, rather large, of yellowish green color tinged with purple; the calyx is bladdery and of oblong form from which the tubular corolla projects as can be seen in the illustration. It is successfully grown when given good drainage, rich soil and moderate heat.

Carl Blomberg

• Plant Plenty of Annuals

I understand fully that every reader of HORTICULTURE is so well versed regarding the cultivation of our annual flowers that comment along this line is entirely unnecessary, but as I am and always have been such an admirer of this class of flowers, I cannot but feel that you will forgive me for urging their very liberal planting in your gardens, as the outdoor season for sowing the seed approaches. There are no flowers more useful all through the summer and early autumn than annuals; you need them in unlimited quantities for the vases and other decorations that are daily made, especially for the luncheon and dinner table. Again for exhibition purposes at the fall flower shows what is there better? It is very easy to have them by giving the matter a little forethought now.

Whenever I think of annuals my mind always reverts to those popular favorites that it seems to me should be grown whenever circumstances will permit in large quantities; those elegant varieties whose cut blooms can not only be used in decorative work, but also serve in the first place for exhibition purposes. I refer to such valuable subjects as asters, balsams, calendulas, coreopsis, cosmos, marigolds, mignonette, nasturtiums, poppies, Phlox Drummondii, salpiglossis, scabiosa, stocks, verbenas and zinnias. Space forbids a more lengthy list. Most of these sorts are fine for cutting, in fact can be used with very satisfactory results all through the season. I have not forgotten sweet peas, but as they are planted outdoors so much earlier than the other annuals, and moreover have by tacit consent been placed in a class by themselves, I will say no more about them at this time. Having directed your attention to some of

A relic of bygone years, when greenhouses on private places were more occupied with collections of decorative and flowering plants and curiosities from the vegetable world, than in our day. Now the mercantile products of cut flowers have increased and thrown out the old-fashioned but always interesting plants, which gladdened not only the amateur grower and lover of the children of Flora, but also gave joy to the old gardener. Very seldom nowadays we see these old-timers, and I, therefore, thought it would give pleasure to some of the younger people in the craft to be acquainted with one of them. It is a plant cultivated more for curiosity's sake than anything else. The student of botany finds here something that he very seldom will discover in any other plant, namely, its mode of propagation, because every notch of its leaf when taken from the plant and placed in a moist and warm location will produce a new plant. Indeed, new plants will form on specimens placed in the

our most esteemed annuals I will leave you to extend the list to any length you please, according to the purposes you wish the flowers for and your garden space allows.

How seldom do we stop to think what a wonderful variety of annual flowers there are that never find a place in our gardens. The list is a very long one. A close perusal of some of our seedmen's catalogues, who give special attention to flower seeds, will assist materially in making selections. How often it happens after we have decided to make a display of annuals at some horticultural exhibition that we are obliged to do considerable hunting around our gardens to make up a passable show, and even then are quite often forced to put in some pansies or other subject that will cause the committee on prizes to debar our exhibit from competition on the ground that the flowers are not all annuals. The best displays of annual flowers I have ever seen have been at the exhibitions of the Massachusetts Horticultural Society at Boston, and in the prize schedule of this society for the coming season I notice that the date set for such displays is August 3d, and that three prizes are offered. The wording of the schedule is as follows: "Annual—General display, named, not less than twenty-five varieties, filling not less than one hundred bottles." Now in order to properly compete for such a prize it is self-evident that preparations must be made at planting time, otherwise with most of us our best display made up from what we would naturally have would fall far short of making even a creditable appearance in such a competition.

I have referred at length to this matter of exhibiting annuals, as I earnestly feel that it has never been given the attention it deserves. There is no extra expense attached to growing a fine collection of annuals for exhibition, as, apart from this purpose the flowers are needed at this season, especially for the luncheon and dinner table. It is almost impossible to have too many of them.

M. B. Fayson

The Outlook for Small Fruits

At present, in spite of the cold winter and late spring, the outlook for the small fruit crop is most promising. This is chiefly due to the deep snow of the past winter, which covered the ground so effectually during the severest weather, that in many places hardly two inches of frost could be found. In many instances where raspberry and blackberry canes were not laid down, they were entirely covered by snow which drifted over them, and now appear green and healthy; indeed in

better condition than those laid down. If we could be sure of such a winter each year there would be no need to take the trouble necessary to perform the operation of laying the canes down. Currants and gooseberries were also snowed under and appear in the best condition, but these fruits are seldom hurt by severe weather even if left unprotected; however the blanket of snow is appreciated by even these hardy bushes.

No fruit is more influenced by the weather than the strawberry for, while it always has to be protected with straw or litter of some sort, the difference between a snow and snowless winter is very apparent. This season the strawberry leaves under the mulch are as green and fresh as they were when covered in the fall, while the roots are in the very best condition. During an open winter even with the best of cover, strawberries will lose most of their foliage and appear brown and dead in the spring, while the roots, which have been trying to maintain themselves in ground that is constantly freezing and thawing are more or less laid bare and their vitality lessened. Another great advantage of a late spring for the strawberry crop is that it retards the blooming season at least one week and many of the early varieties are thus saved from a frost. Marshall is a variety which is most certain to start when the weather is warm in April and of course the blossoms are frozen. This climate is not adapted to successfully growing the extra early varieties. If things come on normally now the crop of strawberries ought to be large and of good quality, although a frost during the blooming season may upset all our best plans. Strawberry beds uncovered about the 25th of April should have a good dressing of wood ashes and bone meal to get a strong growth of foliage and stem. It is also an excellent plan to mulch currant and gooseberry bushes at this time with manure (well rotted) covering the manure with soil to keep it from drying up.

While plums can hardly be classed among small fruits, yet a word about them in passing will perhaps not be amiss. The promise for this crop is very fine, but here again a frost about May 15-18 would ruin our hopes. The fruit grower is ever menaced by change of climate, but one success very often pays for two failures. Plum trees should be well cultivated for about a month and then mulched with some litter or straw. Don't forget to spray the trees well, and for this use a weak solution of Bordeaux mixture not more than 2 1-2 lbs. of copper sulphate to 50 gallons of water and four lbs. of lime; in fact spray all your fruit, strawberries included. Put in some arsenate of lead for the currants and gooseberries and you will only have to spray once.

Horticulture's trump cards: Originality, forcefulness, superior reading matter, no muzzle, friends everywhere.

British Fruit Growers' Foes

It is generally recognized that the fruit-growing industry in Britain does not receive the same amount of fostering aid as is the case in most of the Colonies. Take Canada, for instance. The Dominion growers, who have just finished another successful export season, have greater advantages from their Government in the pursuit of their business than is the case in Britain. Government inspectors visit the principal orchard districts to give demonstrations in pruning, spraying, and other necessary operations conducive to good culture. The Government has also established a standard for securing uniform grading and efficient packing. Inspectors are appointed to see to the carrying out of the provisions of the Fruit Marks Act, which requires the apples to be packed in barrels to correspond with the marks outside. As a rule, buyers on this side can rely upon the grade marks correctly representing the actual quality of the fruit. The Dominion authorities also enforce regulations for the suppression of orchard pests and diseases.

For some years there has been an agitation in Britain to secure a greater protection to the orchards against the spread of infection. At the present time the orchardist who keeps his holding clean and healthy too often has his labors nullified by a careless neighbor, whose neglect may ruin the crops of a whole district. The need of some change in our present haphazard methods has been emphasized by the investigations of Professor Salmon, of Wye College, as to the American gooseberry mildew. In various European countries, notably in Sweden, it has been found necessary to take steps to prevent the importation of infected stock. Several of the British fruit-growing associations have passed resolutions in favor of a similar precaution being taken in this country.

A bill dealing with this question of disease prevention was introduced three years ago by Sir James Rankin, one of the Herefordshire members. This provided for the compulsory inspection of infected areas, the destruction of infected fruit and trees and bushes, with compensation for the owners. It also proposed the establishment of a special branch of the Board of Agriculture to deal with questions affecting the fruit-growers. The measure was eventually withdrawn, pending the deliberations of the Departmental Committee appointed by Lord Onslow to inquire into the position of the British fruit growing industry. After holding a large number of sittings, examining witnesses on all phases of fruit growing and distribution, several pages of recommendations were made by this committee in the report which was issued about two years ago. None of these proposals were put into practical shape.

There is now a possibility of growers receiving an instalment of the reforms for which they have been agitating through their organizations for some years. Lord Carrington has brought forward a bill which gives the Board of Agriculture power to act in case of need in the suppression of fruit pests in the same manner which proved so effective in dealing with the Colorado beetle some years ago. This is a step in the direction advocated by many leading fruit experts, and it will doubtless lead to the adoption of further preventive measures. Growers argue that there is a precedent for

the adoption of some protective measures to secure healthy orchards, seeing that the Government enforces stringent regulations to prevent disease spreading amongst the flocks and herds on the farms. Compensation is paid to the farmer who for protective purposes is required to slaughter his sheep or cows, and it is argued that the same system should obtain with regard to the disease infected trees and bushes which have to be sacrificed to secure healthy orchards. An object lesson of the success attending the Government encouragement of fruit-growing is afforded at Covent Garden market at the present time. Numerous cases of clean skinned, bright colored apples are being imported from the Antipodes; the total imports it is estimated will reach half a million cases. Everything possible is done in the Australian dominion to ensure the placing of the fruit on the market under the best conditions. It is satisfactory to find that at last something is being done to assist our home-grower to attain a greater efficiency in catering for the increasing demands for high-class fruit.

W. H. Adsett.

Spring Care of Small Lawns, Etc.

Of late years great interest has been taken in the movement to give school children a rudimentary education in horticulture, but the most sanguine supporter of the measure cannot expect immediate results, but that great success will be achieved goes without saying. It is certainly a great move in the right direction, and deserves all the help anyone either connected with horticulture or otherwise can give.

The residential districts of great cities furnish, each spring, abundant proof of the necessity of instilling some practical knowledge into the minds of the majority of owners, and I am sorry to say not a few of the so called "landscapers."

All at Dayton last August could see for themselves what grand results all over the city had followed the action of the great manufacturing institution of Dayton in instilling into their army of workpeople a love of the beautiful and, not content with this, following it up with illustrated lectures, and practical information. The achievements at Dayton have been frequently lauded in the horticultural press and we have wondered why steps have not been taken ere this by our horticultural societies to bring about corresponding results in their own neighborhoods.

The pruning by enthusiastic but otherwise unfit operators frequently presents the most glaring eyesores. How often do we see fine young fruit trees mutilated by persons who do not know the difference between a wood and a fruit bud and, when it comes to shrubbery, the damage is such as to take more than one season to repair. We venture the remark that a great deal of misinformation on this and kindred subjects has been scattered broad-cast by so-called agricultural papers, etc. We do not wish to be misunderstood in this statement but feel sure the majority of the readers of these notes will understand the class of literature alluded to.

We ended the April, 1907, with no regrets.

Fickle Whatever can be said to its credit in other
 April parts of the country it has certainly been, in
 the northeastern section, the most unseason-
 able. And on many a day and we need no assurance

from "the oldest inhabitant" as to this fact. The effect of the repeated cold spells in April on garden trees and shrubs already weakened by a most protracted and severe winter cannot yet be calculated but it cannot be other than harmful. Nursery dealers have some cause for satisfaction in the unexpectedly long selling season they have enjoyed as a result of spring's procrastination and the season's slow advancement has been also a great boon to the moth hunters. In all other lines of horticultural activity, however, April, 1907, stands as a disappointment in many respects.

A business
with a great
future

The passion for beautifying the home and public grounds with trees and shrubs and flowering plants is, as yet, only in its incipience in this country.

The present generation is not far enough removed from the destructive epoch—when the seemingly boundless forests were an incumbrance, when our native flowers were despised because of their abundance, and when the "clearing" and not the planting was the recognized mark of civilization's progress. But the awakening now under way has a hearty earnestness about it that cannot be misunderstood and no exceptional comprehension is required to see that what is being done today is next to nothing as compared with what the near future will demand. It is safe to predict that the next twenty years will show a development and expansion of the ornamental planting industry in this country such as the world has never seen and far beyond our most sanguine imagination. For the young man aspiring to a lucrative horticultural career the opening in this particular line is the best in sight today.

An anchor
to windward

The Rhinebeck correspondent of a Poughkeepsie paper says, "A large number of new violet houses have been started in town. Will it ever end?"

Rhinebeck certainly has shown unwavering confidence in the future as each year went by, regardless of falling markets and, notwithstanding the pessimists who long ago declared that the violet business was overdone, the passion to build violet houses seems inextinguishable in the breast of every true Rhinebecker. Nobody who has communed with the native of that marvellous country is ever likely to charge him with a proclivity for foolishness so we are ready to accept it as settled that the Rhinebecker knows what he is about and that the end of his building operations will come when the violet business ceases to be profitable and not until then. Still it might be advisable for him to bear in mind that quotation from Don Quixote, "It is the part of a wise man to keep himself today for tomorrow, and not to venture all his eggs in one basket," and in erecting his new greenhouses to build and equip them in such manner that in case of disaster to violet crop or violet market attention may be conveniently turned to other lines which promise better for the time being, at least. Many establishments in the violet section are not so constructed.

WHOLESOME CHESTNUTS.

Hollyhocks should now be planted out in their permanent flowering quarters and, while at it, may as well be staked now as later. Leave at least three feet between the rows and room for the plant in the rows to develop individually perfect.

All perennials intended for out door planting should be set out without delay if the work is not already done. Except for planting in mixed borders it is more convenient as well as conducive to more pleasing results in general effect when the plants are in bloom, to plant the different kinds by themselves. A little thought now when planting will enable the planter to make a presentable appearance with this class of plants all through the season without the eye sores sometimes noticeable on account of injudicious planting. A front row all of one kind may be so selected as to take the place to all appearance formerly occupied by the back row of another kind.

There are very few places where there are no spots or objects that would not be materially improved by the planting of trailing or creeping vines or roses. Roses are especially cheerful when in bloom on wood growing unhindered on old fences, up against boulders, the sides of ugly buildings and many other equally objectionable features which when covered as suggested are a delight to the eye.

The appearance of the paths and roads on private estates as well as those of parks and other public places have a great deal to do, one way or the other, with the impression made as to their well kept condition. It is not only desirable that roads and paths should be so constructed as to make walking easy and pleasant, but a freedom from weeds and a neat appearance of the edges only slightly elevated above the surface will add greatly to a reputation for tidiness, and give cause for appreciation out of proportion to the trouble involved.

There are few things more annoying and objectionable than dead and crumbling branches on trees; these should be removed without fail before summer, likewise dead trees unless as stumps they are intended to be made ornamental by the planting of vines. A dead tree is much more unpleasantly noticeable than the absence of a tree.

Now is the time when many plant privet for hedges. When an extra strong hedge almost fence-like in obstructiveness is desirable the plants should be set in a double row in a trench dug the proper depth for the root of the plant. The plants in one row should fill the vacant spaces between those of the other row. The roots of privet are great feeders and for that reason the soil should be rich or made so by the addition of manure when planting. After the plants are all in they will in all probability have a somewhat irregular appearance; this can be remedied, and that with beneficial results in the matter of more robust growth from the base, if all the plants are clipped back.

When both deciduous and evergreen trees or shrubs are on the docket for planting it will be much better to give first attention to those that are deciduous, leaving the others until the last. When planting in places

where the wind blows with terrific force and monotonous frequency it is unreasonable to suppose that one frail tree will be able to stand nobly up against it alone. Thus it would seem folly to plant young isolate specimens in such places. Better, by far, plant a goodly number comfortably in groups and if deciduous trees are desirable a guard composed of white spruce or some other equally hard evergreen will protect them until they gradually get hardened to climatic conditions. Wind breaks such as suggested need not of necessity have the appearance of being there for any other purpose than that of their own ornamental usefulness, if planted in proper arrangement.

SHRUB CHAT.

Privet rooted from last year's wood makes the strongest plants, but that is by no means the only method of propagation. Through the summer good cuttings in abundance may be rooted easily when set in any kind of soil, but leafmould preferably, in a shady situation. The cuttings will root in about three weeks, when they should be lifted and planted out in nursery rows.

Acuba Japonica will not live out doors through a northern winter, but it will hold its foliage when kept under cover in a cold shed or store house.

Andromeda polifolia is a handsome little shrub, hardy as can be, with little nodding clusters of pink or white flowers in spring.

The tree box stands out doors perfectly well all winter and considering their usefulness as decorative specimens, their increase in popular favor is not surprising.

Ligustrina Pekinensis pendula is the Chinese weeping lilac. It has large heads of white flowers.

Among the shrubs suitable for shady places may be noted the following: Berberis in variety, Clethra alnifolia, dentzia, privet, hypericum, kalmia, Pyrus Japonica, rhododendrons, rubus, laurus, sassafras, mahonia, Spirea Bumalda, itea, cornus in variety.

THE GRAPE HYACINTH.

Editor HORTICULTURE.

I was much interested in the article on the grape hyacinth by Mr. Cameron. We see too little of this gem. I remember when some fifteen years ago with a friend from the Experiment station, New Brunswick, N. J., I came across a patch of about one-half acre, on the old "Evans" place just south of the city limits. This is an old manor residence and had been held by the same family over two hundred years. We asked the superintendent to tell us about it. He said he had been there thirty years and that patch was there when he came, only not so large. It was the common blue Muscari bothryoides. We could find no record of when it was planted. It had complete possession of the place and was a sight never to be forgotten. It received no care, only neglect, the proprietors being very old, were hardly aware of its existence. It shows that it is perfectly hardy here and that under favorable circumstances, it will increase and take full possession, being there almost like grass in other places. EDW. REAGAN,

Morristown, N. J.

NOTES ON NEW ENGLISH CARNATIONS.

Editor HORTICULTURE:

I noticed in a recent issue of HORTICULTURE a description of several of my new seedling carnations. There is, however, an error, probably clerical, in what your correspondent says regarding the size of "Mrs. H. Burnett," which he describes as being from 2 inches to 2 1-2 inches across. The average size of the blooms exhibited at the show of the Winter-Flowering Carnation Society was 3 1-4 to 3 1-2 inches; it is only inferior in size to Enchantress and quite eclipses it in color. It beat Enchantress in the class for 36 blooms, light pink, both at the show held on December 4 and also March 13, and was certainly admired more than any other carnation there.

As to its keeping qualities I may mention it is infinitely superior to Enchantress in that respect. Mr. A. Smith, who raised Britannia, begged a bloom of it on March 13th, which was cut on March 10th, travelled 200 miles on March 12 and had stayed in a hot conservatory all day on the 13th. He wrote me on April 1: "The bloom of Mrs. H. Burnett you gave me lasted till yesterday (March 31) which speaks well for its lasting qualities!" I think it does. Three weeks after being cut is pretty good, isn't it? You in America should be able to do this variety splendidly during the winter, where you have so much more sun than we do.

Marmion is not a Malmaison, as stated by your correspondent, but a seedling from Prosperity, the other plant being Mrs. Lawson, though it has the Malmaison habit rather; it is, however, a perpetual flowering carnation of the largest size—four inches across, with as strong a clove fragrance as a Malmaison. I should imagine it rather resembles Toreador, which I believe was raised from the same cross. It is a strictly fancy carnation, and would, I think, quite out-class Prosperity in your country, except perhaps as regards freedom—it being a slow grower.

I should call Mikado more of a heliotrope than a "dull slaty purple." It is either liked very much indeed, or not admired at all. It is a good doer, very free, and averages over three inches and has a strong clove fragrance.

Yours faithfully,

H. BURNETT.

Guernsey, England.

MADISON (N. J.) NOTES.

Arthur Herrington, superintendent of Florham Park, contemplates running two or three houses of roses this season in the "Afton Greenhouses." Richmond, Queen Beatrice and American Beauty will probably be his choices. The rose growers of Madison, are now cutting in quantity fine long-stemmed roses, but prices are not flattering, and the fact that last winter was the poorest in their history, on account of the unfavorable weather, tends to keep their cash account below what was looked for. Many are going to devote some of their space to carnations this year.

News of the Clubs and Societies

NORTH SHORE (MASS.) HORTICULTURAL SOCIETY.

At the regular meeting of this society April 19th, R. A. Mitchell gave an interesting address on pruning fruit and shade trees, showing the advantage of experience and good judgment in that line of work over the man who sets out with a pair of shears or knife and a determination to cut something because it is the season for such work. Mr. James Salter was awarded a certificate of merit for vase of antirrhinum.

On April 26th, under the auspices of this society, J. K. M. L. Farquhar gave a public stereopticon lecture in the Town Hall, Manchester, on "Gardens of Italy." Pictures were shown and descriptions given of the restored gardens of Pompeii, the marble and bronze sculpture and statuary being but very little damaged owing to the extreme lightness of the lava or ashes under which they have been buried for over 1800 years. This style of garden is the courtyard garden, and is the oldest form of Italian garden, similar in construction to the high-walled gardens of China and Japan, architectural rather than horticultural. Gardens of Florence, Rome, Naples, Milan and Genoa were also visited. In nearly all the old gardens the same idea prevailed—marble, running water and foliage, with here and there a few flowers. A later style of garden is that of the Renaissance period, where the informal gives place to the formal and all flower beds and walks are of geometrical design. Mr. Farquhar did not recommend the Italian garden as suitable for the rigorous winter climate of New England, preferring the English terrace garden where formal treatment is inevitable. In the garden of the Czar of Russia was shown what can be accomplished by the use of bay trees, box and other trees grown in tubs and under which condition they can be moved and given necessary winter protection.

WILLIAM TILL.

THE HORTICULTURAL SOCIETY OF NEW YORK.

Dates have been fixed for the International Conference on Plant Hardiness and Acclimatization, which is being organized by the Horticultural Society of New York. The conference will extend over three days. The opening session on Sept. 30th will be held in the rooms of the American Institute; the second day will be devoted to an excursion to some point of interest in the neighborhood, and the final day's session of the conference on October 2nd, will be held in the Museum Building of the New York Botanical Garden.

The preliminary program is being put into shape and will shortly be issued. A list of about two dozen titles has already been prepared and a very interesting conference is assured. The Secretary is still open to receive suggestions and promises of communications from horticulturists, and communications should be addressed to the office of the society, Room 60, 55 Liberty street, N. Y. City.

LEONARD BARRON, Secretary.

ELBERON HORTICULTURAL SOCIETY.

The Elberon Horticultural Society held its regular meeting on April 22nd, with President W. D. Robertson in the chair.

Peter Murray, superintendent for S. R. Guggenheim, read an instructive paper on hardy shrubs. Mr. Murray dealt with his subject in a creditable manner. An interesting discussion followed.

The principal exhibits at this meeting were collection of early-flowering shrubs shown by A. Greib, early vegetables by F. Detlinger, Bride roses by A. Bauer, carnations by J. Kennedy, and a plant of *Cattleya Skinneri* by P. Murray. Cultural certificates were awarded to Walter Swain for a specimen hydrangea and P. Murray for American Beauty roses.

GEORGE MASSON.

COLUMBUS FLORISTS' CLUB.

At the final meeting for April vice-president R. A. Currie was in the chair, and a large gathering of members were present. It was voted to hold a rose and strawberry show, Tuesday, June 11th, and M. B. Faxon, I. D. Siebert and A. Wedemeyer were made a committee to arrange details. Plans were started for our annual field day, in fact the committee in charge hope to fill two special cars to Buckeye Lake this year, so very popular has this event become. The seed committee are still at work making the annual distribution to the school children. In this connection I will say that the Board of Education has purchased a set of garden tools for each school building. The display of plants and flowers was a very creditable one, and the floral committee awarded to I. D. Siebert for a fine vase of white and yellow snapdragons 18 points. What will probably prove to be the last tulips of the season, gained 17 points for R. A. Currie. The varieties shown were King of the Yellows and Kaiser Kroons. At a late hour an adjournment was taken to Tuesday evening, May 14th.

AMERICAN CARNATION SOCIETY.

Carnation registered, by Stanley B. Fillow, Westport, Conn. "Juanita." A bright scarlet of the largest size and a very strong stem. A very free bloomer and an easy rooter.

ALBERT M. HERR,

Lancaster, Pa.

CLUB AND SOCIETY NOTES.

The preliminary schedule of prizes to be awarded at the 9th annual exhibition of the Tarrytown (N. Y.) Horticultural Society, Nov. 6, 7 and 8, 1907, has been issued. Send to Secretary E. W. Neubrand, Tarrytown, N. Y., for a copy.

The Annual May Exhibition of the Massachusetts Horticultural Society will be held at Horticultural Hall, Boston, on Saturday, May 4, from twelve to four o'clock. The schedule calls for displays of calceolarias, pelargoniums, tulips and other spring-flowering plants, and vegetables. Admission is free.

WM. P. RICH, Secretary.

WASHINGTON STATE FRUIT NOTES.

The United States Department of Agriculture has sent a new variety of oranges to Kennewick, southwest of Spokane, for experiment purposes. C. W. Storey and James Crowell have been selected by the department to conduct the experiments. The trees are cold-resisting citranges recently developed by the department, and it is believed by experienced orchardists that they will thrive in the Kennewick country which has a mild winter climate and early spring. Growers all over the State are watching the outcome with interest and if the tests are successful more trees will be planted next year. The district is considered a favored one for grape culture, some of the growers cutting crops of Black Hamburgs, Flame Tokays, Muscats and Sweetwater valued at from \$500 to \$600 an acre. Most of the growers combine peaches with the grapes; thus an acre yields from \$9 to \$10 in both fruits.

'Apple growers in the Wenatchee valley, west of Spokane, have adopted a plan which probably could be followed with profit by orchardists all over the United States. It is to raise apples for the Australian market, where the top prices in the world are paid for red fruit.

Edward Wagner, who recently disposed of a shipment of 3,100 40 pound boxes of central Washington apples in the land of the Kangaroo, where he discovered the market, declares the following varieties are good shippers and command high prices on the Australian market: Spitzenburg, Winesap, Rome Beauties and Missouri Pippins. The Jonathan apple is not wanted, he declared recently on his return from Sydney, adding: "The people want red apples and they are ready and willing to pay top prices. I did not have the least trouble in selling the red varieties, but they would not take the white ones as gifts. That is a 'tip' to growers all over the United States."

Official announcement is made by Robert H. Cosgrove, secretary and manager of the Spokane Interstate Fair association, and L. G. Monroe, secretary of the Spokane Chamber of Commerce, of a special prize of \$500 for apples at the fruit exposition next September, and there will also be prizes for peaches and plum exhibits, the fruit department prizes alone aggregating \$5,000. Prizes will also be offered for the best special display of apples and green fruits, while a prize of \$1,500 will be awarded for the best agricultural exhibit, containing a display of all varieties of farm and orchard products. The total prizes will amount to more than \$40,000 this year, and a lot of good natured rivalry is certain to follow.

OBITUARY.

Mrs. Gordon, wife of George Gordon, gardener for Dudley Pickman, Beverly, Mass., died on Friday, the 26th ult. Mrs. Gordon was greatly respected in the community and her funeral was largely attended by sorrowing friends.

PROSPECTS FOR FRUIT CROP.

The following reports from the horticultural inspectors have been received by Secretary M. A. Shute of the Colorado State Board of Horticulture in reply to letters sent out April 5th.

Boulder County—From L. H. Stanton, Boulder:

"The orchards in Boulder county are generally in good condition having been better cared for during the past season than heretofore. The fruit buds have not been injured to any great extent and the prospect for a fruit crop this year is good. The greatest danger is from late freezing, as the buds are a month earlier than usual."

Garfield County—From J. F. Myser, Rifle:

"All fruit buds in Garfield County up to the present time are in perfect condition, with a favorable outlook for the future. The danger period for pears however, has not arrived yet as they are not in bloom. The frost may catch them later when in bloom or about that time and we all know the result."

Pueblo County—From J. N. Bartels, Pueblo:

"Our fruit in this county is somewhat injured from the late cold weather the latter part of March. We are still hopeful that it is not as badly damaged as reports would indicate. One man said to-day 40 per cent. of his peaches were left. Ben Davis apples are nearly all killed. The Yellow Transparent are all safe, as are some other varieties. We are still hopeful. The prospects were never better for a heavy crop until the freeze came, and people were becoming enthusiastic over fruit growing in Pueblo County. The largest acreage of trees will be planted this year in Pueblo County than has ever been planted, perhaps double that of any former years. Most of the trees that have been shipped in are of a superior quality. People are dealing directly with reputable nurseries which is better for both parties."

Montrose County—From Edward Silva, Montrose:

"The fruit crop in this section is so far O. K. The apricots and Japanese plums are badly injured, but the peaches and apples are not hurt at all. The outlook is fine for a large crop of peaches and apples if nothing happens."

Larimer County—From F. Y. Moseley, Loveland:

"The peach and peach-plum have been frosted a little but there are only a few of these in Larimer County and everything else is in fine shape. The prospect for a full crop of fruit is good except that the extreme earliness of the season and consequent extraordinary advancement of fruit buds places most all fruit in great danger for almost a month to come."

Montezuma County—From P. S. Taylor, Dolores:

"No injury to fruit buds. Prospect for the largest fruit crop ever had in Montezuma County. The people are setting out an unusual number of fruit trees."

Denver County—From C. F. Thompson, Denver:

"I find upon investigation that frost in this County up to date has done no damage. The outlook for a good crop of the small fruits is good."

Fremont County—From Thurston White, Canon City:

"I think the fruit prospects are good yet. Doubtless many of the earlier blooms of peaches, plums and apples are killed. I think however there is plenty left for a full crop. Trees are coming in very rapidly for spring planting."

Morgan County—From A. W. Harcourt, Ft. Morgan:

"Early blooming plums are about half killed by frosts, otherwise the prospects is good for all kinds of fruit."

Otero County—From J. J. Brown, Fowler:

"The cold snap that we had here just after Easter did a great deal of damage to the fruit buds, killing practically all of the peaches, about 75 per cent. of the early cherries and from ten to twenty per cent. of the later cherries. I notice that the damage done varies with the orchards, those having been irrigated just before

IRRIGATION OF GARDEN CROPS.

The necessity for irrigation is beginning to be felt in the truck gardens of western New York, and especially in the garden lands of Irondequoit where, on account of a good city market, it is advisable to force early vegetables and great interest has been manifested in the subject of irrigation.

The gardeners have become alarmed, in recent years, at the drought, especially at critical periods in the life of certain crops, and they are giving their attention to the means whereby the land can be moistened and the thought of drought have no fear for them.

The gardeners who have piped their land for irrigation and can throw a good spray, as shown in the picture, are well pleased with the results obtained. The subject illustrated is

celery. The picture shows how it is planted, the rows one and one-half feet apart, and the plants in the row four inches. The celery watered last year, grew well and did not rust. The sprayers are placed so that there is an equal distribution of the water, and the plan is economical. The gardener can, when the celery is ready for market, take up the pipes, and use them, if desired, for winter heating purposes.

The wells from which the water is obtained are usually 12x12 and 20 feet deep, and have so far given an abundant supply of water. The water is forced with a gasoline engine. Celery is not the only crop sprayed. It is done also with spinach, carrots, parsley, beets, musk-melons, and in fact all kinds of vegetables.

H. R. PEACHEY.

the frost came not being hurt as badly as those where the soil was dry. The last frost came on the night after the rain that we had on the morning of April 4th and did very little damage (except that it killed what few peaches that were left) on account of everything being wet. I have not made a very thorough inspection of the orchards yet, as I have been very busy looking after nursery stock, a great deal of which is being shipped into our county this year. The prospect for the apple crop is first class at the present time, there not being such an exhaustive amount of bloom buds, but plenty to give a full crop, and they are well distributed over the trees, thus distributing the drain of sap equally among the branches. The early plums were nearly all in bloom when the freeze came and of course all of the tender ones were killed. The late plums, such as the Lombard, Green Gage, German Prune, etc., are still all right."

Delta County—From H. A. Richardson, Delta:

"The fruit buds are injured some, but the trees were so heavily loaded it was more of a benefit than an injury. The prospects for fruit generally, excepting the apricots, is very promising, and if we have no late frost you will hear from Delta County the coming fall."

SPRING FRUIT PROTECTION.

Replying to an American inquiry, Consul-General A. W. Thackara, of Berlin, makes the following report relative to the German use of smudges in the protection of fruit trees, vines, etc., from frosts:

It is the opinion of all those from whom I have heard that the protection

of trees from damage which may be caused by late frosts, at least in Germany, is by no means in general use, and the method may still be considered in the experimental stage. For instance: In Werder, about 25 miles from Berlin, the center of a large fruit-growing industry, the president of the fruit growers' association writes me that the method is very little employed. In isolated cases the growers have used dried leaves, weeds, sawdust, or some other cheap material which will produce smoke, with more or less favorable results. In the vine district of the Rhine and among the fruit growers of Wurttemberg when a number of the neighboring owners unite together and make a concerted movement to use the smudge method a certain degree of success has been obtained, but the method is not in general use in Germany. It is not intended to give the impression that the question of the protection of fruit trees and vines from frost by means of smudges is not of interest to the agriculturists of this country—far from it. Many exhaustive experiments have been made by experts and others and are still being made, and while the results have not yet been as favorable as were wished for, a satisfactory solution, which would mean millions of dollars probably to those interested, is still hoped for.

A Plea for the Picturesque in Landscape Gardening

(A paper read before the Gardener's and Florists' Club of Boston by B. K. Howard.)

In this paper I speak of landscape gardening from my own point of view. I look at nature as far as I can as a picture maker and not in any way as an expert in horticulture. I shall try to point out some of the things that make a landscape beautiful and paintable and hope it may be of service to some of you in arranging things of beauty in nature itself. First, we are to consider the different styles of landscape gardening and the different results obtained therefrom. The first garden we hear of is the Garden of Eden and probably that would take first prize, even today. It had its defects however. It was lonely for the one poor man who first inhabited it, so the Lord made him a companion from one of his spare ribs while he slept. This would have been all right if he had removed the tree of knowledge, which grew in the centre

Flowers were bedded in every conceivable and horrible geometric pattern or rug or bed spread or baker's confectionery and these inartistic and daylight horrors still exist to the present day in Europe and America. We shall see plenty of it in the Public Garden when the season arrives. The Italian gardens are less ugly than most of the formal gardens. Many of them have beautiful white or stucco work buildings with red tile roofs, which give a fine setting for the cypress trees and the formal garden. Some of the Italian gardens are very beautiful, which is very often due to the fineness of the location. Near the mansion in a private estate, it is generally well to have the gardening more formal in order not to make the break too sudden in going from the formal architecture of the mansion to the freedom of the rest of the estate.

ished garden or park should contain that predominating expression. So much of the landscape gardening that we see is almost exactly alike; no individuality of expression. Instead of taking each individual park or estate and studying it to find out what it already has in the way of natural beauty and sympathetically developing it upon these lines, the whole business is thrown into a grand display of landscape architecture, by a lot of crack-a-jack draughtsmen, who show a mighty little sympathetic feeling for nature. By too much pruning and blasting and leveling, a once spirited landscape may become perfectly tame and insipid.

One should be familiar with nature in all her moods. Be observant and when you see a beautiful thing in nature seize upon it and try to reproduce it in a garden or park; only make it even more spirited and more expressive if possible. There is a beauty of nature and a beauty of art. Art emphasizes the beauty of nature. The secret of all beauty is character; there is no beauty without character and expression. Things which have character are distinct and distinguished, and make a lasting impression upon the beholder. Develop the leading character of an estate or park, and, if the area is sufficiently large, each separate scene may be given its separate character or expression, and the art will be to unite the whole into harmony.

Landscape gardening and painting are nearly allied. The thing is to know your materials and arrange and cast out and add just as a painter does in composing a great canvas. This landscape gardener must have patience, for trees and shrubberies and flowers will not grow in nature as rapidly as they do on canvas, so he must plan well and observe nature carefully, and before he cuts down and casts away he must be very sure that he is cutting down and casting away the right thing.

There are many expressions that might belong to either the beautiful or the picturesque; simplicity, dignity, grace, elegance, gaiety, etc. A few fine trees scattered over a smooth lawn will give a character of simple beauty. Lofty trees of great age, hills covered with rich forest, an elevation commanding a wide country, stamp a place with dignity. A number of bright blossoming shrubs and flowers express gaiety. If a person has small grounds to improve it is best not to attempt too much. A few fine trees and shrubs well placed and, if the house is of simple colonial architecture, quite a lot of roses and climbing plants can be used to great advantage.

The three most important qualities to be embodied in landscape architecture are: Unity, harmony and variety. Unity or the production of a whole or leading expression; a defect in unity might be illustrated by grounds having two or more characters of landscape, which were all right in themselves, but failed to unite in one expression, like effects that would be as incongruous as putting flowers and vegetables together on the lawn, or cast iron statuary among noble trees. There should be variety sufficient to give varied color

UNITY

of the garden. This goes to show that, even at that very early date, a little judicious thinning out would have been beneficial. This garden contained everything to delight the eye and produced food in abundance and there was no work required; no pottering and digging and planting and Adam didn't have to study geometry or perspective. Life in this garden was all the color of a rose, but the crash came and great was the fall thereof, and Adam and his spouse had to go forth and work for a living and make their own gardens and grub and sweat in sun and rain for the little they got in return. (For further information relating to the garden of Eden, read the Bible or "Extracts from Adam's Diary" by Mark Twain.)

Most of the old-style gardens were very formal, purely geometric in every way possible. Every tree and shrub that could be pruned or tortured into a fantastic shape was thus treated.

Downing divides landscapes into two large divisions, namely: the beautiful and the picturesque. The former is characterized by roundness and smoothness and by curving lines, the latter by roughness and irregularity and accidental effects. The beautiful is the artificial from his point of view and from my point of view the picturesque is the beautiful and natural. If a thing is not paintable, to me it is not beautiful. By studying good landscapes by the best masters, such as Davis, Corot, Rousseau, Claud Lorraine, Ranger, you will learn more about what is truly beautiful in landscape than in any other way, because these men are and were masters and know what is best to choose and that which will best combine into unity, harmony and variety. Every landscape has some particular expression and it should be seen and understood by the landscape gardener and his work should be along that line and the fin-

and at every turn new and interesting variation in light and shade and tree and shrub formations, all consistent with a harmonious whole. Among the greens there should be some purples or orange in small or large quantities, according to the strength of the color. Yellows should be tempered with reds or blues. This will give variety and at the same time recognize the law of harmony which presides over the whole to prevent discord. It must not preside too greatly, however, as it may lead to monotony and lose the main feature of expression. A place might be planted with only one kind of tree. That would give unity and harmony, but would leave out variety and produce tameness and monotony. Too much variety would give a mere hodge-podge of confusion.

Up to this time we have learned:

That we should give to a landscape expression derived from a close study

they blossom white or pink or red in colors tender and delicate. Then comes the early foliage so fresh and green, deepening as the summer advances. The ripened leaves flame in autumnal glory when nature is richest and best. Then the forest sows her carpet of red and golden leaves and the bare undraped trees sleep through their winter rest, and seen from a distance, the color of a leafless forest against a snow-clad hill is extremely fine to look upon.

In arranging and planting trees or in clearing away the unnecessary parts, great care and judgment is necessary not to get a stiff formal appearance. Don't have the trees equally distant so they can grow into a round ball, but let them be crowded in places, that they may thus develop character. In making an opening through the wood in order to expose a desired view be careful that it is made at a

should be in lines which will more or less lead up to it. Plants and shrubbery near the house can be of more individual interest, while broader and more general effects should prevail in parts more remote.

(To be continued.)

PUBLICATIONS RECEIVED.

Report of the Commissioners of Lincoln Park, Chicago, for 1906. Expenditures for the year for park and boulevard maintenance and sundry repairs and improvements amounted to \$366,428.17.

U. S. Department of Agriculture, Bureau of Entomology—Bulletin No. 65. The Tobacco Thrips, a new and destructive enemy of shade-grown tobacco. By W. A. Hooker. Issued April 19, 1907.

Bulletin 88, Experiment Station, Iowa State College of Agriculture and the Mechanic Arts, by L. H. Pammel, R. E. Buchanan and Charlotte M. King, Ames, Ia. This bulletin treats of the vitality, adulteration and impurities of clover, alfalfa and timothy seed for sale in Iowa in 1906.

Annual Report of the State Board of Horticulture of Colorado for the year 1905. Martha A. Shute, Denver, Secretary. This contains the proceedings of the annual meeting held in Denver, December 27, 28 and 29, 1905, including a large number of very valuable essays and papers on topics of horticultural interest. The index to this volume is very complete and adds greatly to its value as a reference book.

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

VARIETY IN SKY LINE

of nature and practice in choosing the best.

That art is the power of choosing the best and expressing the most. And that "a thing of beauty and a joy forever," must contain unity, harmony and variety.

These definitions apply to every work of art.

When we see a place without hills or trees of any consequence, or anything to break the monotony of the landscape (for instance, nearly the whole United States west of the Mississippi River until we reach the Rocky Mountain region) it is then we realize how useful and what great beautifiers trees are and how beautiful are our rolling, forest-clad New England hills. There are so many kinds of trees and they can be used in so many kinds of places and they are so necessary for the adornment of nature and the comfort of humanity. They give character and beauty and variety of light and shade and color and make the sky line varied and interesting. The different seasons of the year vary their beauty. In spring

point where the view will present itself in the best composition. On one side of the opening the trees should be larger or more important or in a more solid mass. It is never good composition to have two separated groups of trees of equal importance standing near each other. One group should dominate the other.

Observe the grounds in early morning or just before sunset. Then is the time that nature is most beautiful in her effects of light and shadow. Plan so that a fine distant view shall have a good shadow across the foreground. That gives greater solidity to the foreground and thus increases the aerial softness of the distance. When the ground is of a rolling nature this may be emphasized by planting taller kinds of trees on the higher places; let the valleys have fewer and smaller trees and low shrubbery. The house is usually the most conspicuous and important part of an estate and should be emphasized by backing it up well with large growing trees which will, in time, make a solid background. The planting of the rest of the estate

FORCING BULBS.

By Paul F. Richter before the Florist Club of Philadelphia.

Mr. Richter prefaced his remarks with the statement that he spoke from the view point of the seedsman and not from experience as a practical florist. Speaking of lilies for Easter forcing he said that the florist should not buy small-sized bulbs as for some reason or other the more mature or aged bulbs seemed to outgrow any sickly conditions. The most profitable bulbs for forcing were, in his opinion, the 7 to 9 sizes in *Harrisii* and the 9 to 10 sizes in *Mutiflorum* and *Giganteum*.

Many failures, he asserted, have been traced to the fact that the bulbs have not been thoroughly rooted. Many growers make the mistake of probably trying to get the very first shipments that arrive in the country, pot them up and get them in for Christmas. This is hardly necessary now-a-days, as very good cold storage lilies may be had for this purpose.

We have had occasion to observe that lilies handled in the following manner have bloomed most successfully, and have shown the least tendency to disease.

A small layer of well-rotted, cow manure in the bottom of the pot is very advantageous; the bulb is placed on this and the pot filled up with soil. After having been watered thoroughly they should be placed outside, say until October first, (where the bulbs have been potted in August), with a covering of sand, leaves, or other litter on top of the pots to protect them from the sun. When they are brought in, say in October, they can be placed under the greenhouse bench in a temperature of about 60 degrees, and left there until there is room in the top, or until they are to be brought into warmer houses to force.

Mr. Richter quoted as follows from the statement of a successful grower as to his method with *Lilium giganteum*, 9 to 11 size.

"Upon arrival of bulbs we pot at once in 4 inch pots, using coarse soft-coal ashes for drainage in the bottom of pots, and giving them a soil composed of sandy loam and well enriched with about one-third well-rotted horse or cow manure. Pots are placed under a dry bench in either a violet or carnation house, soaked down with water very heavy, and after two or three days we cover the pots with two or three inches of ashes. When Easter is early, as it was this year, we place lilies on bench after January 1st, giving them a temperature of 60 degrees night and 70 degrees day for about ten days, then 70 degrees night and 80 degrees day until buds can all be counted. During this period we manure-water them regularly once a week with the following liquids: One bushel fresh cow manure and one 4 inch pot full of nitrate of soda to each 50 gallons of water. Spray the foliage once a day (twice a day when clear weather). We try to keep the house moist otherwise by spraying the walls and walks. It is also very important to never allow the soil to get very dry, and we never feed unless the soil is moist.

When the buds can all be counted easily, we move them into houses where we can get the temperature down gradually, and finally mulch them with either a little sheep manure or bone flour, which will be sufficient feed until ready for market."

"Our experience with lilies, especially Japan, has proven to us that the only way you can get them good is to force them quickly and not check them in growth while temperature is kept high. As the root action becomes such that they can easily be knocked out of the pots without disturbing the ball of earth,

we shift them either into 5 inch or 6 inch pots according to strength of stock. Drainage in the pot is also of great importance when repotting is done. We use Nicotinic acid for fumigating."

The cold storage lilies which are now coming into great favor are confined principally to the varieties of *Longiflorum*, *Multiflorum*, and *Giganteum*. The latter variety, however, is much more desirable, as it seems to stand forcing better than the other two. *Longiflorum* is the next best, while *Multiflorum* is probably the poorest, as it is somewhat soft, probably due to the fact that in the green state it is the most free forcer of the Japan lilies.

To obtain the best results, cold storage bulbs should be potted immediately upon being received. They should be placed in a dark, cool place, —probably under the bench of the potting house would be the best. They should then be left there in a cool temperature as much as possible, until the pots are well filled with root growth when they should be removed to a greenhouse and started off at a temperature of about 50 degrees to 55 degrees, and kept thus until the buds set, when the warmth may be increased to 60 degrees or 65 degrees to 70 degrees.

Cold storage lilies should commend themselves to every lily grower, if it were only for the reason that they can be brought into flower in twelve weeks from the time they are potted. They require the space of the greenhouse but a very short time, compared with what is ordinarily required to bring the fresh stock of lilies into bloom, the saving being anywhere from two to three months, thus saving both labor and heat.

Referring to Paper White narcissi and Roman hyacinths he said that failures are generally due to not allowing sufficient time for forcing. He emphasized the fact that it is absolutely necessary to root all bulbous stock in a most thorough manner before bringing it into bloom.

Failures with tulips and hyacinths, he said, are frequently the result of unwise selection of varieties. For instance, the *Potterbakker* tulips, which may be forced very successfully at times, are in some years liable to go blind. The *Hollanders* claim that this is not a forcing tulip, and therefore should not be used for that purpose. There are a number of other sorts which can not be counted upon to bring the best success, such as *Chrysolora*, *Duchess de Parma*, and similar varieties. In their catalogs most seedsmen have the forcing tulips marked with an asterisk or some other method, and as the seedsmen takes his experience largely from the *Hollander*, it is well sometimes, if not always, for the florist to be guided largely by this.

As to Dutch hyacinths some persist in buying *Baroness von Thuy*, a handsome white sort, but not at all adapted to forcing for Easter. It has a tendency to "cut its throat;" that is, after the bud and stem have developed nicely, it seems to come to a stand-still below the foliage while the stem a little farther down simply rots off; what causes this I do not believe has ever been determined. Of the *Narcissi*, *Alba Plena Odorata*, *Poeticus*, and similar kinds, are wholly undesirable for forcing.

He recommended the *dielytra*, or *Bleeding Heart* as a good subject for

Easter forcing. They cost very little, require little attention to get them into flower, and pay equally as well as any Easter plant one could force. Also the Spanish irises which remind one very much of dainty little orchids. These may be planted among carnations, and will do very well. They bring a handsome price when cut, while the cost of the bulbs is in the neighborhood of \$3.00 or \$4.00 per thousand, and they require no attention from the time they are planted until they are cut.

The hardy Japanese lilies, such as *auratum*, *album*, *rubrum*, etc., while they can not be brought in very well for Easter, make an excellent lily for selling in pots or for cut flower purposes during the summer. They can be potted up when they arrive from Japan, say in October, and can be brought into flower without a bit of trouble by April or later as required. They cost considerably less than *Harrisii* and other Easter lilies, with which however, they must not be confused as they are not Easter subjects.

PLANT IMPORTS AT NEW YORK.

There were entered at the port of New York during the week of April 23 to 29 inclusive, the following plants:

From Holland: R. F. Lang, 1 cs. plants; McHutchison & Co., 2 cs. do.; P. Ouwkerk, 17 cs. trees; August Rolker & Sons, 1 cs. plants; Order, 8 cs. do.; Sundry Forwarders, 37 cs. plants, 18 tubs do., 4 cs. trees.

From Belgium: American Express Co., 14 tubs laurel trees; H. F. Darrow, 196 tubs laurel trees, 19 cs. plants; Chas. F. Meyer, 2 tubs laurel trees, 13 cs. plants; P. H. Petry & Co., 12 tubs laurel trees, 1 cs. plants; T. C. Pollock, 16 tubs laurel trees, 6 cs. plants; August Rolker & Sons, 97 tubs laurel trees, 1 basket do., 48 cs. plants; J. Ter Kuile, 16 tubs laurel trees, 5 cs. plants; Vaughan Seed Store, 80 tubs laurel trees, 42 cs. plants; R. M. Ward & Co., 16 tubs laurel trees; Sundry Forwarders, 194 tubs do., 107 cs. plants.

From France: Sundry Forwarders, 27 cs. plants.

From Germany: J. de Young, 4 cs. plants; Sundry Forwarders, 10 cs. do., 1 cs. trees.

Via Glasgow: H. E. Fish, 7 cs. plants. Via Liverpool: Sundry Forwarders, 4 cs. plants.

APPRAISER'S DECISIONS.

On the protest of F. B. Vandegrift against assessment of duties on mistletoe at the port of Philadelphia, the Board of General Appraisers on April 22, ruled that mistletoe stems with the natural berries attached are free of duty as a crude vegetable substance, under paragraph 617.

Baskets of wood shavings and bamboo strips are held dutiable as manufactures of wood, under paragraph 208.

Assessment of duty on cypress and beech leaves dyed and painted has been affirmed as proper under paragraph 425 as ornamental leaves, etc.

CATALOGUES RECEIVED.

Turkey Creek Nurseries, Barber-Frink Co., Inc., proprietors. Catalogue of oranges, pecans, grape fruit, figs, etc., besides the usual list of hardy fruits and ornamental trees and shrubs.

Robert Montgomery, Jr., who has been with Schlegel & Fottler, Boston, for the past two years goes to Dreer's Philadelphia seed store next week.

Seed Trade

Cool weather continues and though not extreme enough in the east, is nevertheless severe enough to seriously affect gardening operations, and it is now so late there is no hope of recovering the lost ground. In the west, regular winter weather prevails, with snow and freezing temperatures. Vegetation as far south as the latitude of Washington, D. C., is very backward, natives saying it is two to three weeks late.

Pears have quite generally been planted for seed purposes in Wisconsin, Michigan and Canada, and are coming up nicely. The cool weather, so long as it keeps above the freezing point, will not seriously affect them, but a little more moisture would do them good. The soil is in most cases in excellent condition to receive seed, and most root crops are planted and germinate quickly excepting in those sections where the ground has recently been covered with snow and freezing weather prevails.

The excitement anent the onion seed crop has mainly subsided, and the trade has settled down to await results. It will be some weeks, however, before the real situation will be known, and in the meantime let us hope it will prove less serious than early reports indicated.

The matter of raising funds for the entertainment of the seedsmen at their forthcoming convention in New York city is receiving attention from the local committee, and as is usually the case in such affairs, a few give liberally, while others require some urging. However, New York will not fail to extend generous hospitality to the strangers within her gates, and a most enjoyable time is assured to all who attend the convention.

W. Atlee Burpee sails for Europe in June, while his "right bower" Howard Earl "sails" for California a little later. Here are enterprise and progress reduced to a science. In giving honor to whom honor is due, it is only just to say that no house of this generation has done more to elevate and give prestige to the seed trade than W. Atlee Burpee & Co.

CERTAIN USES OF THE SCHOOL GARDEN.

(A Paper Read Before the Massachusetts Horticultural Society by Miss Anne Withington.)

In the conduct of my work of teaching city children something of the art of gardening, I have found much entertainment and often much profit in the casual remarks of the persons who hang over the fence to view the living scene. Of the contribution the city school garden makes to the panorama of city life I shall have more to say. My reason for introducing the casual observer here is that, like others who take a friendly interest in the school-garden movement, he usually has two reasons to justify the introduction of this new branch of learning into the school curriculum.

First—The moral effect produced by an acquaintance with Mother Nature.

Second—The economic benefit to be derived from teaching city children to cultivate the soil.

Now, it seems to me more is taken for granted in these two justifications than the premises warrant. It may be true—and who should know better than the poet? that—

"To him who in the love of Nature holds
communion with her visible forms,
she speaks

▲ various language,"

but it cannot be affirmed that mere familiarity with the world of out-of-doors begets understanding. We remember Wordsworth's farmer—

"A primrose by a river's brim

▲ yellow primrose was to him
And nothing more."

We recall in our own experience many a farm worker who performed his daily tasks as perfunctorily and with as little intelligence as the most machine-like of factory operatives.

For the second reason, the number of persons gaining a livelihood by agricultural pursuits is not likely at any time in the future to be more than a third of the whole population—if this proportion is maintained—and any technical training for this class should be furnished by technical, not public schools.

We cannot justify our invasion of the schools, it seems to me, unless we squarely face the fact that we demand from the schools some things our fathers did not demand and, further, that in feeling about for the instruments whereby these things may be achieved, we have come upon the school garden.

1st—The older education aimed to fill the pupils' heads with authoritative facts. Our ideal is the awakening of the latent faculties of the child.

2d—The so-called learned professions were the goal of the course of study, though, of course, many fell by the wayside. The medieval tradition of learning being a matter of monks, was transplanted to our shores and appeared in Puritan guise as education, even popular education being a preparation for the ministry.

The modern idea is that the public school shall fit for citizenship, not for a vocation, at least not the elementary school, but shall so develop habits of doing, habits of thinking, that any vocation to which the gifts of the pupil justify his aspiring may be worthily filled. And further, as some educator has pointed out, that he may be

fitted to survive in a world of ever-changing conditions.

3d—The schools of the past could concern themselves with "book-learning" solely, safe in the consciousness that the pupils were being trained in all kinds of manual arts, were learning many kinds of useful knowledge in the home, in the fields, in the workshop. Save for the knowledge country children acquire on the farm, all this training has passed from the ken of school children. The various movements for the introduction of training in the manual arts into the schools have been inspired by the consciousness of this lack in the life of the modern child. Indeed, most emphatical or unsentimental is the testimony from some sources. Those who defend the employment of children in factories and workshops declare that the child needs industrial experience to fit him for his future industrial life. So far we can go. But more and more public opinion is demanding that child labor shall not be exploited for the benefit of the employer, but shall be conserved in school for the benefit of the child.

We see remarkable evidences of the changed attitude on the part of educational institutions toward the kind of scientific knowledge demanded by modern industry. We are told that Harvard this year admits applicants for the degree of bachelor of arts who offer an accepted requirement in place of Latin, and we read this very week that that high citadel of orthodox educational ideas, Oxford University itself, has established a chair of agricultural science in recognition of the fact recently discovered by Oxford, that agriculture is a science! Surely with this august precedent we may embark on any school garden adventure we will.

If, then, we can convince ourselves that the printed word is not the only thing with which schools may profitably concern themselves, we may set about finding out the best way to teach a manual art—our gardening art, for instance. Here we are confronted with the differences in surroundings of various schools. However, whether we begin with the school in the crowded city, the factory town, the village or the country district, there are common uses to which the garden may be put. It may be used to teach arithmetic, geography, drawing, writing, spelling. Learning the multiplication table by planting peas is a pleasant process. Finding the area of a triangle in which one is to grow radishes isn't a distasteful task. When flax and hemp, winter wheat and rye, tobacco and peanuts are grown under our own observation the pages of the geography take on a new interest.

Then, too, there can be no such medium for teaching reverence for the miracle of nature, the renewal of life, as any garden offers. The coming up of the seeds, the formation of the seeds, the needs of the plant, the kinship of the vegetable and animal world afford many opportunities for the intelligent and sympathetic teacher to influence the child profoundly.

Moral instruction need not be a dismal matter. All the preachments in the world cannot illuminate the subject of regard for the rights of others as does one half hour's work in a

school garden. Correct habits of work can be taught in any garden. "They can fool you in the school room," said one of the Boston masters to me, as we watched the children at work, "but out here in the garden we can see whether they know or not."

All these things can be taught with like profit in any school garden. In some other respects the methods employed may be adapted to various ends. The country school garden might serve as a model for the community. No one familiar with our country towns in New England will deny that such a garden attached to the country school might be of inestimable service in calling attention to new ways of doing things, new plants, new varieties, new ideas. Such I am told is the purpose of some of the school work in Tennessee, where one of the county school superintendents is striving to base the school work on agriculture, which is the prevailing industry of the community. This, of course, is the theory on which Hampton and Tuskegee Institutes have been so conspicuously successful.

Then, in the village school we can see opportunities for making the garden of economic and aesthetic value. Much of the work of the village improvement societies has centred about the village school. Its grounds have been planted, its school rooms adorned. Why should the school not offer a place for learning how best to plant a small garden? How to obtain a succession of blossoming flowers? How colors should be arranged? How to plant ugly spots with vines and shrubs?

Then the factory town. Here we find ourselves confronted with the bare modern industrial problem which underlies all our efforts to make this a better and more lovely world to live in. I shall never forget the effect produced upon me by the sight of the little gardens in Fall River at the time of the strike in the cotton mills two years ago. The Portuguese operatives retain their love of the cultivation of the soil in spite of their factory life, and they have a habit of clubbing together and hiring a tract of land on which they grow garden truck. At the time of my visit, in mid-summer, these Portuguese, although among the poorest paid of the operatives, were able to withstand the long strain of the strike with less suffering than the better paid workers who had no garden produce to fall back upon. However, the entire absence of violence in any form during this strike was doubtless largely due to the fact that the farmers of the surrounding country brought in food supplies almost daily to contribute to the townspeople in distress. This has always seemed to me a striking illustration of the imperative need for systematic efforts to get the industrial population into closer relation to the soil. The factory town often offers opportunities for individual garden plots, and many, if not most, of the factory operatives, are country bred. The school in such a town can contribute in large measure to the economic welfare—incidentally to the aesthetic benefit of the community by encouraging gardening efforts.

The city school garden meets needs unknown to suburban or rural districts. It is often the means of first

introducing the child to the life which sustains it. It opens a whole new world of interest to the city child. A life outside the city begins to seem within the realm of possibilities. The city school garden does not effect an exodus to the country, but it stimulates a movement to the suburbs which is of inestimable value. Then, too, in accordance with the tendency to use the school as a social centre for the neighborhood, we find the city school garden offering many avenues of approach to the heterogeneous population which make up a city district. Most city dwellers are country born or bred and the sight of growing things—the very stirring of the ground in the spring—holds unbounded interest for the passerby. I have gleaned many a valuable piece of information from the interested man over the fence.

Would say and glad to say that I am sold out of my pansy stock. Thanking you very kindly for the immense business your paper has alone favored us with,

Your truly,
WM. DOBBERTIN,
Rochester, N. Y.

OBSERVATIONS ON THE CARNATION.

By Robt. M. Schultz, before the Morris Co. (N. J.) Gardeners and Florists' Society.

Having had but little experience with carnations, and trying to ascertain the best varieties to grow for the New York market, I canvassed the shops and noted the opinions of several wholesalers. We are now growing Mrs. Lawson, Enchantress, Queen and Victory, which to my mind is a good commercial combination, and, as I thought, the poor man's varieties, but one morning my wholesaler said to me: "What makes Enchantress go to sleep so quickly and why doesn't it hold its color? Why don't you grow a carnation like this?" holding up a bunch of Fair Maids. Looking them over carefully, I remarked the smallness of the flower, the color being very good. I compared them with Enchantress. I thought Enchantress would bring twice the amount he was getting for Fair Maid, but changed my mind when he pointed out the difference in keeping and shipping qualities, also its color. I saw both varieties that had been shipped two days previous by one grower; I saw them sold to a retailer, who preferred Fair Maid for the reasons mentioned above; I must admit that Enchantress did show up in poor shape, while Fair Maid was as fresh as if just picked. I just mention this incident to show you that size of flower does not count if it hasn't the color and the keeping and the shipping qualities. Three different persons spoke to me of this variety, and I believe it is worth a trial. They also mentioned Joost, Goethe, Abundance, Queen and several other varieties of the smaller types, and told me that these were the money-makers for Long Island and the Hudson growers.

Now the question arises: Is there more profit in growing these small varieties than in novelties and fancy kinds? Novelties and fancies embrace those kinds which are adapted to the private gardener and for show purposes, but I do not consider them profitable for a commercial grower. Would they, if grown more extensively for market, show a balance on the right side of the ledger? This is a question open for discussion, and I would like to see it threshed out and opinions given by growers more able than I to handle the subject. The ideal commercial carnation is the one that has size, color, stem, keeping and shipping qualities; produce one with these attributes and you will win favor with the commercial grower as well as the private gardener. This is the kind

the commercial man would like to handle, and the varieties that produce the greatest number of first-class flowers to the square foot.

Of the varieties in vogue there are some first-class ones to stick to, and of the new varieties of 1907 introduction we have several presented to us which we believe will make good. We have pinks, reds, and variegated forms to choose from, but as yet the commercial man has not found his ideal white, but from what I have seen and heard of late, I venture to say that the day is not far distant when we will see several good whites disseminated.

The commercial value of the carnation is being felt more every year, and many growers have and will discontinue growing roses, violets, etc., to take up and grow this divine flower. Those growers who can handle novelties and fancy kinds and produce the goods will no doubt be successful, but to the ordinary grower I say let novelties and fancies alone—stick to the ones from which you are sure to get the best results. A great mistake we growers make is to purchase very small lots of the new introductions that strike our fancy and grow them in an off-handed way in some remote corner, and when we see we have a good thing we say words to ourselves for not having purchased it in larger quantities and given it a better chance.

When a money maker is presented to you take the time to look it up; see it growing; satisfy yourself as to its commercial value; if it appears to you to be the right thing, stock a house with it, and if it proves a bread winner under your culture, you will have plenty stock to propagate from the following year.

ROSE-GROWING UNDER GLASS.

Extracts from paper read by David Falconer before the Morris County (N. J.) Gardeners' and Florists' Society.

I ought to be able to write, or say, something on this subject. But I found on trying the writing part that it was more difficult than the growing end.

I think a propagating house is a decided advantage over a part of a bench in the rose house; that is, of course, if you have it fixed so as to have control of the heat both top and bottom.

In the selection of wood we always select blind wood of a uniform hardness and do not put in any that have the eyes started.

I do not believe that flowering wood has any advantage over blind wood in regard to producing more flowers to a plant, or otherwise.

Young plants cannot be watched too

closely and must not have any luxuries, such as red spider, greenfly, getting pot-bound, etc.

A plant once checked in its growth will always show it when we get a dark spell of weather.

We dig up the sod in the spring; it seems to be sweeter and have more vitality to it than when composted in the fall.

Most soils that will grow good hay will grow good roses.

Our experience is decidedly in favor of old plants—that is, running them over a second year or even a third.

About the middle of July is a good time to begin drying to ripen the wood, to make it in condition for pruning. We give very little water for a few weeks until the plants nearly stop growing; then we trim out all the blind wood and cut back flowering wood to two or three eyes. Then take off about one-third of the soil, and fill up the beds with the same compost as we use for the young plants. Then we tie down the plant flat about a foot or so above the bed. For a few weeks they have to be syringed frequently to help them break.

We have tried the plan of not drying the plants, just pruning out a little blind wood and mulching them. By this method you get a few more flowers during the summer, but by the end of the year the other way is much ahead.

Do not allow the house to get hot with the ventilation nearly closed. I believe a close, stuffy atmosphere in a rose-house, especially in the morning, will create more mildew than any other cause.

Watering and syringing need a good deal of practice before a man can do it intelligently.

Syringe every bright day and just imagine that there is a red spider on every leaf when you are doing it.

I think there is nothing equal to the raised bench. You have got the roots under control as well as the tops and will produce more flowers in the winter season; besides, with the raised beds, you can get the heating pipes under them, which helps to dry out the beds when we have the short days.

I think a house from 20 to 28 ft. wide and about 200 ft. long is the most practical.

About the heating, a great deal depends on the location. For example, a house that has a rise of 6 ft. in 150 ft. would be difficult to install with a nice working steam system. Possibly an ideal heated house would be two-thirds hot water and one-third steam.

It would also be a safe combination in case of a break-down in either of the systems.

Successful and profitable rose growing is a problem of eternal vigilance, and the person who can pay the coal bills and many other bills, and get a good living out of the business is pretty much like the farmer, who, when asked how it was that everything was so prosperous on his farm, replied: "Sir, I understand my business and attend to it."

NEWS NOTES.

The Herman Schmidt Co., has leased the greenhouses of A. T. Roudebush at Oxford, O.

It is stated that Albert Linscott, Boston, landscape gardener, has failed with liabilities of \$1542.42; assets, none.

Wm. Miller & Son will demolish their old greenhouse established on Western avenue, Lynn, Mass., and will open a florist store in the retail district.

We learn with much regret of the disaster which befel the publication house of Arnaud & Co., Paris. On April 12 the building in which their business was conducted collapsed, killing and injuring many of the workmen. Most of their forms were destroyed, the composing room being in ruins. The editions of Mon Jardin for April 15, Villas et Maisons de Campagne for May 5 and Guide du Constructeur, the latter finished and ready to send out, were all lost.

PERSONAL.

Visitors in Boston: J. N. May, Summit, N. J.; C. B. Weathered, New York City; Winfried Rolker, New York.

Herbert M. Congdon has commenced work at the nursery of George Lowry, Pomfret Landing, Ct.

Bernard Kelly has taken a position as manager of the Hobart conservatories at Bridgewater, Mass.

We are happy to be able to report that the condition of August Loeber, travelling representative of Arthur T. Boddington, who has been critically ill at the Boston Emergency Hospital, is at present greatly improved, and the prospects are now promising for his recovery. This happy realization is, undoubtedly, due in great measure to the attentive care of his employers, Mr. Bunyard having spent the time since learning of his illness until last Saturday in Boston looking after and cheering him. It is an instance of rare unselfishness, and the reward is now in evidence.

CUT FLOWER MARKET REPORTS

BOSTON May starts in with a very low dispirited flower market on her hands in this neighborhood. Our report may be looked upon as pessimistic but it cannot be overdrawn as to present conditions. There is an overloading on all sides and no avenue of escape in sight. Supplies of flowers in all varieties and grades are increased heavily over last week's report. Prices are weakened all down the line and if the reader of these lines is looking for bargains we have given him the tip as to where they may be found.

BUFFALO Business in the cut flower line was slow during the first part of the week, but made a good ending by cleaning up well on everything except roses, the supply of these being very heavy. Carnations were not too plentiful, and sold out daily. As for violets, lilies, lily of the valley and other stock there was plenty to be had, and all of good quality. Beauties sold considerably better than during the previous week.

COLUMBUS The cold weather has very much shortened the supply of cut stock, especially carnations. It most certainly does begin to look dubious for Memorial Day trade. We can always do a large business here then, if we can have plenty of out-door stock, but there cannot be anything counted upon this year in this line. Trade is very good for the season, and prices are especially so. Bulb stock is over, and violets at about an end. The seedsmen are of course fairly busy, but April has been the duller in years. It has on the other hand, been a splendid long season for the nurserymen.

INDIANAPOLIS The demand for cut flowers has taken on a little livelier aspect and stock generally is moving at figures that are considered fairly satisfactory. While flowers are not exactly scarce the market is cleaned up every day. The best grade of Beauties is in good demand as also are Richmond, Killarney, Bride and Bridesmaid roses. Carnations are rather scarce; all growers appear to be off crop at once. Bulbous stock is almost cleaned out; a few tulips and daffodils are still coming in. Sweet peas and lily of the valley are fairly abundant and find ready sale. We are

still in the grasp of freezing weather consequently all outside vegetation is at a standstill. Smilax continues scarce while about half of the common ferns shipped are worthless. Orders are coming for veranda boxes and other outside work, but in most instances customers are advised to wait for warmer weather.

NEW YORK The conditions this week favor the cheap buyer and bargains are plentiful for anyone who can handle a crate or two or a wagon load of flowers to advantage. The market is weak on all lines, receipts being much heavier than of late and demand lagging. Prices are on the decline with little prospect of any boost until Memorial Day comes along. Quality is uniformly excellent in roses and carnations.

PHILADELPHIA Last week found the market in fair shape, nothing startling, prices ruling low, almost everything plentiful particularly in the rose line. Carnations were a trifle more abundant than the previous week, still were in rather short supply. Lily of the valley did not move extremely well although of good quality. Violets are now done for the season although the quality keeps up fairly well. Sweet peas did not command as good prices as the week previous. Good hardy ferns are not nearly equal to the demand. There is a fair demand for greens.

TWIN CITIES The first three days of the past week business was very good. Friday it started to snow and at this writing, Sunday, April 28, it is still snowing and blowing. The past few days trade has been at a standstill practically nothing doing, and the trade buying nothing, so that when it does clear up, some old stock

will be moved both by the wholesaler and retailer. Roses and carnations are about all that is on the market. Bulbous stock and violets are about through and only small lots are on hand. Some of the best Richmonds and Killarneys so far this season are being cut by one of our larger growers.

BUSINESS CHANGES.

Halliday & Smith have purchased the Pesenecker greenhouses at Jersey City, N. J.

Charles Sherwood will soon occupy new quarters at 303 E. Fourth St., Waterloo, Ia.

W. J. Pearce has purchased the business of the Pontiac Floral Co., Pontiac, Mich.

On May first, Mrs. E. M. Krauss moved from 209 to 109 South High street, Columbus, Ohio. Mrs. Krause having been in the trade a long time, has a very nice cut-flower business. Her new location is in the best retail district.

The business of Treanor & Rettic, South Bend, Ind., has been taken over by the South Bend Floral Company, who will remodel and occupy the rooms at the Oliver Hotel now leased by the former concern, after June 1. Mr. Treanor goes with the new company; Mr. Rettic retains the greenhouses and conducts them in his own interest.

Mrs. H. D. Jones has opened a new establishment at 187 South High street, Columbus, Ohio, that will be known as the Columbus Floral Company. Mrs. Jones is the daughter of Gustave Drobisch, who is the oldest and one of the best known florists in the city. Both plants and cut-flowers will be handled, the former from her father's greenhouses, and the latter from Chicago dealers.

HOW TO PAINT

Buggies, farm wagons, farming tools, barns, outbuildings and houses often need painting. "Everybody's Paint Book," written by a thoroughly practical painter, will be found a complete guide to the art of outdoor and indoor painting. It is designed for the special use of those who wish to do their own painting. It gives practical lessons in plain painting, varnishing, polishing, staining, paper hanging, kalsomining, etc.

It also tells how to renovate furniture and gives many hints on artistic work for decorating a home. Precise directions are given for mixing paints for all purposes.

If farming tools and farm vehicles are kept painted, they will last twice as long, and anybody can do the work with the aid of this book. It is handsomely and substantially bound in cloth. A copy will be sent postage prepaid on receipt of price, **\$1.00**

NOW—AND THE FUTURE

Living in the present is one thing—banking on the future, another. But taking lessons from the past is absolutely necessary if you expect to have anything to put in that bank in the future. For instance: Every one of you know how the profits go for repairs in an all-cypress house, and how the necessarily heavy framing casts quantities of shade. You also know that our Iron Frame House has an almost endless life and is the lightest commercial house possible to make. You know they cost a bit more at first, but save over and over again their extra cost, in the end. Then why don't you put that knowledge, that common sense, into action and have H. & Co. build you an Iron Frame House? Write now; tomorrow's your busy day.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

IT'S AS GOOD AS GOOD INSURANCE

One of our Iron Frame Houses—an insurance against repair costs—that yearly drag that pulls so on the owners of the wooden houses. Then when you do have repairing to do—some fifteen or twenty years from now—it will be an easy proposition—it will be the wood only—the Iron Frame will stand there for half a century without having a tap done to it.

If you believe in insurance against repairs—believe in building on the half century plan, then you believe in the iron frame greenhouse. Don't let the fancied cost deter you—we can show it up in black and white how you will win out way ahead in the end. Send for circular.

Alpine Flowers in a Cold Greenhouse

It seems, to say the least of it, most incongruous to write of alpine flowers (the very mention of which brings to mind mountain heights bejewelled with the fairest of nature's miniature plants) in a cold greenhouse, yet grossly artificial though this method of cultivation is. I know of none other that brings home to one the beauties of mountain flowers in the same degree. True, there is a finer spectacular effect when the plants

under the same roof such a cosmopolitan and attractive display as those whose home is in Alpine pastures, on mountain rocks and in hilltop woods.

Some of the many beautiful plants that one can grow are *Narcissus minimus* (the smallest of all daffodils), *Narcissus bulbocodium*, of which I send you an illustration, *Narcissus cyclameneus*, crocuses in variety, *Cyclamen ibericum*, *Anemone blanda*, hepaticas, *Saxifraga oppositifolia*, *S. burseriana*, *S. Boydii*, scillas, *chionodoxa*, primulas, irises and many more. Truly a regal procession of flowers and one that continues throughout two or three months.

In attempting to grow these plants it is most important to have gritty or sandy soil through which the water can pass away readily. In fact to such plants as saxifrages and sedums thorough drainage is so essential that the pans or pots prepared for them must be half filled with bits of broken flower pots, or "corks" as they are commonly termed. The best time to attend to these alpiners in the matters of dividing and repotting is at this season when their flowers are past their best. So that anyone interested in the subject ought to make a start at once. After dividing those plants that require it, they should be placed for a few days in a frame that is shaded and kept close. In the course of a week or two they must have an abundance of air, in fact the best place for them during the summer months is in an open

Alpine House in the Royal Garden, Kew.

are grown in the rock garden out of doors and one is able to provide conditions, soils and situations, more nearly approaching those in which Nature nurses her alpine plants, yet in the cold greenhouse you have them closely under view, you miss none of the delicate beauty and delightful charm so characteristic of these flowers of the high mountains throughout the world. The accompanying illustration shows the Alpine House in the Royal Gardens, Kew, when in the height of its beauty in the month of April. It is, as may be seen, a small span roof greenhouse, and it is absolutely unheated; it is, in fact, a cold greenhouse such as thousands must possess who have gardens. Unheated greenhouses are often bare in the spring months of the year except for a few pots of tulips, hyacinths and other florists' flowers, yet by cultivating a selection of alpiners in pots and pans it may be transferred into a fairyland of blossom, a place of fresh spring beauty when the outdoor garden is a world of drab and gray. And most of these alpiners are delightfully accommodating when tenderly cared for even though their roots are confined within the narrow limits of prosaic garden pots and pans instead of rooting freely into Mother Earth on their native mountain heights. You may have representatives from widely separated countries, each and all in the rudest health; in fact I know of no other class of plant that provides

Narcissus bulbocodium.

frame, the pots or pans being plunged to the rims in a bed of ashes. While growing they require fairly copious supplies of water but during the winter when growth is practically at a standstill the watering can must be used with care and a nice discrimination.

The S. A. F. comes out into the lime light

The Society of American Florists and Ornamental Horticulturists wins its case and the United States Express Company must reduce to a reasonable rate the unjust, excessive, and extortionate charges on cut flower shipments which it has been demanding for the past year. All the country knows it now; the news of the florists' victory has been carried by the daily papers to every community in the land, and the florist and his business at once attain a prestige and importance in the eyes of the public and the business interests of the country never before accorded them. HORTICULTURE extends sincere congratulations.

Sowing the wind and reaping the whirlwind

"'Twas a famous victory" and it invests the year 1907 in the history of the S. A. F. with an enduring distinction. It was a triumph, not of money or strength of numbers but of simple justice and was won because the only object sought was "a square deal." Many observant

men think they see in this ruling by the Interstate Commerce Commission the beginning of troublous times for the express companies. Possibly. But in so far as the intent of the complainants in this S. A. F. case goes no such purpose was in view, for, in the main, the express companies of the country have not been inconsiderate or unfair in their dealings with the florist trade. Doubtless by this time Mr. Platt sees a new light and would, if it were possible, recall the curt rejoinders given and arrogant manner assumed by his office toward those who, in the interests of justice, appealed repeatedly, but in vain, for consideration at his hands before asking for intervention. If other troubles for the transportation companies follow in the wake of this case the responsibility for "stirring up the hornets' nest" rests on the shoulders of the president of the United States Express Company.

Your duty
to your national
society

That oft-repeated, flippant query, "What's the good of the charter?" Wonder if we shall ever be compelled to listen to it again. That famous product of eleven years' zealous, persistent effort seems to have furnished its own answer in a very practical manner in this struggle against a powerful corporation. How deplorable it seems that all those for whose benefit the S. A. F. exists, on whose profession the national charter confers so much dignity, are not lined up to uphold as one man an institution which has, under so meagre a support as it receives, been able to accomplish so much of practical good. It was brought out at the hearing before the Interstate Commerce Commission that the annual receipts of the United States Express Company for transportation of flowers from the "Chatham district" of New Jersey to New York City amounted to \$30,000 under the old schedule before the rates were doubled up. It would appear from this that the direct saving to the flower growing industry of this one district by the ruling of the Commission must reach thousands of dollars annually while the indirect advantage and moral effect is very far-reaching and cannot be easily computed. In urging every reader of these lines who is not already affiliated with the Society of American Florists and Ornamental Horticulturists to at once assume membership we feel that HORTICULTURE but voices what should be looked upon as a privilege and a duty by those to whom the appeal is made. The S. A. F. should not be placed in the position of a suppliant.

Society of American Florists and Ornamental Horticulturists.

Incorporated by Special Act of Congress. Charter signed by Wm. McKinley, President, March 4, 1901.

PRESIDENT,

WM. J. STEWART, 11 Hamilton Pl., Boston, Mass.

Next Convention will be held at Philadelphia, Pa., August 20 to 24, 1907.

THE S. A. F. vs. THE U. S. EXPRESS CO.

INTERSTATE COMMERCE COMMISSION UPHOLDS THE SOCIETY'S CLAIM—REDUCTION IN RATES IS ORDERED.

The Story of the Case.

Chapter I.

THE GRIEVANCE.

Extract From the Report of Secretary Wm. J. Stewart to the Society at Its Meeting in Dayton, Ohio, Aug. 21, 1906.

Acting on the complaint of members living in New Jersey an effort was made by your secretary and also by the chairman of the legislative committee to get from the manager of the U. S. Express Co. a statement as to the reasons for the increased transportation charges made since last May upon flower shipments from New Jersey points to New York city, but we were met with a very decided refusal to give any explanation. A second request did not even receive the courtesy of an answer. Your secretary, in the meantime, had been making some investigations as to our privileges under the new Interstate Commerce Act, and on August 7, 1906, wrote the following letter:

Boston, August, 7, 1906.

Mr. T. M. Jones, Mgr.,

U. S. Express Company,

39 Broadway, New York, N. Y.

Dear Sir:—Referring to my letter of May 11, 1906, which thus far remains unanswered, I beg to state that in view of the universal sentiment of protest on the part of flower growers who are members of our society and whose interests are affected by the advanced rates on flowers shipped from producers in your territory to the New York wholesale market, I deem it to be my duty to submit this matter to the Interstate Commerce Commission for investigation and adjustment as is my privilege under the provisions of Section 13 of the amended Interstate Commerce Act, unless I receive some assurance from you that the increased charges complained of will be given prompt reconsideration by your company.

It would give me much pleasure to be able to report to our society at its convention in Dayton, Ohio, August 21-24, that the United States Express Company had taken this question under advisement and hoped to be able to announce a rate which would be generally accepted as just and reasonable. Yours respectfully,

(Signed) WM. J. STEWART,

Secretary.

This letter shared the same fate as its predecessor, no acknowledgment having thus far been received. I believe we have a good case; I know that the Interstate Commerce Commission will give us a prompt and courteous hearing, and hope we shall be able to arrange for the appearance of our legislative committee with necessary witnesses before that body at an early date.

Chapter II.

THE HEARING.

From Horticulture, March 23, 1907.

The hearing on the complaint made by Secretary Stewart of the S. A. F. last year against the increased transportation rates on cut flowers exacted by the United States Express Company finally came up before the Interstate Commerce Commission at Washington, on Friday, March 15, and continued two days. Attorney Frank Lyon appeared for the complainants and testimony was given by Frank L. Moore of Chatham, N. J., L. M. Noe of Madison, R. M. Schultz of Madison, L. B. Coddington of Murray Hill, F. H. Treadly, New York, A. Farenwald of Roslyn, Pa., A. J. Guttman, New York, and President W. J. Stewart of the S. A. F. Cost of special delivery service in New York city and reduced receipts because of the wagon express which has operated in competition with them for several years were given by the attorney for Platt's corporation as the reason for the high charges which, it was shown, are almost double those charged for similar service by other express companies. The attorneys have now been given thirty days in which to file briefs based on the testimony given and the decision will then be given by the Commission.

Chapter III.

THE DECISION.

Associated Press Report, Washington, May 6, 1907.

The Interstate Commerce Commission has rendered its first opinion in a case involving the reasonableness of an express rate. The case was brought by the Society of American Florists, who asserted that the rate charged by the United States Express Company on cut flowers from New Jersey points to New York City was unreasonable, excessive, and unjust. This rate till July, 1906, was 50 cents per 100 pounds and at that time was raised to \$1 per 100 pounds. Commissioner Franklin Lane, who delivers the opinion of the commission, holds that the rate should be reduced to 60 cents per 100 pounds.

The express company defended its increase by asserting that the delivery service given cut flowers in New York was much more expensive than that given other articles, and that it could not increase its rate a sufficient amount to meet the expense of this special service without largely increasing the total rate, because of its contracts with the railroads, under which it was required to pay 45 per cent. of its gross receipts to them.

From the opinion of Commissioner Lane it appears "that the United States Express Company has contracts with the Delaware, Lackawanna & Western Railroad Company by which

the railroad company receives 45 per cent. of the total gross receipts of the express company; that the service rendered by the railroad company is no greater or different under the new rate of \$1 than it was under the old rate of 50 cents." The Central Railroad Company of New Jersey receives 43 per cent. and the Lehigh Valley Railroad Company 40 per cent. under the same conditions. Agents are also paid on a percentage basis.

The opinion continues: "Elaborate tables have been presented by the defendant tending to prove that the rate of 50 cents was unremunerative, owing to the percentage which it paid to the railroad, added to the percentage which it paid to its agents and the cost of delivery in New York. From these same figures it can also be adduced that the present rate of \$1 is unremunerative; and it may well be said that from an analysis of the charges made upon any single commodity or class of commodities transported by this company a similar result could be arrived at.

"In order to increase its business, the express company gives an especially prompt service to flower raisers. There is no evidence that this is not done by all express companies or that it does anything with respect to this traffic which transportation companies do not generally do as to certain classes of perishable freight. But, admitting that an extra return should be made over and above that received for the carrying of articles generally transported by express, no reason has been shown why the railroad charges and agents' pay should be doubled, excepting that the express company has to pay double the amount under its contracts to its agents and to the railroad company—a necessity or condition which we cannot recognize as controlling as to rates.

"The defense of this rate is not at all unlike that which a railroad might make were it to attempt to show that the value of the service which it renders was based upon contracts made with its bondholders by which the latter were entitled to receive a proportion of the proceeds of each individual rate, no matter how grossly excessive the resulting amount might be. Neither this commission nor the courts have given sanction to any such inequitable and unscientific method of rate adjustment.

"Such contracts are entirely between the parties themselves. They are not in the nature of fixed charges, because they are not fixed. They move upon a sliding scale, dependent entirely upon the rate. And it would be against the highest public policy to permit rates to be controlled by such contracts, because such practice must inevitably tend to promote the increase of rates on express service.

The railroads could, through such contracts, control the rates to be fixed by the express companies, and it would be to their interest always to increase rates so long as the traffic would move thereon, for thereby their portion of the receipts under the contract would be increased."

The order of the commission requires the United States Express Company to desist from charging the one-dollar rate after June 15, and directs it to put in a sixty-cent rate from Chatham and Somerville, N. J., to New York City; a seventy-two cent rate from Allentown, Penn., to New York City, and from Philadelphia, Hillside, and Dorranceton, Penn., a ninety-cent rate. The order also directs the reduction on rates on empty flower boxes from New York City to the points named to the merchandise rate of 50 cents per hundred pounds.

The question of reparation to injured shippers is held in abeyance subject to proofs to be taken.

REGULATING THE EXPRESS.

(Boston Herald Editorials.)

Express rates must come down, too. Imagine the feelings of the venerable Mr. Platt, whose company is operated upon for a starter. Is there to be no consideration for aged statesmen engaged in business on the side?

The Interstate Commerce Commission has rendered its first opinion in an express company case, and it is against the company. The defense rested on the contracts alleged to exist between itself and the railroad company carrying the goods, by the terms of which so large a part of the rate charged was taken by the railroad that the balance remaining to the express company was only a reasonable reward for the service. But the commission brushed this aside and fixed a lower rate, saying that extortionate contracts with the railroads were no excuse.

Thus we have another extension of federal authority, but a necessary and welcome one. Unless some board or commission is clothed with power to compel the express companies to conform their charges to reason it is hard to see where the ordinary man is to have any redress for the overcharges they intend to make. Their business, like telephoning, has become a necessity of modern life.

PERSONAL.

Jno. Ross, gardener on the Francis Peabody, Jr., estate, Hyde Park, Mass., sails for Scotland on May 14.

George Reed, for the past year in charge of the new park at Homestead, Pa., has resigned and accepted a position as assistant with H. Wesley at P. V. Thompson's, Uniontown, Pa.

B. S. Slinn, Jr., of New York, has been ordered to Arkansas Hot Springs by his physician, and will stay there for the next two months. Mr. Slinn has been a great sufferer from rheumatism for some time.

Fred Windmiller, now with the Cleveland Cut-Flower Company, was in Columbus, Ohio, last week visiting his old friends. For years Mr. Windmiller was in charge of the greenhouses here of the Livingston Seed Company.

ROSES.

Abstract of a Paper read before the Morris County Gardeners' and Florists' Society by Andrew Kennedy.

Roses started from cuttings are probably the best for small growers and private gardeners, but for large commercial plants I think the grafted stock is more easily grown and will yield larger profits.

In propagating from cuttings there are two points that I think cannot be mentioned too often; one is always, and at any cost, to propagate from clean, vigorous stock; and the other, which I consider equally important, is: don't hurry the rooting process.

Cuttings that are kept cool and moist and are ready for potting, that is have emitted roots a quarter inch long at the end of the fourth week after insertion, will invariably make better plants than those that are rooted in less time.

Potting and repotting as growth necessitates will be in order till June, when the plants should be benched. If, for two months after benching, the growing has been as nearly natural as possible the plants should be strong enough to begin cutting and forcing.

Cutting is very important at this stage of growth; the prospects for the whole year are often blighted by an indiscriminate use of the knife. Early cutting does not pay, for prices are usually low, and I do not hesitate to say if all buds are taken, pinching those on small wood and cutting bottom shoots with four to six eyes as soon as the buds show color, the future strength and productiveness of the plant will justify such treatment, for it is generally admitted that developing the buds is the greatest tax on the energy of the plant.

After cutting begins, syringing will generally furnish all the clear water necessary, and all other water used should be more or less enriched unless on some occasions when the bench would be too dry to receive manure water, when a light watering with clear water should be given first.

I consider liquid feeding by far the best during fall and winter, for then the surface of the soil may be scratched lightly and the whole bench will dry in less time than if covered with mulch, and if my observation is right a bench that can be dried and watered often during the winter will produce a more active growth than one kept continually wet. About February 1st, when the days get longer and brighter, the plants will readily take hold of a coat of mulch and it will act both as a feed and a covering for the roots that have reached the surface.

When the plants begin to break from the old wood it is time to start pruning, and by the time the new shoots have finished their foliage the greater part of the old blind wood should be cut away; thus during the spring months the plants will present almost as pleasing an appearance as they did in early fall.

John C. McCarthy, formerly with Geo. Lee, Beverly Farms, has taken Peter Ward's place at the Oliver Ames place, Pride's Crossing. Mr. Ward has taken the position of gardener for John Caswell, Pride's Crossing.

OBITUARY.

Hendrik van Waveren, of the firm of Waveren Brothers, bulb growers, died at Hillegom, Holland, on March 24, aged 96 years.

Frederick E. Shaw, for the past twelve years engaged in the florist business in Utica, N. Y., died on April 29, aged 56. A widow and two children survive him.

John L. Bingham, a plant and bulb grower of Oyster Bay, N. Y., died on April 30, aged 38 years. Mr. Bingham was tax collector of the town. His death was caused by pneumonia.

Col. Henry W. Wilson, a prominent and active member of the Massachusetts Horticultural Society, died at his home in South Boston, Mass., on May 7, aged 73 years.

Col. Wilson was identified with many prominent engineering projects, including the filling in of the Commonwealth Park flats, the water measurements on the Merrimack river, the sewage systems of Chelsea and the construction of the Metropolitan Street Railway. He was connected with the city engineer's office until 1863, when he resigned to take up private practice. He served for many years on the garden committee of the Massachusetts Horticultural Society. His companionable and cheery disposition brought him a host of friends among the horticultural fraternity.

FLORISTS' CLUB OF WASHINGTON.

The regular monthly meeting of the Florists' Club of Washington was held May 7th at Gude's Hall, with Pres. Bisset in the chair. The meeting was not so well attended as usual, owing to the inclemency of the weather. Particular attention was called to bogus advertisements which appear from time to time in the trade papers, and to which several parties have fallen victims. One member stated that he sent an order for chrysanthemums accompanied by cash. He waited several weeks before having any reply; finally he received a letter, saying that all the stock was exhausted and offering to send celery plants. It is hoped that some plan may be decided upon whereby the clubs can work in unison with the trade papers and suppress all such fraud.

There has been some slight confusion as to prizes won at the Rose Show occasioned by parties who made entries, sending their fee to Sec. Hammond, instead of to Sec. McCauley, when the exhibit was before the florists' club. Sec. McCauley was instructed to take up the matter with Sec. Hammond at once, so we may soon hope for a final adjustment of all matters pertaining thereto.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

THE IRIS.

(Read Before the Massachusetts Horticultural Society by J. Woodward Manning.)

While the genera of Iris are confined almost exclusively to the Northern Hemisphere ranging from the Atlas Mountains in northern Africa to a latitude of about fifty degrees north, the Iris family is closely represented in the tropics by the moraeas and maricas similar in effect but botanically distinct, while crocuses, freesias, tigridias and ixia are familiar genera and serve to represent the family in all parts of the temperate and tropic world.

The iris, or as popularly known, the fleur de lis, rainbow-flower or poor-man's orchid, etc., has more than 170 described pure species, of which about 100 have been cultivated at times by American horticulturists while somewhat more than 130 species are grown by English iris fanciers among which, however, a portion fail to combine sufficient distinction, beauty or ease of culture to warrant their extended use. While, however, perhaps less than a hundred species are to be recommended for cultivation in American or particularly New England gardens, this is but a fraction of the number of varieties which by selection or cross fertilization have been produced and contribute most advantageously to garden ornamentation.

The question of the best species, their peculiar requirements, if any, their ornamental and color effect, their better varieties and season of bloom are matters of interest to the New England flower lover, because there is much of neglected beauty in the class from lack of this knowledge and danger of disappointment from a misunderstanding of the limitations in color range. It is possible, too, to very materially extend the period of bloom as compared with the usual results attained in the flower garden.

Such irises as figure in horticultural uses are divided into two classes, those of bulbous nature and those with rhizomes, the latter varying in this character from the conspicuous surface rhizomes of the very familiar German iris to very narrow, inconspicuous, subterranean types of rhizomes in which the roots are the more conspicuous.

The bulbous irises are most familiarly known by the English and Spanish types, both of which have been very greatly improved by selection. The English Iris (*Iris xiphioides*), growing to a height of a foot and a half to two feet, bears two to three flowers to a stalk and varies in color from the purest white form of Mont Blanc through shades of lavender, blue and purple, of which Lord Palmerston with deep rich crimson purple falls and purple-claret standards is perhaps the best of the darker colored varieties. Many too are showily striped, flaked and blotched with shades of richer colors than the general tone of the flowers. The Spanish Iris (*Iris xiphium*) has taller and more conspicuous standards than the last and the markings are more clearly defined on the falls than is the case with the English Iris; possibly the improvement by selection has covered a longer period with the Spanish Iris. In any event such variety as the Thunderbolt is very noteworthy in its large comparative size of flower and grows two

feet or more high. The flowers are richly colored in bronze with a remarkably broad signal patch of yellow on each of the falls. The better varieties of this class are *Blanche Superba*, of purest white, *Golden Cup*, a very popular yellow, and *Cantab* of ultramarine blue with orange blotch and dark blue standards.

Both English and Spanish Iris are of easy garden culture, planted in autumn, the English Iris requiring the greater moisture of the two, the bulbs being planted at a depth of from three to five inches while a mulch is an advantage. There are a few other species of tall growing bulbous Irises, such as *Iris Juncea* and the rare *Boissierii*, but they probably are seldom imported and do not compare horticulturally with the selected varieties of the last two species.

The dwarf bulbous species are most familiarly represented by the *Iris reticulata*, a native of Palestine, varying somewhat in type but gorgeous in coloring with its brilliant shadings of purple and gold and a delicious violet fragrance. Flowering as it does naturally in March our climatic conditions require its cultivation in frames to protect the flowers from staining by dampness, though it is hardy and can be used very advantageously in rockeries or in protected sunny situations within easy access to the house. The Armenian Iris *Bakeriana* is even earlier, but less showy, though of rich markings of purple and orange in connection with its general blue tone. *I. Variata* is another species from Asia Minor, but more difficult to manage than the others and more tender.

Another class of bulbous species are known under the name of Juno Irises, natives of the Caucasus, Afghanistan and Northern India. They have comparatively large bulbs and require well drained situations and a thorough sun baking in summer to insure their continuance and future flowering. They have generally leafy stems with several flowers closely set to the stalk and combine all the ranges of coloring in the family. They closely follow the last group in their flowering period, but their inadaptability for cutting and the peculiar cultural conditions they demand without particular increase in their color range fails to promise much for their culture in American gardens except to the fancier. Of them *I. Rosenbachiana*, *Sindjarensis* and *Assyrica* are perhaps the best.

Of rhizomatous irises the bugbear class is that of the *Onocyclus* group, generally known as Cushion Irises. The most familiar species is the *Mourning Iris* or *Iris susiana*. All have very broad petals, and among them are the most remarkable forms in coloring. Many of the flowers are most delicately veined and reticulated generally with a darker color on a light background, and were they of easier growth they could not fail to be popular in every garden. They are from Persia, Armenia and Afghanistan and naturally require hard sun baking after their short blooming season. They can hardly be called hardy, and in any event require such special cultural attention that they cannot be recommended. The wonderfully full flowers with their peculiar markings such as shown in *I. paradoxa*, *Iberica*

and the so-called (Prince of Irises) *I. Gatesi* makes them particularly interesting and tantalizing.

Closely allied to the *Onocyclus* group is another popularly known as the *Regelia* section, in which the petals are narrower and the plants are hardier and considerably more easily cultivated, but of even greater importance is the fact that they hybridize freely with the *Onocyclus* group and the progeny are comparatively easily cultivated, increase rapidly and are of prolific blooming quality. Mr. C. G. van Tubergen, Jr., of Haarlem, Holland, has been largely responsible for this group of so-called *Regelio-Cyclus* Irises, obtaining them by crossing *Iris Korolkowii* and its varieties; *I. Leichtlini*, *I. Sara* and *I. Suwarowi* with various species of the *Onocyclus* group. Such resulting progeny as *Psyche*, lavender beautifully striped with rich purple with darker toned falls, *Charon*, rich coppery purple with deep purple markings and *Iphigenia* intermediate in its color range show something of the result, while the shape of the flowers is a happy medium between the two groups.

Probably this group has not been extensively cultivated in this country as yet, and we will look forward with deep interest to the results.

(To be continued.)

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

BUFFALO, N. Y.—E. C. Brucker, 385-87 Ellicott St.
CLEVELAND, OHIO—A. L. Hutchins, 2220 East 74th St.
COLUMBUS, OHIO—M. B. Faxon, 246 Oak St.
CINCINNATI, OHIO—Frank W. Ball, 31 East 3d St.
DETROIT, MICH.—Frank Danzer, 1487 15th St.
INDIANAPOLIS, IND.—George B. Wieland, 1610 N. Illinois St.
LOUISVILLE, KY.—F. L. Schulz, Jr., 1325 Cherokee Rd.
MONTREAL.—William Cooper, 338 St. James St.
NEWPORT, R. I.—David McIntosh, Ledge Road.
PHILADELPHIA, PA.—George C. Watson, Dobson Bldg., 9th and Market Sts.
PITTSBURG, PA.—James Hutchinson, corner Dunmoyle and S. Negley Aves.
TWIN CITIES—John A. May, 163 Iglehart St., St. Paul, Minn.
TOLEDO, OHIO—J. L. Schiller, 829 Prouty Ave.

BUSINESS CHANGES.

Gunther Bros. have removed to their new wholesale store on West 28th street, New York city.

The Mountain Park Greenhouse is the name under which H. W. Girton of Ridgeway, Pa., will do business hereafter at 132 Main street. He has purchased the stock of W. S. Smathers.

Rene Brower, formerly of the firm of W. H. Brower's Sons, New York city, has opened a retail florist business in the Coogan Building, where are located the flower market and a number of wholesale firms.

You'll find something worth reading on every page of this paper.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

Saturday, May 4, was the date set for the annual May exhibition, but so unpropitious has the spring weather been that much material intended for this show was not in readiness, and while the display was excellent in every particular, it was much smaller than usual, and it was thought best to set a date two weeks later for a supplementary show. Martin Sullivan, gardener for William Whitman, was the largest contributor. His fancy pelargoniums were very fine. Darwin tulips and narcissi were also shown extensively by him. A specimen *Rhododendron formosum* from J. L. Smith, gardener to Mrs. A. W. Blake, was a centre of attraction, as were some superb branches of Marechal Niel roses from George Page, gardener to Mrs. Fred Ayer, one of the latter bearing twenty-nine flowers. In the orchid section, J. T. Butterworth opened the eyes of the visitors with a specimen *Cattleya Mossiae* bearing fifty-nine flowers; the same plant produced forty-four blooms last year. The display of spring flowering bulbs and other seasonable garden material from Harvard Botanic Garden, W. N. Craig, W. J. Clemson and others was excellent. Prizes were awarded as follows:

Pelargoniums—First, William Whitman. Tulips—First, William Whitman; second, W. J. Clemson.
Darwin collection of twelve named varieties, one twelve-inch pan of each—First, William Whitman.
Hardy Narcissuses, collection—First, Langwater Gardens; second, William Whitman; third, W. J. Clemson.
Pansies—First, Mrs. A. W. Blake; second, Mrs. E. M. Gill.
Silver Medal—J. T. Butterworth, for superior cultivation of *Cattleya Mossiae*.
First Class Certificate of Merit—George Page, gardener to Mrs. Frederick Ayer, for superior cultivation of Marechal Niel roses.
Honorable Mention—Harvard Botanic Garden, New Primula, P. Poissoni; Mrs. Frederick Ayer, *Acacia pulchella*; William Whitman, superior cultivation of *Cattleya Skinnerii*.
Asparagus—First, Edwin Parker.
Beets—First, A. E. Hartshorn.
Cucumbers—First, Geo. D. Moore.
Dandelions—First, J. B. Shurtleff, Jr.; second, Mrs. Frederick Ayer; third, A. E. Hartshorn.
Lettuce—First, G. D. Moore; second, Mrs. A. W. Blake; third, A. E. Hartshorn.
Parsley—First, W. J. Clemson; second, A. E. Hartshorn.
Radishes—First, Ed. Parker; second, A. E. Hartshorn; third, G. D. Moore.
Rhubarb—First, G. D. Moore; second, Alice A. Warburton; third, Ed. Parker.
Collection of Vegetables—First, Ed. Parker.

The Committee on Prizes and Exhibitions of the Massachusetts Horticultural Society has issued the following list of additional special prizes for the Chrysanthemum Show of November 8-10, 1907:

No. 469. For the best arranged table of cut Chrysanthemum blooms; all classes admissible; tables to be 8x6 feet; for commercial growers only; four prizes \$40, \$30, \$20, \$10.
No. 470. For the best decorative arrangement of cut Chrysanthemums, with autumn foliage or other suitable material, filling a table 8x6 feet; all classes admissible; for retail store florists only; four prizes \$40, \$30, \$20, \$10.
No. 471. For the best vase of one hundred Chrysanthemum blooms, of one or more varieties, in the Society's large china vases; tasteful arrangement will be con-

sidered; offered by George R. White; four prizes \$40, \$30, \$20, \$10.

No. 472. For the best vase of fifty Roses, of any one variety; three prizes; (first prize offered by Francis Skinner) \$50, \$30, \$20.

No. 473. For the best six vases of Carnations, fifty blooms each, of any one variety; four prizes \$40, \$30, \$20, \$10.

No. 474. For the best made-up centerpiece of growing plants, suitable for a table of eight covers; offered by the Gardeners' and Florists' Club of Boston; three prizes \$12, \$8, \$5.

No. 475. For the most tastefully decorated table of Fruits, 8x6 feet; autumn foliage and berries may be used to produce a pleasing effect, and the fruits may be either native or foreign; four prizes \$40, \$30, \$20, \$10.

No. 476. For the best collection of Vegetables of fifteen varieties, not more than two kinds of any variety admissible; the number of specimens of each variety must be the same as given in the annexed scale of points; tasteful arrangement will be considered; to assist in the decoration of the collection parsley or other vegetable greenery may be used; mere size of specimens shown will not necessarily entitle the exhibitor to the highest award; for private gardeners only; four prizes; first prize a Silver Cup valued at \$75, offered by R. & J. Farquhar & Co.; the Society offers also second, third, and fourth prize \$25, \$15, \$10.

On account of the backwardness of the season the date of the Rhododendron Exhibition scheduled for June 1st is changed to Saturday, June 8th.

WM. P. RICH, Secretary.

TARRYTOWN HORTICULTURAL SOCIETY.

The monthly meeting of the Tarrytown Horticultural Society was held on April 30, president Howard Nichols in the chair. Four magnificent specimens of *calceolaria* in 6-inch pots were exhibited by Mr. Atkinson, gardener to Henry Siegel, Mamaroneck, N. Y., who was awarded a cultural certificate for same. He was also awarded a cultural certificate for two pelargoniums Robt. Allen, gardener to E. C. Benedict, Greenwich, Ct.; was awarded a cultural certificate for a cluster of tomato Princess of Wales, there being 23 good sized fruits on the cluster. The monthly prize for two foliage plants was awarded to D. McFarlane for *dracaena* Lord Wolseley, and *croton* Lady Zeland. Henry Siegel offers a silver cup for the best table of ferns and flowering plants at the fall show. The society voted to donate \$25.00 towards the fund for the proposed new hospital, and to make a charge of 25 cents admission to the June show, the proceeds to be turned over to the hospital fund; also to lay out and decorate the grounds around the new hospital exclusive of the rough grading.

D. McFARLANE, Cor. Secy.

NEW YORK FLORISTS' CLUB.

Members Take Notice.

Through unforeseen circumstances we will be unable to meet in the Grand Opera House building, our usual meeting place. The next meeting will be held in the Hotel Earlington, 55 West 27th street, between 6th avenue and Broadway, at 7.30 p. m., Monday, May 13th. S. S. Skidelsky will deliver an address on the coming National Flower Show in Chicago.

JOHN YOUNG, Secretary.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting in Manchester on May 3rd, President McGregor occupying the chair. P. R. Sanborn gave a most interesting talk on the Fundamentals of Gardening, saying in part as follows:

The fundamentals of gardening are embodied in a thorough understanding of the natural elements which produce the living plant and which the gardener or farmer must realize in order to bring the plant or crop to maturity, exactly as the manufacturer must understand the qualities and condition of the raw material which passes through his manufacturing plant in order to produce the finished product.

The raw materials which form the basis of all plant life are soil, water and air. The soil is composed of particles which form into kernels and these kernels hold the water not as a sponge but as a film around each kernel where it is held by capillary attraction, the same unseen force that draws the oil through the wick of a lamp. In cultivated soil nearly 50 per cent. of the volume is taken up by air and water.

According to experiments made by Prof. F. H. King actual solid soil grains occupy less than one-half the space in a given bulk of soil. In coarse, sandy soils the particles are larger and there is less vacant space, and what space there is exists as larger channels through which air and water move more freely and rapidly. At a depth of four feet the vacant space is about one-third that of the first foot or surface soil; in heavy clay soil half the volume was water or air space. Ground may easily become too compact for the best growth of plants, as is the case below the first foot or so of cultivated ground. A cubic foot of solid soil grains will weigh 165.4 lbs.; a cubic foot of fertile clay loam at the surface will weigh but 79 lbs., less than half of 165.4 lbs. It must be therefore that the actual solid soil grains occupy less than one-half the space in a given bulk of soil. It is the business of the farmer or gardener, by cultivation to keep the pore space between the soil particles up to nearly 50 per cent. of the total volume of the soil. This fact forms the fundamental reason why we must plough or fork over our gardens, keeping them porous and admit free circulation of air, without which their fertility could not be preserved.

If, as sometimes happens, the water is in excess and fills the air-spaces, crops cannot grow for want of air and such land must be drained in order to bring it to fertility. The average rainfall for the eastern States from May to October, is over 2000 tons to the acre; enough for all purposes if evenly distributed, which is seldom the case, and it often happens that the rainfall is far short of the needs of the growing crops, to say nothing of the immense amount drawn from the soil by evaporation.

Prof. Smith tells of an experiment where the loss by evaporation from a square foot of loam was nine pounds in seven days, equal to a loss of 200 tons per acre. Ground that is compact

at the surface loses more by evaporation than ground which is loose and frequently stirred by the hoe or cultivator. Early plowing or spading is of the utmost importance both to the land and to him who tills it. The continuity of the soil particles and kernels is broken up, the evaporation of water stored in the lower layers of the soil is prevented, channels are opened for the free ingress of air, thus fertilizing from above and holding in restraint the water beneath. The two combined are finally absorbed by the rootlets of the growing plant. Other things being equal we have the right to expect and receive a bountiful harvest.

The cultivation of the soil around the growing crops is another work of great importance. A heavy shower followed by dry winds will form a crust on the surface; this is caused by the soil particles or kernels becoming united by compaction; evaporation sets in and unless the cultivator or some other implement is set in motion at once the crop will soon be in a worse condition than it was before the rain, owing to the drain upon the supply stored below. There are many other fundamentals beside soil, air and water. Water as a solvent, soil-temperatures, formation of humus, getting nitrogen into the soil, nitrification of manures and many others.

After a brief discussion a vote of thanks was extended to Mr. Sanborn for his able paper. WILLIAM TILL.

SOCIETY OF AMERICAN FLORISTS AND ORNAMENTAL HORTI- CULTURISTS.

Department of Plant Registration.

John A. Macrae, Providence, R. I., on February 6, submitted for registration, *chrysanthemum* Golden Dome, sport of Yellow Eaton 1904, form of Bonnaffon, color deeper yellow, but same characteristics of growth, habit and size of flower, darker foliage than parent, height between 3 1-2 and 4 feet.

A. C. Zvolanek, Bound Brook, N. J., on February 28, submitted the following new Christmas flowering sweet peas, Le Marquis, seedling from Wm. J. Stewart x Gladys Unwin, violet blue; Mrs. George Lewis, seedling from Watching x Gladys Unwin, white; Mrs. A. Zvolanek, seedling from Helen Pierce x Christmas White, white, blue notched; Mrs. Chas. H. Totty, seedling from Mrs. Alexander Wallace and light-blue unnamed seedling, sky blue.

Alexander Montgomery, Waban Rose Conservatory, Natick, Mass., on March 18, submitted for registration, rose White Killarney, sport from Killarney, with same form, habit and more petalage, color clear white.

P. J. HAUSWIRTH, Sec.

Ladies' Auxiliary.

As the work of the Ladies' Auxiliary progresses I find many of the 800 circulars sent out Nov. 8, '06, found a resting place in the waste-basket, as I have been informed by some of the members of the S. A. F. Therefore, through the trade papers, I invite all ladies who are in the trade, directly or indirectly, to join the Auxiliary and meet with us at Philadelphia next summer.

MRS. CHAS. H. MAYNARD, Sec.
219 Horton Ave., Detroit, Mich.

FLORISTS' CLUB OF PHILADELPHIA.

The May meeting of the Florists' Club of Philadelphia was one of the best attended since President Samuel S. Pennock took hold, and that is saying a good deal. The attendance was large and the enthusiasm inspiring. Convention matters took up a large amount of the time, and according to all indications there will be a good time in Philadelphia for everybody next August. A committee of thirty, to be sub-divided into various sections for the management of the convention, was ordered and was held under advisement by the chairman. Another prominent feature was the address by J. Otto Thilow of Dreer's on the Equipment and Organization of a Modern Horticultural Establishment, which appears in full on another page of this paper. Joseph Heacock voiced the sentiment of the members on the large attendance and the enthusiasm which has never been better. Godfrey Aschmann was elected a member of the club after having held aloof for about twenty years, and many other ought-to-have-beens were also put through. The finance committee reported progress and hope to have even a better showing by next month. An excellent exhibit of fancy pelargoniums was staged by Samuel Batchelor, and a fine lot of *Cattleya gigas* Sanderiana by Alphonse Pericat. David Rust was elected secretary to fill the unexpired term of Edwin Lonsdale, resigned. The subject for next meeting will be announced later.

NEW JERSEY HORTICULTURAL SOCIETY.

The regular meeting and floral display of this society took place on May 3. Orchids were in force. Beautiful specimens were exhibited by Julius Roehrs Co. and J. A. Manda. The latter showed *Cattleya* William Murray, hybrid of *C. Lawrenceianum* x *C. Mendelii*, for the first time in this country; George C. Graves, Edwin Thomas gardener, John Crosby Brown, Peter Duff gardener, Stewart Dickson, Albert Lerson gardener, Charles Hathaway, Max Schneider gardener, also had attractive exhibits. The Colgates, Wm. Reid gardener, were awarded 96 points for specimen *Medinilla magnifica* with 25 blooms. John White had a fine collection of pansy blooms. Letters were read from Chas. Munn, in recognition of the resolutions of condolence received from the society, Georgia Horticultural Society, American Civic Association, and Centennial Association of the Oranges, seeking active co-operation with the society. Reports were made upon the guarantee fund for the fall show; June 7 was selected for the rose show and November 6 and 7 for the fall show.

DETROIT FLORISTS' CLUB.

Wednesday, May 2nd, 1907, was another of those successful evenings which repeat themselves rather frequently with the Detroit Florist Club. The stereopticon lecture on Home Gardens and Backyard Improvements by E. A. Thomas of Dayton, O., was delivered in Harmonie Hall and the general public was invited. Fortunately that crowd of people which is always looking for something free was absent

so that the very appreciative audience was composed of that class which will carry out the suggestions offered during this lecture.

All who were at the last S. A. F. convention know about this lecture, still it seems to remain for the Detroit Club to carry the laurel of disseminating the vast amount of knowledge contained in that lecture to the general public.

The same opportunity which the Detroit Florist Club had is open to others. It is one of the cheapest and undoubtedly the most effective way of educating the general public and therein lies one of the foundations of the existence of florists' clubs. If we individually or collectively do not do everything in our power to educate the public to the use and love of flowers and plants we do not deserve to affiliate with florists' clubs, nor have clubs who do not look after this line of working reason to exist.

FRANK DANZER.

NEW LONDON HORTICULTURAL SOCIETY.

The New London Horticultural Society held its meeting in Norwich, Ct., on April 29. A practical talk on hybrid roses by President Head and an interesting series of views explained by O. E. Ryther showing how back yards and unsightly places might be beautified by the use of climbing plants, were features of the evening. Among the exhibits were handsome specimens of hybrid tea and climbing roses and Marshall strawberries from the Plant greenhouses, and Bride roses and sweet peas from Mrs. Frank A. Roath.

CLUBS AND SOCIETY NOTES.

The April report of the Home Culture Club of Northampton, Mass., shows a very general and enthusiastic interest in beautifying the homes of that city.

At the first regular meeting of the San Diego (Cal.) Floral Association held on April 19, it was decided to hold a flower show on May 29. The society starts with a membership of over one hundred, and it is thought that five hundred names will be enrolled by the date of the annual meeting, June 10.

The Horticultural Society of Chicago has under consideration an exhibition in September which shall include not only the garden flowers which are then at their best, but vegetables grown under glass and outside. Supt. Warder of Lincoln Park has been appointed chairman of a committee whose object shall be to enlist the substantial support of the owners of large estates.

The Albany Florists' Club, Albany, N. Y., held its first annual banquet at the Hampton on April 29, and the temporary organization formed last summer became a permanent organization with officers elected as follows: Pres., W. C. King; vice-pres., E. F. Meany, F. M. Briare; treas., W. C. Kurth; sec., T. F. Tracy. Thirty-four florists of Albany and vicinity were present. Short addresses were made by Fred A. Danker, Fred Goldring, W. C. Gloechner and others. J. J. Karens of Philadelphia was a visitor.

A Plea for the Picturesque in Landscape Gardening

(A paper read before the Gardener's and Florists' Club of Boston by B. K. Howard.)

(Continued from page 593)

In regard to the different characters shown in different trees: they are classified by Downing under three heads. The round-headed trees like oaks, chestnuts, ash, beech, hickory, elms, and many others; the pyramidal or oblong, Lombardy poplar, cypress, cedars, the spiry-topped such as larch, pine and spruce, with horizontal limbs and straight leading stems. The trees of this latter class are nearly all evergreen, with dark foliage and where many of them are together they make a dark spot in the landscape which is sometimes good if not too isolated. The white pines are the best of this class. Of the oblong group, the Lombardy poplar is the most characteristic. In some parts of the middle west where scarcely any kinds of trees except those of the poplar family will thrive, an occasional group or broken

ever been proven that it does. It seems to me that the beauty of the tree should not be sacrificed at any cost. If a tree is going to die let it, but do not maim and disfigure it for a few added years of crippled existence. If it is considered that a tree has too many limbs to support, it seems to me a much better relief for that would be to cut off such limbs as can best be spared, right down to the trunk of the tree. That will make the contour more irregular and will often add to the picturesque appearance of the tree. Some trees, like horse chestnut, maples and lindens, are too symmetrical for the picturesque plantation and it would often be well to break into them in this way as it would make the contours more interesting from an artistic point of view.

White oaks are very handsome and

almost to the ground, then turn up in graceful curves. The summer foliage is a light and airy green and turns a deep brownish purple in the fall. The lime or linden tree is rather too symmetrical for picturesque planting but makes a fine avenue tree. Beech trees look best in a dense wood of their own kind, and they are quite apt to grow that way, often covering large areas, to the exclusion of all other kinds. The bark is smooth and grey and in a shady grove looks cool and inviting. They often retain a portion of their leaves, though dried and withered, through the winter and when the sunlight strikes them they lend a charming bit of color to the dreary landscape. The hornbeam belongs to the beech family and is a twisted and picturesque tree and makes an interesting edge to a forest. The Lombardy poplars are fine to use in connection with architecture. They are excellent to break the monotony of a high wall or terrace. As they make a strong contrast to the other trees they are good to use to fix the attention to some particular point in the landscape. Horse chestnuts have handsome leaves and beautiful blossoms in the spring, but the tree is so regular in shape and so solid that its other beauties are nearly lost. I have seen them when their regularity had been broken into by judicious trimming and they had quite an improved and interesting appearance. Where they are planted thickly together it changes them into a more loose and better form. Birches are quite airy and graceful and will grow almost anywhere. White birches look best in clumps by themselves. Where they are mixed with other trees the trunks look too chalky and make too much contrast. They need to be silhouetted against something delicate. Yellow birches have a peculiar light golden bark which makes quite an agreeable note in a forest. The alder is very suitable for bordering a stream; not a continuous monotonous hedge but in detached groups. Maples are fine avenue trees, but they are so regular in shape that they are almost as impossible as the horse chestnut for the picturesque plantation. The scarlet maple does well to mix with ash or elms or cedars. The red blossoms in the spring and the brilliant autumn foliage make them very attractive. Chestnuts almost rival oaks in beauty and character and longevity. They fulfil almost the same conditions and are fine in a forest or groups in ornamental plantations or standing singly where a large and beautiful tree is desired. When old sometimes the lower limbs lie flat upon the ground and are wonderfully picturesque. All the hickory family are very handsome. Shellbark and pignut hickories are most paintable on account of their agreeable shape, the fine color and texture of the foliage, and the pleasing variety in light and shade. Shagbarks grow to an immense height and, when confined in a forest, shoot up 50 or 60 feet without branches. Willows are useful for the border of streams or ponds. Not too many of them should be used however, as it makes the effect too fuzzy. The common white and

DELICACY
Group of Birches.

line, not too long, of Lombardy poplars is a welcome variation in an otherwise dead level and monotonous landscape. They are also occasionally fine silhouetted against a high distant hill, as they help to send the hill back into atmosphere. Oaks are suitable for almost any location. They are most ornamental and most expressive of majesty and strength. There is a great depth of shadow and richness, and at the end of the day when they are wind-tossed and the last rays of the sun strike them, they look like trees of gold. It is when they have reached a great age that they are best and have greatest character and beauty.

It is becoming the fashion to cut off the ends of the limbs of great trees, called heading in, I believe. This amputation is supposed to prolong the life of the tree. It may be true that it will but I do not know that it has

the limbs are usually long and twisted and knotted and are said to quite nearly resemble the English royal oak. Nearly all the white oaks I have ever seen have been growing within or on the edge of a forest and they do not usually attain a very great size under those conditions. The white, black, red, and scarlet oaks are the kinds that are most common around New England and they make the greatest of ornaments to the landscape. The American elm and English elm are both fine trees for shade and ornament and the American elm is especially good for avenues. The plane or buttonwood tree is best when planted singly or in small detached groups. It has fine light foliage and irregular and picturesque shape. The best trees of this kind that I have ever seen are at Pine Bank. The American white ash has a fine appearance especially when old, when the lower limbs droop

Russel willows are best; it is quite a common thing to cut them off about 6 or 8 feet above the ground, then let the quickly formed new limbs spread in every direction. I think this effect is quite fine. In a row or group the trunks will always grow in many directions and they are varied and interesting and picturesque. I do not care for weeping willows. Sassafras trees as they grow along the Connecticut and Rhode Island shores, are about the most picturesque and decorative trees that I know of, unless perhaps an occasional old red cedar that has been blown and twisted by the winds. The trees that I have seen in Connecticut have gracefully curved trunks, a solid mass of foliage, and finely decorative contours. I should think they would be excellent to use in a formal garden in the place of cypress. The tupelo is a little allied to the sassafras in the appearance of the thick mass of foliage and twisted trunk. They grow in a very symmetrical form when standing alone

ledge location. Red cedars are rather stiff and formal when young, but when they get old and some of the limbs get broken and others twisted about by the winds they are very Japanese and paintable. The late afternoon sun shining on them produces an effect of unusual richness of color and in the moonlight they are still beautiful silhouetted against the night sky. The more rocky a place is the better they seem to like it, and often they fasten themselves to a ledge where there scarcely seems to be any soil.

In Gilpen's book on landscape architecture he describes a very charming layout, in which he lays much stress upon the beauty of the architectural foreground. The house he speaks of stands on the brink of a chalky cliff and commands a rich middle distance of park scenery with an extensive view of the sea beyond. By adding a foreground of low shrubbery or groups of blossoming plants or by framing the picture with rightly placed trees a striking and beautiful composition

of existing conditions from important points of view and of important views. Then in the sketches make such changes as will improve the compositions, then make the changes in nature. The edges of plantations or forests are the parts that require a great deal of skill and attention. If you get the edges finely adjusted in every way the rest of it will take care of itself. He recommends planting roses, paeonies, hollyhocks, to soften the edges and leaving the grass long also helps. A good suggestion for laying out a scheme for planting is to lay down evergreen branches on the ground and view from various points and arrange until you have a good shaped bed and which composes well with things around it, then mark it and plant. Large branches stuck in the ground are good for getting tree locations.

Hide the drives and walks as much as possible, only allowing them rarely to appear, just to give variety in light and shade. I do not mean to hide them with high shrubbery; low shrubbery will do pretty well and will not cut off the view from the road. Use such shrubs as have a color and interesting appearance in winter as well as summer. In estates where cattle, deer, or sheep are allowed to graze on part of the grounds, the part near the house or the more ornamental part with the shrubs and flowers, has to be separated by some kind of artificial barrier from where the cattle are. That which is most in favor is a woven wire fence with galvanized iron posts all of which is quite inconspicuous and can not be seen at all from a little distance. A low wall can be made very attractive or the common stone wall or stone fence as seen in New England pastures, when built over undulating ground and allowed to twist about and over the ridges and vine clad in places and broken with clumps of blackberry, huckleberry, sumac, and barberry and an occasional tree or group. Trees and shrubbery should be planted in irregular figures, which, as the sun moves around, gives constant variety of light and shade and form and color. In regard to paths, they should wander about where the pleasant prospects are; that is, those that are for promenade. The ones that are for utility should go fairly direct so as to serve that purpose. A walk should at least be wide enough so that three people can walk abreast. Six feet is about as narrow as it is practicable to make them. If a path should go along a river or around a pond, if the nature of the ground permits, it should approach near the edge only at intervals, but where beautiful scenes can be viewed there the walk should go. Do not smooth off the surface of the ground too much. The wrinkles and humps and hollows in old mother earth are interesting and full of character and should be recognized as a good fortune rather than things to be gotten rid of.

Suggestions for the Wild Garden.

The term wild garden is applied to the placing of perfectly hardy plants where they will become established and take care of themselves. The way planting is usually done, is to stick out a lot of subtropical plants in beds which bloom brilliantly through one season and with the first frost they are killed and have to be dug up and the

UNCONVENTIONALLY DECORATIVE

Group of Sassafras.

but the foliage is so beautiful that they are attractive in spite of their regularity. They turn the most brilliant color of anything in nature in autumn and are fine to plant on the borders of an oak, hickory, or chestnut forest for the fine autumnal effect. White, yellow, and pitch pines, and red cedars are the only evergreen trees that I have seen that I care for. Spruce and hemlock look too much like toy trees and only look good when they have been decorated by a snow storm. White pines are rapid growers and when planted in groups rise with straight shafts and send out graceful, tufted, horizontal branches every few feet at irregular intervals and make fine decorative trees. The foliage of the pitch pine is a somewhat yellower green and the trees in these parts do not grow very large but are of interesting shape. They generally grow on poor sandy soil or a

is produced. The strong contrast of trees in the foreground or of a parapet with its decided form of light and shade would greatly increase the aerial softness and mystery of the distance.

A word in support of the necessity of a terrace. In many instances where the ground has a continuous slope and the whole scene seems to be sliding away (from the point of view of a picture) and the eye runs away from the important objects, the terrace would make a level line which interrupts the slope and gives balance. A clump of trees would also have the same effect. A terrace lends dignity to a house. Gilpen recommends planting a few Lombardy poplars near the buildings which makes a number of vertical lines to balance the many horizontal lines in most houses. This gives stability to the composition. In going to work to change a layout or to make a planting scheme, make a sketch

same thing repeated year after year, at an enormous expense and a mighty poor result as seen in the public garden of Boston and nearly every other city. To most people a pretty plant in a free state is more attractive than any garden denizen. It is taking care of itself and moreover it is usually surrounded by things consistent with its wild state. Among the many reasons for advocating this system are the following: 1st "because hundreds of hardy flowers will thrive much better in a wild rugged place than they ever did in the old fashioned border."

2nd. "They will look infinitely better than they ever did in the border owing to the more varied and interesting surroundings and contrasts."

3rd. "No disagreeable effects result from decay for as soon as one plant is out of bloom it merely passes out of notice among the other shrubs and is succeeded by other blossoms."

4th. "Because it enables us to grow plants that have no place in the trim garden, but growing in large masses in a field would be very beautiful."

5th. "The early spring can be made alive with blossoms."

6th. "The great merit of permanence belongs to this delightful phase of gardening. If a place is planted with good taste and judgment in the first place time will only add to its beauty." The borders of shrubbery, which usually make a hard monotonous line, could be planted with irregular groups of these hardy plants and make better connections and a source of no care or trouble. Let the grass grow and wave with the wind and let the blossoms fill it with spots of color. Wild and semiwild places are suitable for the wild garden and almost any part of a public park not used for a playground can be made much more interesting than they usually are by adding more color and variety. Great care must be taken to plant these flowers in natural

groups and the only way to learn that is to observe if possible the way these same flowers locate and arrange themselves in the wild state. After they are once rightly established they will arrange themselves in ways that will leave nothing to be desired. "People seldom remember that 'the art itself is nature' and foolish old laws laid down by landscape gardeners are yet fertile in perpetuating the notion that a garden is a work of art and therefore we must not attempt in it to imitate nature." The digging of shrubbery borders gives a very ugly appearance to a garden or park. It is perhaps necessary for a year or two in order to give the shrubs a good start, but after that they should be planted to flowers that will best grow in such a place and then let them alone. Of course all the labor required to produce this miserable effect of dug up borders is worse than thrown away as the shrubs would be better if left alone and by utilizing the power thus wasted, we might highly beautify the places that are now so ugly. Don't rip out the leaves. They decay and help to nourish the plants and trees. Of course in a public park there is a likelihood of fires being started among the leaves, but in a private estate where trespassers are not allowed there is no need of raking up the leaves. They protect the grass and when the snow is off they make the winter appearance of the grounds less monotonous. In the immediate vicinity of the house where they are apt to be trodden into rubbish it may be necessary to rake them up. It is my opinion that the fault is more with the planting than with the leaves if they look at all incongruous, for in a beautiful, paintable, natural place the fallen leaves are beautifiers of the ground. "It is now generally conceded that shrubs thrive better in beds where the surface is never disturbed than where it is annually loosened by digging." The kind of knowledge one needs in order to form a beautiful garden or park is very uncommon. No man can do so with few materials. It is necessary to have some knowledge of the enormous wealth of beauty which the world contains for the adornment of gardens. He must know his materials as a painter knows his pallet and use it as freely to arrange things of beauty and life. An old name for a garden is a pleasure, a paradise, a place of delight, and as in the days of Bacon, so to-day gardening remains to us the purest of human pleasures. The garden worthy of its name is ever beautiful, of fruits for service and of flowers for sacrifice. In the morning it is all freshness and perfume; at noon it is brilliant with color; while at eve it becomes a temple for meditation and for rest. The richest fruits and the fairest flowers are born there and crowned heads, wearied with luxury, have found peaceful rest among shady trees and simple flow. If we wish to describe a fertile land we say it is like a garden; and the gardener's art is almost magical, since it can make the bare rock or a sandy desert even, to blossom as the rose. A good garden is a continual delight, a paradise of fruits from many lands. Every shady tree is a tabernacle wherein matins and vespers are sung by birds while the incense from many flowers is borne on every breeze.

Seed Trade

The quality of weather remains as bad as during the past three or four weeks, though there was a fair rainfall the early part of the week, which was much needed. The grass is becoming green rapidly and the promise of spring is not, after all, a joke, as was recently remarked. From all reports gentle spring is exceedingly coy in the West, but the season is still young, and there is time for good crops, if there are no setbacks after planting.

The latest estimate of damage to the prospective onion seed crop in California places the number of acres totally destroyed at something over one thousand, and a crop of from thirty to fifty per cent. from what is left. It is said that one of the principal growers expects some surplus of the yellow varieties, but as he had booked no "futures" according to reports, if he has any seed at all, it would be surplus. A letter from another grower, and a conservative one, states that in his opinion onion seed will be worth from \$2.00 to \$3.00 per lb. next fall. In a few weeks we shall be able to give a reasonably accurate statement of the real conditions.

Notwithstanding reports of serious damage to early vegetables in the South, the demand for seed for replanting has not been heavy, indicating either that damage reports are exaggerated or else it is considered too late to replant such crops as are intended for shipments to northern markets; possibly a combination of both.

Weather from the latitude of New York City north has been too cold for the planting of tender vegetables, or if planted, germination will be slow or very unsatisfactory, and of course in many instances the seeds will be at fault. Such seasons as this always add to the seedsmen's woes, but it is the portion of the trade to endure this as an inevitable part of the business.

Reports from Washington state that B. F. Brown has lost the contract for putting up the seeds for the next government distribution. Possibly the experience of the Department of Agriculture when it awarded the contract to an irresponsible bidder from Dunkirk, N. Y., two or three years ago, has been forgotten. It has been fully demonstrated that the work cannot be done by hand within the time required. Even if a hand machine is used for filling the packets, the pasting must all be done by hand. However, there is no wish to prejudge the case, and seedsmen can view any delay in getting out the seeds with perfect equanimity.

Pea-packing companies of Manitowoc, Wis., have opened the season, and the Landreth Company started planting with a crew of one hundred teams and several hundred employees. The season has been delayed at least three weeks, and the industry will probably suffer considerable loss as a result, though there is now a good prospect for a successful season. There are in and about Manitowoc

eight canning plants, and the output is a large share of the total in the United States.

Fredonia, April 30.—Elton A. Cole and Herman J. Westwood of Fredonia have been awarded the contract for the packing and distribution of the 36,000,000 packages of seeds required for next year's "free seed" distribution. The contract was given these Fredonia men last week in Washington in competition with the Brown Bag Filling Machine Company of Fitchburg, Mass., and other seedmen and contractors. The price at which the job is taken is \$1.18 1-2 a thousand packages, the seeds to be furnished, and all work being done under the direction of the government Department of Agriculture in Washington. The gross amount of the bid is nearly \$43,000.

The Brown Bag Filling Machine Company has had this contract for several years. Four years ago James L. Drohen of Dunkirk secured the contract, and started to do it with a machine of his own invention. He was stopped by an injunction by the Fitchburg people, who claimed his machine to be an infringement on patents they controlled. H. J. Westwood, the present principal in the bidding, was Drohen's attorney. He fought the case to a finish, securing a very small measure of damage for his client. His present associate, Elton A. Cole, is the owner of the Fredonia Manufacturing Company, and a prosperous business man.—New York Times.

NEWS NOTES.

E. F. Priester has started in the nursery business at Sault Ste. Marie, Mich.

The Detroit Park Commissioner is making extensive beds of the old favorite, *Primula auricula*, in some of the most prominent city parks.

The improvements contemplated and in progress upon the adjoining grounds of S. W. Winslow and H. F. Winslow at North Beverly, Mass., require the services of competent gardeners. Peter Scott is at work in that capacity for the former and Peter McCurrach for the latter. H. F. Winslow will add a rose house to be built by Kelliher & Calder this season.

Equipment and Organization of a Modern Horticultural Establishment

Paper Read by J. Otto Thilow, Before the Florist Club of Philadelphia.

The consideration of this subject lends more interest when we compare the aggressive modern establishments of the present time with those of thirty or more years ago. Then, in the absence of the enticing catalog and the undreamed of trade papers, the growers' chief aim was to have a full supply of salable plants in bloom at the opening of the spring season.

The stock consisted of all the then known varieties of every species of bedding, basket and ornamental plants. The florist's market was any point that he could reach. The beast which showed the greatest amount of endurance was nitched to the market wagon, and the assistant or son, daughter, or even the wife was assigned to the task of visiting the neighboring towns with a load of plants in bloom. This method ended with the spring months, and the leftover stock was either advertised at bargain prices in the local papers, or thrown away, as surplus.

The growers who were adjacent to cities, were represented in the markets, occupying one or more stalls with the most attractive stock. At the close of the season the general routine of work followed, that of planting out and caring for the stock plants and blooming stuff for the following winter months. The equipment of these establishments was varied, as a greater variety of plants could be found in the collections of the florists of those days than now. The organization was modest, yet complete, as the florist and his family constituted the faculty, with extra help if needed. The duty of each was to understand the general routine of work from the office to the stoke-hole, the system requiring every one to work for the one aim, that every available corner be filled with attractive stock and in bloom for the spring season.

The florist of the early and even the present day, has always found the wife an important factor in the organization, her judgment and ever untiring interest is indispensable, she has been the helpmeet and always will be as long as her interest in horticulture continues; woman's influence contributes almost altogether to the remarkable demand of the present day. Due credit is not given her for what she has accomplished; she is to-day pre-eminent back of the counter in florist shop, and deeply interested in the work of the greenhouse establishment. Woman was the first to give us a treatise in horticulture in this country; this honor fell upon Mrs. Logan, a florist of Charleston, S. C. This she did at the age of seventy years, in the year 1772.

In referring to the horticultural establishments of the early days, I would not pretend to say that they were not active and lucrative for the growers. Many of the veteran florists were known to you, some of them living to-day who enjoyed their years of toil with good prices for their product. There are establishments existing to-day with modern methods, which pursued the routine above men-

tioned, but keeping pace with the changes demanded by the advance in commercial horticulture, they have branched out as specialists and are classed and known as such in the trade.

It has been noticeable that certain stocks were best suited to certain localities, and to these the growers concentrated their efforts to the greatest improvements of such stock. This method has met with general success, inducing constant extension and enlargement of facilities, demanding modern construction, heating, ventilating, simple and economical methods of handling and shipping. This condition seems to have asserted itself within the last twenty years, and has advanced the interest and the growth of the business in general, in that the growers depend on each other for special stocks, hence the florist of the present time is retail in general stock, and wholesale in special stock.

Their dealings have become reciprocal, the trade papers have entered upon the field, and all seem to be doing a thriving business, and through this medium the enterprising florists know more of each other and the skill of those in special lines. From my own limited observations, I can say but little of other large and aggressive horticultural establishments except the one with which I have been connected for the past quarter century, an establishment which is keeping pace with the increasing demand, largely through their own catalog and the influence of horticultural magazines and rural home publications which are creating an intense taste among the plant and flower-loving people of our country. And what is true of the department offering the subjects for this paper, is true of other aggressive establishments of this country—that organization must be commensurate with modern equipment; so with your suffrage I beg to point with pardonable pride to the plant department of Henry A. Dreer, Inc., at Riverton, N. J., under the able management of J. D. Eisele, the vice-president of the company. I therefore make bold to ask, with the advance and increase in each branch of this department, may we not modestly assume it to be among the modern establishments in equipment and organization?

The trend in recent years has been very decided in the attention given to perennials and many works have been published, treating entirely on the old-fashioned or hardy garden. The amateurs seem to enter into this line with new zeal year after year, so that this department has grown to the enormous extent of 2000 varieties, requiring forty acres to perpetuate the stock. The interest in aquatics is a development of the past twelve years, and has extended from this country to Europe. Fully six acres are now devoted to this branch and many of the best introductions of recent years are of American origin. Twenty years ago it was considered a bold plunge to devote one house, 12x100, to ferns. Since 1898 over one acre is given to these, and fully a quarter million are

in readiness for immediate market, and one and a half million are handled every season.

Palms are the leading decorative plant. From the owner of the conservatory to the occupant of a flat embellished by a fire escape, the palm has a place, and is essential in the collection of plants for home adornment. These alone occupy four acres of glass. Seeds of the important varieties are imported from their native haunts, the most prominent being the kentia. These are now in batches of from 75 to 100 bushels at one time. Other varieties are used in proportion. The palm industry with that of the fern, is practically a development of the past twenty years.

The dahlia which was somewhat obsolete for a number of years, has been resurrected, and many new varieties and new types have been introduced. Ten years ago less than 6,000 constituted the stock, 75,000 in 1904, and now the enormous number of 300,000 is necessary to meet the demand, requiring 50 acres for maintaining the stock. The demand for the ever popular azalea is still on the increase, ranging from 150 plants imported in 1876 to the present requirement of 60,000. Roses for outdoor planting are among the very important of spring stock, and have made the most marked increase of from 6,000 eight years ago, to 200,000 the present requirement.

Enumerating the above is only to show the advancement made in commercial horticulture along the line of specialties, much other of the varied stock is grown in proportion to the demand. To harbor and maintain an equipment of such magnitude, extensive glass and open area is necessary, besides many accessories with which to carry it through from season to season, viz.: a glass area of from seven to eight acres of modern construction in greater part. Boiler capacity of 850 H. P., which consume 3,000 tons of coal per annum. Water capacity for all used, 300,000 gallons per day. A fumigating house of special construction as required by the State laws, for hydro cyanic-acid gas, for safeguarding against even an incipient presence of scale. A complete machine shop, operated by steam power, for repairing and constructing, and supplied with saw-table for cutting lumber to required sizes for cases and crates for shipments, also a carpenter shop in constant operation. A cold storage area for storing stock for winter and early spring shipment to southern points. Experimental grounds for the thorough testing of new varieties of plants of foreign and home production. A supply department which is under control of one who knows the value of preventing waste. All supplies, from office stationery, tools for machine shop, and every utensil needed in, under glass and open ground, to the most minute item, are guarded with vigilant exactness, replenished before exhausted, and distributed only as needed and upon orders, the working force of this establishment being 150 men, among whom are twenty order clerks, and

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

	Per doz.	100	1000
Alblon (Tall). A variety which originated with us several years since and which is now offered for the first time. Strong grower, pure white with faint aniline red eye.....	\$1.50	\$10.00	\$90.00

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

thirty-five packers. A horticultural establishment thus equipped requires systematic organization to cope with the ever increasing demand of the eager plant-loving public, and, as the pressure and bulk of the business is confined to the short period of spring operations, the strain is severe upon those on whom the responsibility falls. The force must be divided and assigned to the various branches, the heads of each force to assume the responsibility for the accomplishment of such work to which he is delegated. The staff must be headed by a manager, vigilant and capable, assisted by an office force of skilled horticulturists who take up the details and carry them to completion, answering all inquiries of the departments to which they belong. He must be able to answer inquiries on all subjects in horticulture, and give information leading to same; advise the inexperienced regarding plants. He must be a fund of information, one on whom the enthusiastic amateur can and does draw freely. He must be in constant touch with his trustworthy and capable heads of each department, who with him formulate plans for the seasons ahead, anticipating the demands which catalog and other advertising mediums might inspire.

The propagator, a dependable personage, must be capable, one with good judgment in regulating the stock quantities by general conditions and species. Only by close application and years of practice and study, does he become familiar with the wide range of plant conditions and the care of same, observing through all his work that careful labeling is imperative. He is to propagate in such quantities as the manager may direct.

The packing department is an important one. While the order clerks may do their work carefully and to all appearances completely, yet the packer must again check up before he finally packs for shipping. He must use judgment as to the duration of transit and pack accordingly, to guard against weather conditions at destination and in transit, to pack consistently light to save heavy transportation charges. After he is through he

passes the case or cases over to the shipping department, after making a record, marking date and time of his release of said packages.

The shipping department must be under the supervision of one who knows how, when, and where to ship, 1st by the most expeditious and cheapest route; 2d, at a time when safe against severe weather; 3d, to a point most accessible to the consignee. He is to be provided with the latest shipping guides, and be in close touch with carrying companies so as to keep himself informed of the most expeditious routes. Thus it requires one of keen scrutiny regarding shipping rules and conditions, so that the perishable stock he delivers is promptly and safely transported to destination, carefully marked and certificate of inspection of State Entomologist attached. The modern horticultural establishment should have a corps of travelers, who have a knowledge of the stock besides their catalog information. They must anticipate the wants of their patrons, knowing the special line of each one. They should be practical plantmen, and in all their transactions advance the integrity of their house.

The catalog of the modern horticultural establishment is now an indispensable medium, finding its way into the remote corners of the globe. It is the feature on which the mail trade depends as well as that of the customers who are within reach. This medium must be new every year and full of information in order to appeal to the prospective buyer. Since the half toning process from photography gives such real reproductions, the plant catalog, like the magazine, becomes a household pleasure and must be in the hands of the patrons early enough to be consulted before the close of winter when open air work is being eagerly anticipated. The work of compiling this volume must be in the hands of one who has practical experience in all departments, as information given through a reliable catalog is taken as authentic. It has become as much of an educator as the horticultural magazines, and must therefore be resplendent with new

matter and illustrations. As photography enters largely in its compilation, a fully equipped department must be provided to observe every opportunity through the seasons for the reproduction of new features. The one having all catalog matter in charge should also provide the advertising matter fresh and varied for the trade papers and other mediums.

I have touched only superficially on the subject of equipment and organization, and have only cited that of the plant producing industry. A large, if not the greater part of those engaged in commercial horticulture are interested in the cut flower growing. Near the busy marts of this country and of Europe are to be found extensive glass structures which find ready market for their immense product. These, too, are almost entirely given up to specialties, such as are best suited to soil, climate and conditions of their locality, and to these all forces are concentrated. I have visited some of these establishments in the East, and note from the excellent system adopted and the success achieved, that it is entirely through proper organization and up-to-date equipment. The structures are modern in every detail. The force is divided into sections and to each of these is allotted the care of a block; the cutting, packing and shipping is in care of experts who through long experience have learned to confine their efforts to types and varieties susceptible to the greatest improvement under intense cultivation. It is true, also, that the quality of the produce from improved varieties has greatly increased the demand and engendered a wider taste.

Proper organization is essential to the economical and successful operation of a modern horticultural establishment, more especially that it does not and should not increase the detail of labor of the management, but be divided among the various heads of departments in whom confidence should be reposed.

Crops and trees in Barry County, Mo., were seriously damaged by a heavy hail storm on May 6.

NEWS NOTES.

Clarence Smart, 6321 Cottage Grove avenue, is a late accession to Chicago's retail florists.

Ratliffe & Tanner, Inc., will open a retail florist establishment on West Broad street, Richmond, Va., about July first.

The land occupied for forty-one years by John Myers, florist, Broadway and 89th street, New York, has been taken by the Astor estate for building purposes.

Burgevin Bros., Kingston, N. Y., are sending out a colored postal card, showing a view of the handsome new Burgevin Building in which their city store is located.

The application of Reed & Keller of New York for a patent on a device for holding cycas leaves, in floral work, has been allowed under date of April 29. It is a very practical little thing which the retail florist will find very useful.

Franklinville needs a florist, and a greenhouse here would be well supported. Several agents do a thriving business in selling cut flowers, and merchants have a large sale of plants. Olean, Buffalo and East Aurora supply this village at present.—Buffalo, N. Y., Times.

The annual meeting of the stockholders of the New York Flower Exchange was held on May 4, at the market, 26th street and 6th avenue. George Golsner, George Matthews, A. S. Burns, Phil Einsmann and John Schneider were elected directors of the corporation for three years. The distribution of a surplus of \$9000 which has been accumulating was a topic of discussion and its disposition was left to the directors, the general sentiment being that it should be divided among the shareholders. At the subsequent directors' meeting officers were elected as follows: president, John Schneider; vice-president, George Matthews; treasurer, Charles Beckman; secretary, Victor Dorval, Jr.

Arrangements are being made at St. Catherine's, Ont., for a fruit, flower and vegetable show on a large scale in September. The Government will be asked to make a large grant.

CUT FLOWER MARKET REPORTS

BOSTON

Business this week shows no improvement over that of last week. There has been a steady increase in receipts at the wholesale markets with a decrease in prices all down the list, and it takes a big amount of material to amount to any respectable sized bill. Prices are exceptionally low for this season of the year. Roses remain stationary except in quality; they are weakening in size. Carnations are very much in overstock, and the market is decidedly weak on all grades and colors, especially white. Lily of the valley finds a very feeble sale. Daffodils from outdoors are now in full tilt. Sweet peas sell readily. Violets will close out this week and go into seclusion until next fall, by which time we shall all have learned many things of which we are now in ignorance, blissful or otherwise.

BUFFALO

A good volume of business was had during the past week. Trade was good on various lines and stock not too plentiful. Roses of ordinary quality accumulated fast, but cleaned out fairly well at the end of the week. Carnations are good in quality and prices holding steady. The cool weather has held the violet on for a few days longer and the quality is not bad. Peas have been coming in more plentiful and selling readily. A good demand has been had in daisies, swainsona, etc.; smilax and other greens more plentiful; outdoor stock is not yet plentiful.

COLUMBUS

Cut-flowers are in short supply, and consequently bring especially good rates for this season of the

year at both wholesale and retail. Roses and carnations make the market. There are still some violets, also sweet peas, and lily of the valley; bulb stock is gone, and it will be some time from present appearances before any outdoor stock will be ready. Trade continues steady, and at good prices; this can also be said of the seedsmen and nurserymen, for while the weather forbids anything like a rush, still so many months of steady business means a fine total when the season finally does end.

DETROIT

Business has been heavier than the supply. While the dark, cold, weather of the last couple of weeks is reducing stock to some extent supply averages very well. The only surplus is daffodils.

INDIANAPOLIS

Cool weather still continues and trade has been comparatively good, particularly counter trade and funeral work. There is quite a shortage of carnations with poor prospects for a large supply for some time yet. Roses of all kinds are fairly plentiful with quality excellent. Sweet peas are quite abundant now and find good sale. Snapdragon, marguerites, pansies, ten week stocks are sold on sight. A general scarcity in variety of spring flowers seems to prevail. Planting season is still delayed on account of cool weather. The outlook for flowers for Memorial Day is gloomy. Green goods of all kinds are in demand and good ferns are scarce. Smilax is very short in supply and high in price.

NEW YORK

A very dull market on all lines is the story of the past week in and about the wholesale district as well as throughout the retail establishments. Quality is high on all items; roses have never been finer and this applies to every variety offered. One thing on the list that seems to be in short supply is white carnations; these bring extra prices and are snapped up quickly. Yellow daffodils, lilies, lily of the valley and gardenias are on the over-abundant list. Gardenias are seen in almost as many grades as American Beauty roses and at variant prices, with stems from two or three feet down to two or three inches. Among the usually less common things which are at present in abundance may be mentioned Queen Alexandra daisies, yellow, purple, and white centaureas and antirrhinums; the latter has been seen in glorious colors and unprecedented luxuriance of growth. There are still a good many violets around.

PHILADELPHIA

Market very fair for the season. Outdoor lilac, peach, dogwood and Japanese cherry sprays have made their appearance and are a welcome addition to regular subjects. Snapdragon is offered in various colors, but a soft self pink one seems to have the call. The snapdragon crop is bringing excellent price considering cost of production. American Beauty roses are plentiful and good, with fair demand. Liberty and Richmond are in excellent shape but are draggy. Bride, Bridesmaid, Kaiserin and Killarney are still good and

The florists of Portland, Me., met at Mrs. Lizzie Dennett's on April 29 and formed a permanent organization with officers as follows: President, L. C. HANGING BASKETS

State Quantity wanted and will be pleased to quote prices.

W. E. HIELSCHER

Wire Works
40 Broadway, DETROIT, MICH.

CUT FLOWER MARKET REPORTS.

(Continued from page 633).

go fairly well. A limited supply of Chateau, Wellesley and Kate Moulton is in evidence. Carnations are more plentiful but the market is healthy enough to absorb the cut at satisfactory prices. Sweet peas are still plentiful and good, and bring good figures considering the season. The lily of the valley market is rather sluggish, but the product is gilt-edged. Some very good double violets are well received and a surprise for so late. In orchids Cattleya Mossiae has the call. There are a few oncidiums and dendrobiums, but not enough to cut much figure. Green market about as last reported.

ST. PAUL AND MINNEAPOLIS

Trade the past week was very quiet. Rain and heavy snowstorms kept the buyers at home and increased the accumulation of stock materially. Roses dropped \$1 and \$2 per 100 on some varieties. Carnations have maintained the prices nicely. Planting of nursery stock has been carried on quite extensively, the few days the weather would permit.

WASHINGTON

The unprecedented damp, cool weather of the past week still continues. Outside vegetation is practically at a standstill, and, in consequence, the shrubbery that has braved the clouds and blossomed, sells readily and at good prices. Carnations are still scarce, and prices stiff. All greens are scarce, particularly asparagus and smilax. Sweet peas are of unusually good quality, owing to the cool weather, and sell readily. A particularly fine line of hydrangeas are shown and sell at good prices. Geraniums are in abundance, but move slowly; buying for outdoor planting being very backward.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wideawake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Single man as assistant rose grower on commercial place. Steady position to good man. Give reference from last place and state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—An experienced rose grower for commercial place near Boston. Address D. J. W., care of HORTICULTURE.

WANTED—A section man for Roses. Address L. B. Coddington, Murray Hill, N. J.

SITUATIONS WANTED

WANTED

POSITION AS SUPERINTENDENT AND GARDENER on private estate. English. Life experience in all branches of the profession. American and European references of the highest order. Married, no children.

E. DAY (Care C. Bond)

222 St. Mark's Square

PHILADELPHIA

SITUATION WANTED—American, 33 years of age; can qualify in various branches of horticulture; can take full charge of commercial establishment, where first class or fancy stuff is grown. Experienced in making up, buy or selling, also hybridizing and experimental work. Strictly sober, well recommended. Address E. A., care HORTICULTURE.

SITUATION WANTED—American, 23 years of age; has qualified in various branches of horticulture; can take full charge of greenhouses where general stock is grown, and grounds, etc. Specialist in water-lilies, botanical and native plants. Understands herbarium work, etc. With recommendations. Address H. P., care HORTICULTURE.

We can with pleasure recommend the services of a skilled gardener and orchid grower to any lady or gentleman requiring the services of such a man. Apply Carrillo & Baldwin, Secaucus, N. J.

H AND O

LET'S GET DOWN TO FACTS

Are you looking for trouble? If you are, you want an all-cypress house, with its heavy wooden plate, nailed-on sash bars and wood posts, for they are sure to rot out in short order. This cut shows how our kind of house looks, with its steel plate, sash bar bracket and steel post. There's only one thing for an up-to-date, careful buyer to do, and that is, get in touch at once with us, so we can explain all the points of our house of endurance.

HITCHINGS AND CO.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

A LITTLE ADDITION TO YOUR INFORMATION

on paint might save you a good bit of money. For instance: Suppose you used a lead this spring that was not only whiter than any other but took up two to three gallons more oil to every 100 lbs. It's plain to see, that lead will go just that much farther—that's our kind of lead—it's the only kind we use or sell.

It's the lead that makes the "Stay Put Paint" which is told about in our "Stay Put" booklet. Send for it

LORD & BURNHAM CO.
Greenhouse Designers and Manufacturers

1133 BROADWAY, cor. 26th Street, N. Y.

BOSTON Branch: 819 Tremont Building

PHILADELPHIA Branch: 1235 Filbert St.

IT'S a strong combination, that of uniting the rafter and the sash bar in one—a combination that has done more to revolutionize

greenhouse building than anything that has happened since the introduction of the iron frame. U-Bar greenhouses are the best greenhouses built because it's the only construction combining sash bar and rafter—that actually strengthens the house, while decreasing the shade. There's no house as productive. Send for catalog.

Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses, Metropolitan Bldg., 4th Ave. and 23rd St., New York.

Galvanized steel U-Bar. Every two feet it is screwed to core.

Cypress core which is chemically treated against decay.

The roof bar-rafter-U-Bar complete. This is half size.

FUNKIA

Variegated Day Lily, Strong pips, \$1.50
per 100, \$10.00 per 1000. Clumps from 8
to 12 pips, \$25.00 per 100. Cash please.

Charles Hornecker, Box 31, Springfield, N. J.

LILIUM AURATUM

6 to 8 inches, \$4.00 per 100.

9 to 11 inches, \$5.00 per 100.

CINNAMON ROOTS.....\$1.00 per 100.

HYACINTHUS CANDICANS, large bulbs,
\$1.00 per 100.

ZEPHYRANTHES.....yellow, \$1.00 per 100

Six Cases

L. LONGIFLORUM MULTIFLORUM

6—8-inch, from Cold Storage

In good condition, \$3.50 per 100; \$30.00 per 1000.

The entire stock of

DAHLIAS..... for Cut Flowers, owned by
.....Mrs. Laufer, of Creedmoor.

Some 20,000 full sized roots, enough
to plant four acres. Offers for the
entire stock solicited. Not less than
1000 roots to one person.

Ornamental Conifers

(Retinospora, continued from Page 522)

Abies pungens glauca

Retinospora pisifera has many sports. The best are: *p. aurea*, which is identical with the type but yellow colored; *p. aureo variegata*, a shorter growing yellow variegated form; *p. stricta lutescens*, of erect habit and yellowish in color; *p. nana*, a very dwarf, round-growing little plant.

Retinospora plumosa is a different type of *pisifera*, with much finer growth and needles very open. The different forms of it are: *Aurea*, of a nice yellow color; *pl. lutescens* or *argentea*, dwarfer in growth, more compact, broader than it is tall, of a pale yellowish color; *pl. albo-spica*, thickly spotted with white, but when in good growing condition this variety often reverts to the type.

Filifera, another type of *pisifera*, grows to a certain size and makes nice bushy little trees with long cord-like pendulous shoots, good to isolate on the lawn. *R. fil. aurea*, the same, bright yellow-colored; *fil. aureo-variegata*, with yellow variegated shoots; *fil. gracilis* is of dwarf habit, more compact and thinner, more numerous shoots of yellowish color.

Retinospora squarrosa, which is a sport from *pisifera*, has its needles wide open of a bluish color, and is very effective on the lawn, where it needs, like *pisifera*, a sheltered place, being a little tender. *Squarrosa* has to be clipped; it dies out in the centre when of a certain age and looks bare. *Sq. Veitchii*, a thick compact dwarf form, has the foliage more heather-like; *sq. decussata*, the same as type, smaller and more compact; *sq. sulfurea* is of a nice yellowish color in spring while growing; seems to be hardier than the others.

R. Sanderi has very heather-like foliage of blue color; dwarf in habit, round in form; seems to be a sport from *squarrosa*, too.

Abies concolor

Nearly all the forms of *Retinospora pisifera* make good sized trees, good to isolate on the lawn as well as in big beds.

THUYA

The Thuyas are divided into *Thuya*, *Thuyopsis* and *Biota*. *Thuya occidentalis*, the common arbor-vitae, is of pyramidal outline. It does not grow to a big size; it likes to grow near the water, brooks or lakes, where it retains its foliage and freshness much better than in dry soil, especially near the seashore, where the foliage turns yellow, burns and falls off. It is a tree which withstands the severest winter when near the water; in the Adirondacks and in Canada in the swamps at 40 degrees below zero you can see them as green as grass, while here some die at 15 degrees. It is a well-known fact that conifers and evergreens in general bear severe cold when surrounded by dampness, but not by stagnant water.

There are a great many forms of arbor vitae in cultivation; a few of the most distinct are as follows: *Thuya occidentalis*, *compacta pyramidalis*, *fastigiata columnaris* and a few others are narrow, compact, erect growing trees; *Bodmerii* has the shoots flat lycopodium-like; *plicata* has them twisted; both are narrow, erect in growth. *Buchananii* is broadly pyramidal in form with erect cord-like twigs of a grayish-green color. *Pendula* has the branches pendant. *Aurea* G. Peabody, *Cloth of Gold*, var. *Waxen*, *Warcana lutea*, *Ver vaeneana*, *Ellwangerana aurea*, all grow to a good size, pyramidal, more or less compact, and lighter or darker yellow in color. *Alba* *Queen Victoria* and *argentea* *Columbia* take in the fall a creamy-white color at the top of the growing shoots. *Douglasii* and *Spaethii* are two curious forms; the young shoots are long and cord-like, the leaves open only the second year and are

heather-like, the first one pendulous and yellowish-green, the other erect and dark green. *Ellwangeriana* has heather-like foliage which opens the second year, the young shoots short and cord-like; compact in growth. *Wareana*, also called *robusta*, is a coarse, compact, oblong-spherical growing little tree. *Lowii*, *umbraculifera*, *globosa*, *rotunda* and a few others are of spherical compact growth with coarser or finer foliage. *Recurva*, *nana*, *damosa*, *Little Gem*, are dwarf little trees of spreading habit good for rockeries. All these arbor vitae can be used to advantage isolated on small lawns, in beds, formal work and hedges.

Thuja plicata, *gigantea* or *Lobbii* are three different names for the red cedar of the Pacific coast. It is a beautiful tree which grows to a large size but unfortunately is not reliably hardy in our northeastern states. When young it looks like a broad robust-growing arbor vitae, lighter and glossy green in color. *Gracilis*, *aurea* and a few other forms of it are not any hardier.

Am. Ed. Ham.

To be Continued.

Amasonia Punicea

This beautiful winter flowering shrub deserves to be better known as a most useful commercial plant; a worthy rival in its rich coloring to *Poinsettia pulcherrima*. Though mentioned in Loudon's encyclopedia in 1822, it was reintroduced as a new plant from British Guiana in 1886 by Messrs. Veitch, but is by no means common today. The inflorescence is very brilliant, in the form of spreading bracts, of a rich vermilion-crimson; the leaves of bracts are arranged in pairs, longer at the base and graduated along the entire length of the racemes, which when well-grown are from 12 to 18 inches in length. The bract is the main feature of the plant and lasts fully two months in perfection; the tubular flowers are borne at the base of each pair of bract leaves, and are of a creamy white color and offer a pleasing contrast to the other parts of inflorescence. Though the flowers do not last long the bracts remain splendid for cut-flower arrangements, showing up brilliantly by artificial light.

The plant is of easy culture when its simple requirements are met. It is a stove plant but has a preference for a cold bottom stage and enjoys plenty of moisture during growth. Unlike the poinsettia, it is not of a deciduous nature, but requires a careful watering and partial rest when flowers are over. First year plants may be grown on into nice specimens the second year, carrying four or five bracts. As compost use turfy loam, leaf mould and a little peat and sand; it does not take kindly to gross feeding, but a little Standen's manure when bracts are developing is helpful; propagate by taking in the spring firm, fresh cuttings which are easily rooted in warm case; grow straight on, without any pinching into nice single-stem plants in 5-inch pots suitable for Christmas flowering. The smart, up-to-date florist will know at sight that if this plant can be successfully grown, it is just the color to meet a large demand for all decorative purposes.

Edgar Elwin

May 2, 1907.

The Elm-Leaf Beetle

As this insect is liable to occur again in alarming numbers this year, a few notes on its life history and the methods of treating it may be timely.

The beetle passes the winter in the adult stage in any place where more or less protection can be had from the inclemencies of the weather, such as out-buildings, sheds, steeples, hollows of trees, and even under sidewalks. If the weather is favorable, they appear during the last of April or the first part of May to feed on the unfolded leaves of the elm. When the foliage is far enough advanced to furnish food for the larvae, egg laying is commenced. Unlike a great many insects, this process continues for several days, a few eggs each day. The larvae appear five or six days after the eggs have been deposited and begin to feed on the under side of the leaves. The work of the larvae can therefore be distinguished from that of the adult beetles by the fact that the latter eat irregular, round holes in the foliage.

The grub is full-grown in from fifteen to twenty-five days, depending on the condition of the weather and the food supply. It then descends toward the ground and pupates in any convenient place, such as hollows of trees and crevices in the bark, and also in large quantities around the trunk of the tree at the base. Last summer in Providence larvae and pupae could be swept up by the quart from the folds of the burlaps which were placed on the trees for the gypsy moth.

A few days are passed in the pupa state, and a second brood of beetles appear from the first to the middle of July, and grubs of these are full-grown the latter part of August. Under favorable conditions a third generation may also appear, but generally the beetles of the second pass the winter.

As yet we have no parasitic insects which seem able to keep the beetles in check. Occasionally weather conditions are responsible for the destruction of a great many of the first brood. Birds also are effective enemies, but in cities where the English sparrow has taken possession, the insectivorous species have been driven out. It is partly for this reason that the insect is much more injurious in the cities and towns than in the woodlands.

The principal remedy is spraying, but because of the great resistance of the beetles to poisons it is necessary to use a kind that can be applied in large quantities without injuring the foliage. Lead arsenate has been found to be the best known remedy and should be applied at the rate of ten pounds to one hundred gallons of water. If the beetles are numerous at the beginning of the year, a spraying should be given just as soon as the leaves have unfolded. If this does not check the insect sufficiently, a second spraying can be given at the time the larvae of the first brood appear. Under most conditions this is the principal spraying of the season. If conditions are exceptionally favorable to the beetle, it may be necessary to make an application to destroy the second brood in August. Sometimes large quantities of the larvae and pupae of the insect can be destroyed by the application of kerosene emulsion or hot water when found on the trunk or around the base of the trees.

Banding the trees with sticky fly-paper or other material is of no use against this insect because the beetles fly actively and do not ascend the trunk in attacking a tree.

—Extension Department R. I. Col. of Agr. & Mech. Arts, Kingston, R. I.

British Horticulture

VISIT OF FRENCH HORTICULTURISTS

On several occasions parties of British horticulturists have paid a visit to the French nurseries. This visit is now to be returned. The Journal of the Federation Nationale des Syndicats Horticoles de France in Paris is making the arrangements amongst its readers for the trip, which promises to be unusually interesting. The visitors will arrive in London at the end of May in time to attend the summer show of the Royal Horticulture Society, in the Temple Gardens. This is the premier show, and the French visitors will have an opportunity of comparing British show methods with those of their country. Britishers who have visited the French shows usually get the impression that the growers in that country cannot excel the British ones as regards cultural skill, but in effective and artistic arrangement the French horticulturists are unbeaten. The trippers will take full advantage of their few days in London to see the chief attractions, such as Kew Gardens, described on the programme as the most beautiful botanical garden in the world, Hampton Court Gardens, Richmond Park, and the other Metropolitan open spaces. The instructive side of sightseeing will not be overlooked. The colony of glass belonging to Messrs. Rochford at Turnford Hall, where quantities of lilies are grown under the retarding method, will be inspected, in addition to the nurseries of Messrs. Rivers at Sawbridgworth, where fruit culture in pots is a specialty. It is also hoped to inspect the orchids of Messrs. Hugh Low & Co., Bush Hill Park, and the many rare plants at Chelsea, belonging to Messrs. Veitch & Sons.

SOIL INOCULATION

Some very interesting experiments in soil inoculation have in recent years been conducted by Professor Bottomley. It is due to scientists of this calibre that horticulturists have the advantage of modern research. If they had depended on the Board of Agriculture for assistance in this field of investigation they would have been sadly disappointed. Our Board is very much behind the American Department in this respect. The British Department, sometime ago, made an experiment with some material obtained from the United States, and this was reported as a disappointing failure. It subsequently transpired that the material had been kept in England for six months before the experiment was made, in spite of the fact that its vitality can only be depended upon for two years. These and other instructive facts were laid before a meeting of the Horticultural Club in London recently. Mr. Cuthbertson spoke of the advantages of soil inoculation for the poor land in Essex, where he resides. Professor Bottomley answered that the experiments made in that county had proved very successful.

FOR SCIENTIFIC RESEARCH

The scope of the Royal Horticultural Society's operations is now extended by the erection of a laboratory at the beautiful gardens at Wisley. This extension will enable the Society to pay an increased attention to scientific research. The subjects to be experimented upon include soil-sterilization by steam as a means of destroying plant pests which live in the soil; an investigation into the influence of sterilization on the plants cultivated in the soil; study of the bacterial flora of the soil; etherization of plants; and certain plant diseases. The usefulness of the Society will be immensely en-

hanced by this experimental work to accompany the trials of flowers, fruit and vegetables which form part of the Wisley work. The Society is now thoroughly equipped for aiding the gardener in solving the doubts and difficulties which arise. It has an excellent Scientific Committee whose deliberations are always of value. The Society's publications are also of incalculable assistance. The "Journal" issued quarterly has in recent years grown in bulk and usefulness. One of the Society's latest publications is an official report of the third international conference on genetics, held in London last year. The papers are admirable contributions to many important problems of plant life, and will be valued by all interested in the scientific side of horticulture.

THE DAY OF THE DAFFODIL

Lately I was able to see the golden array of daffodils on the famous nursery of Messrs. Barr & Sons. The firm have a wide selection of new and old friends and some of these are still costly favorites. Peter Barr, named after the head of the firm, is now catalogued at £21 a bulb. There were several unnamed seedlings to be seen at the nursery, indicating that the "last word" has not been said on this branch of horticulture. Splendid as is Peter Barr, with its bold graceful form, it is hoped to even excel this floral aristocrat. Amongst the leading varieties, King Alfred, a majestic bloom, fit for a monarch's name, retains its wide popularity. Mrs. George Barr is a white Ajax, of smaller dimensions. Eglehearti Royal Star is an imposing bloom, with sulphury wings and a broad flat cup of an orange red tint. The Bride may be regarded as one of the pick of the poeticus section. Others worth noting are P. R. Barr, Duchess of Westminster, Cleopatra, Maggie May, C. H. Curtis, Sabrina, Cloth of Gold, Shakespeare, etc. Ariadne has won many honors on the show table. It belongs to the early-flowering section, and its soft lemon-colored cup in an ivory white perianth usually attracts considerable notice. With this special attention being paid to the daffodil there is little chance of this charming subject losing its hold on the public.

W. H. Aclsett.

Magnolia glauca

(See Frontispiece.)

The beautiful magnolia which is the subject of our frontispiece this week is a native of the southern and middle States where it is found growing luxuriantly along the river banks and brooks. In the south the foliage is more or less evergreen. The northern limit of the tree is at Magnolia, Mass., the name of the town having been given for this reason. The flowers are creamy white and deliciously fragrant. By many, *Magnolia glauca* is considered the most beautiful of our American flowering trees. In flowering time the blooms are sold in enormous quantities by colored women on the streets of Washington and few passers there are who have not the price of a magnolia flower.

At the Arnold Arboretum may be seen a beautiful hybrid of *Magnolia glauca* called *Thompsoniana*. The other parent is *Magnolia tripetala*—the umbrella magnolia. The flowers of *M. Thompsoniana* are like those of *glauca* but three times enlarged. It flowers all through the summer but, unfortunately, it is not quite as hardy as either of its parents.

There never has been and never will be a more fitting time for those who shape the course of the various small bodies, such as florists' clubs and similar organizations, to work towards some practical means for permanent affiliation and intelligent co-operation between these associations and the national society. The manifest weakness of the parent society at the present time is the lack of this backing, and the S. A. F. will never attain its best possibilities until this much-needed support is in evidence. It has been well said that an enlightened patriotism knows no State boundaries. It is for the local organizations to awaken their members to a wider vision and a better realization of the fact that if anything really great and serviceable is to be accomplished the enemy of any one section or interest must be treated as the enemy of all. Let us hear less of the selfish plea of "local interests" and "limited territory" and seriously consider what course we may pursue to bring about a general and common advancement and permanent harmony through the adoption of uniform policies. Enemies and opposers to every wise movement are inevitable, but that need not disturb so long as we make it our business to acquire an intimate knowledge of what our profession needs and all co-operate toward the same great end of providing it.

A reckless policy and its results

In the same days' mail there comes to us from the north the plaint about trees ruined in the Maine orchards and nurseries through the depredations of meadow mice, and from the south the call for better protection of martins and swallows so useful as allies of the farmers in checking the invasions of the cotton weevil and other insect pests which, if unrestrained, would make all agriculture and all horticulture hopelessly impossible. Skunks and hawks and minks, they tell us, are needed to wage war against the destructive mice; orioles, blackbirds and swallows are invaluable in preying upon the ravaging insects. It is full time that people should consider these things. As usual, it takes a series of severe lessons and hard experiences to convince mankind that it is making a costly blunder. It seems very natural to hunt and destroy reptiles and small animals and birds but the day of reckoning comes in due time when Nature's delicate balance is rudely disturbed and that seems to be the cause of the present trouble. It is computed that the meadow mice have done fully half a million dollars' damage to nurseries and orchards in Maine during the past winter and scientists and statisticians are constantly telling us of the stupendous loss to crops throughout the country from insect depredations yet the indiscriminate slaying of the creatures which are our natural protectors against these ravages goes on with but little restraint and we find, further, the men to whom are entrusted the making of our laws often opposing with an inexplicable fanaticism measures for the saving of the forests which furnish shelter for these invaluable auxiliaries of the cultivator of the soil.

Get together In estimating the intrinsic value of last week's far-reaching accomplishment of the S. A. F. on behalf of the commercial florist, we should not undervalue the lesson it teaches of the great power of organization and the immense advantage in having at hand the means for the expression of unity of sentiment and action against the bully wherever and whenever he puts in an appearance.

Press Comments on the Express Rate Decision

An Inviting Opportunity.

The first reduction of rates under the 1906 amendments to the Interstate Commerce law have just been ordered by the Interstate Commerce Commission, on complaint made by the Society of American Florists against the United States Express Company.

If eminent corporation lawyers are so confident that Senator Foraker is right in holding the Rate law unconstitutional, here is an inviting opportunity for a test case, in which Senator Platt's corporation and three railroads can pool their confiscatory grievances.—*N. Y. World, May 7, 1907.*

May Make Test Case.

The first reduction of rates ordered by the Interstate Commerce Commission in the exercise of authority conferred upon that body under the amendments of 1906 to the interstate commerce law, affects both railroad and express companies.

The United States Express Company is Senator Platt's corporation. The railroad corporations interested are very powerful. It is not improbable that the first decision of the commission may be made a test case to determine the constitutionality of the rate regulation law. The first application of the law has apparently hit some of its bitterest enemies in a tender spot.—*Worcester (Mass.) Post, Tuesday, May 7, 1907.*

Work of New Rate Law.

It is a strange and by no means delightful situation which the express companies of the country now face because of the attempted extortion of one of their number. In future they must face the fact, fixed and inexorable, that their charges, like those of the railroads, are subject to review and reduction when necessary by the Interstate Commerce Commission. This is the first tangible evidence of the teeth with which the new rate bill is furnished. The first case of the kind, arising under the new federal rate law, has just been passed upon by the Interstate Commerce Commission with the consequence that Senator Platt's express company is ordered to beat a retreat from a radical advance in rates which it had made last year on cut flowers from New Jersey points to New York city. The advance was so extended, following up a previous marking up of the rate, as to give an impression of unreasonableness on the face of things, and it will be found difficult to quarrel with the commission in reaching the conclusion it does.

It is now up to the express company to obey the orders of the commissioners or appeal to the courts, and in view of the plain weakness of its case it is not likely to do the latter. The one certain thing is that it will not snap its fingers at the commission in the old familiar way of the past decade. It would be too expensive a gratification at \$5,000 a day, while the finger snapping was going on.—*New Britain (Ct.) Herald, Tuesday, May 7, 1907.*

Puncturing Corporate Reasoning.

In the first decision rendered by the Interstate Commerce Commission, affecting an express company rate, Commissioner Lane neatly punctures the fallacy of corporate reasoning. The complaint arose from an increase of 100 per cent. in the rate on cut flowers from New Jersey points to New York City—from 50 cents to \$1 per 100 pounds.

The express company pleaded the necessity for increase on account of the cost of delivery in New York, and attempted to show that it received little enough for the service from the new rate. First, it declared its contracts with the railroads for carriage compelled it to give them from 40 to 45 per cent. of the gross rate; second, its contracts with receiving agents gave them 20 per cent. of the gross rate. Under the new rate the agents got, say, 20 cents and the railroads 45 cents, leaving the company only 35 cents for delivery. No attempt was made to prove that either the agents or the carriers were entitled to such amounts for the service performed, but merely that under contracts existing they received that proportion of any rate imposed.

Commissioner Lane justly holds that by such contracts and such reasoning any rate on any commodity might be made to appear unprofitable. The commission therefore rules that a rate of 60 cents per 100 pounds is reasonable. Allowing agents and carriers the old rate for service the express company will realize from the rate allowed precisely the same amount it would realize from the \$1 rate after doubling the compensation of agents and carriers. The case is significant.—*Pittsburg (Pa.) Dispatch, Monday, May 6, 1907.*

PROF. STORER RESIGNS.

Professor Francis Humphreys Storer, professor of agricultural chemistry, at Harvard, and head of the Bussey Institution since 1871, has resigned, his resignation to take effect Sept. 1. In the thirty-seven years of his professorship Professor Storer has not only done the stated teaching of his position in the lecture-room and laboratory; he has also published a comprehensive and durable treatise on agricultural chemistry, and carried on the general administration of the Bussey Institution, including the care of the library and the editing of the Bulletin. As a teacher he has been helpful and interesting, because of the wideness of his knowledge and his wealth of illustrative material. As an administrator he was diligent and careful, and an especial friend of students whose financial means were small, and whose early opportunities had been limited. He devoted himself without reserve to the Bussey Institution in spite of the fact that the Boston fire of 1872 greatly and permanently reduced its sources of income. At the last meeting of the corporation Professor Storer was appointed professor of agricultural chemistry, emeritus, from Sept. 1.

WHOLESOME CHESTNUTS.

The time is near at hand when florists will find a way of displaying of a considerable portion of stock of various kinds in the filling of window boxes and tubs. Although a great many kinds of plants are suitable for this work, there are again some things that are almost indispensably associated with it. For instance, the variegated vinca which is without an equal either for tubs or window boxes for hanging downward from the edges. Scarlet geraniums in two rows with blue lobelia in front along with the vincas make up a very attractive window box at a moderate cost. Fuchsias which were for a time all but forgotten are being utilized now for this kind of work. Boston ferns are very much at home in window boxes providing they receive proper attention and are placed in a sheltered and somewhat shady situation. Rubber plants answer the purpose equally well under like conditions. *Dracaena indivisa* is a whole decoration in itself when placed in the centre of a moderate sized tub, and more stunning still when a number are planted in a long box along with some other decorative foliage plants, or small flowering plant either. Begonias will do very well.

Hydrangeas are very good for tubs and for larger ones canna's fit in very well. Coleuses are soft and consequently not so enduring as many other things but if bright foliage is desirable they may be used, or *Achyranthes*, which is a little hardier, may be used instead. Crotons, when hardened properly in anticipation of the duty to be performed make up into charming window box decorations.

There may be more than mere talk in the matter of the falling off in popularity of the American Beauty rose, but granting that there is there need be but little fear but that it will come again to its own.

There seems to be no end of new introductions of *Nephrolepis* and perhaps each new comer has points superior to its predecessor, but notwithstanding this the good old *Bostoniensis* is in favor still because of its undoubted qualities as a graceful, substantial, decorative fern, superior in the former quality at least to any that have as yet sprung from it.

Kentias are much sought after this season and the variety *Belmoreana* more than any other. This variety makes a splendid specimen undoubtedly, but for a large hall or reception room a specimen plant of *K. Forsteriana* with its much longer and graceful leaves seems to me to be preferable. *Kentias* are somewhat high in price. I refer of course to the larger sizes.

Memorial Day should count for more than it has so far, especially to the retail florist and grower. Try to make a specialty of something or for that matter boom up a number of things for that day. It is all very patriotic and so on to give a lot of good stuff away for nothing on that day, but it has occurred to some of us that those things would be just as much appreciated if something had been paid for them; at any rate it would greatly hasten the time when Memorial Day would be to the craft something like what other occasions are now and have long been.

NEWS OF THE CLUBS AND SOCIETIES

SOUTHERN CALIFORNIA HORTICULTURAL ASSOCIATION.

The second spring flower show was held on May 1st to May 8th at Morley Rink, Los Angeles. This was the most elaborate show the Horticultural Association of Southern California has ever attempted. It is reported to have been a great success in every way. It was not a competition, but an exhibition of plants and flowers, tropical and sub-tropical, mostly grown in the open.

Howard & Smith had a magnificent collection of tree ferns of various kinds, also shrubbery, and new roses introduced in California for the first time. Edward Rust, nursery man of South Pasadena, also had a fine collection of ferns and shrubbery, and some fine specimens of English box rarely seen in this part of the country. Detrich & Huston also had a fine exhibit of decorative plants. Rising & Dunscombe had a magnificent show of field-grown carnations, also roses. Signal Hill Floral Company had a very fine display of field-grown carnations, coreopsis and other cut blooms known in California as the sea dahlia which is a variety of *Leptosyne maritima*. Thomas Lambert of Sierra Madre had a splendid show of new English sweet peas, some of which were never before displayed in California. Also Miss Reise had an excellent display of sweet peas and new roses. Cacti by Theodore Payne were very good indeed. He also had a table of California wild flowers.

H. E. GEORGE.

NEW BEDFORD HORTICULTURAL SOCIETY.

At the regular monthly meeting of the New Bedford Horticultural Society held on Monday evening, the members listened to an address upon the culture of the dahlia, by N. Allen Lindsey of Marblehead, Mass. Mr. Lindsey congratulated the society upon its strength and vigor, and in the course of his remarks, pleased his New Bedford hearers when he said that nothing in the horticultural world enjoyed so wide a popularity as the dahlia. The speaker regretted that several kinds which were popular as far back as 1840 have entirely disappeared. He describes the dahlia as being very capricious; as sometimes a ne'er do well in one garden, if thrown over the fence, will do remarkably well in another garden.

The monthly exhibition of plants and flowers was well patronized. James Garthley of Fairhaven showed an excellent vase of Lady Bountiful carnations. Refreshments were served and a very pleasant evening passed.

The schedules for the annual show to be held September 12, 13 and 14 are ready for distribution.

PEONY SOCIETY.

The next meeting and exhibition of the American Peony Society will be held at the State College of Agriculture, Cornell University, Ithaca, N. Y., on Tuesday and Wednesday, June 18 and 19, 1907.

A. H. FEWKES, Secretary.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The subjects at the club meeting, May 7, "The Credit System" and "Bedding Plants," brought out a good attendance. There was quite a liberal display of plants from home growers. S. J. Wolfe showed alstromeria and a very pretty amaryllis. The alstromeria was thought a good plant to force for Easter. H. L. Blind Bros. showed geraniums, all double; no demand for singles in their trade. La Favorite for white, Nutt and Beaute Poitevine, are their leaders, Nutt selling twenty to one of the others. They also displayed double petunias, lantanas, salvia, Baby Rambler roses, Boston fern, cannas, climbers and bedding plants in variety. C. S. Crall showed geraniums, including Dryden and Telegraph. Wm. Cromack showed dwarf ageratum in bloom not four inches high.

Jno. Bader spoke at length on "The Credit System." T. P. Langhans read a carefully prepared paper on "Credits and Collections" which he thought the most neglected part of the florist's business, due in part to the jealousy and keen competition which exists among florists. In many other lines of business the merchants are organized in a way which enables them by mutual exchange of information to keep posted on the dead beats and poor pay customers and to keep their losses at a minimum, but in the florist's trade in Pittsburgh no such understanding exists, and there is nothing to hinder a dead beat customer from victimizing one florist after another, until he has made the rounds of the trade. Mr. Langhans advocated close collections, and—for retail stores—collectors. He also spoke strongly against the general idea of the public that the florist has great profits. He thought that taking into consideration the long hours of the florist, the absence of the half-holiday on Saturday, and the frequent Sunday work, that there was no business with so little pecuniary reward.

The subject of the meeting for June 4 will be "Plants and Flowers Most in Demand for Decoration Day," with samples. The president appointed speakers for the meeting.

H. P. JOSLIN, Secretary.

MORRIS COUNTY (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

At the regular May meeting of this Society a paper was read by Arthur Herrington on the "Making and Care of Lawns." It was an instructive paper and much appreciated by the members. Two vases of gladiolus Blushing Bride and two of gladiolus Peach Blossom were shown from Florham Farms; a cultural certificate was awarded. The meeting was in great part devoted to revising the schedule for the fall show, which we have decided to hold on Oct. 31st and Nov. 1st of this year.

E. R.

LENOX HORTICULTURAL SOCIETY.

A regular meeting of the above society was held Saturday, May 4, President Heremans in the chair. Thomas Proctor was awarded a first-class certificate of merit for two very fine plants of *Rehmannia angulata*, grown and shown for the first time at Lenox. This very beautiful half-hardy herbaceous perennial comes from Central China. It is very free flowering; the flowers borne up the stem are rosy purple, about three inches in diameter, and have a rich yellow throat dotted with purple. The individual flowers are large, striking and showy. Seeds sown early in the year will flower the same year—a welcome addition for conservatory use. Mr. Proctor was also awarded two certificates of cultural commendation for two well grown plants of *Scizanthus Wisetonensis* in ten-inch pots, and *Phlox divaricata* in ten-inch pans. Next meeting night is Saturday, May 18, when important business will be brought up before the society.

G. H. INSTONE, Secretary.

NEW YORK FLORISTS' CLUB.

The May meeting of this club was held on Monday evening, May 13, at the Hotel Earlington. Fifty-five members were present to listen to Mr. Skidelsky's paper on the National Flower Show. The paper was much enjoyed and brought up a lively discussion. Some twenty or more members participated and the universal sentiment seemed to favor giving a big boost for the Chicago show. The trustees were instructed by vote to secure proper meeting rooms for the club. Patrick O'Mara, Alex. Wallace and John Young were appointed committee on closer relations with the Horticultural Society of New York, with a view to co-operative exhibitions in New York City.

After the meeting John Birnie escorted Secretary Young, John Donaldson and several other members to the plant market as his guests and not only gave them a royal good time but showed them some things about the plant market they never before realized.

The Club outing seems to be a pronounced success in advance, as over \$500 has been promised in prizes and program advertising.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular monthly meeting of the club will be held at Horticultural Hall on Tuesday evening, May 21st, at 8 o'clock. In lieu of a lecture there will be a ten-minute talk on Bulbous bedding plants. Herbaceous plants as bedders, and Tender bedding plants, followed by a discussion. Exhibits of hardy bulbous and other seasonable flowers are invited. There will be a whole host of other attractive features which, it is hoped, a large number of members will come and enjoy.

W. N. CRAIG, Secretary.

AMERICAN ASSOCIATION OF NURSERMEN.

Convention program, Hotel Cadillac, Detroit, Michigan, June 12, 13, 14, 1907:

JUNE 12TH, 9.30 O'CLOCK A. M.

Calling to Order—President Orlando Harrison, Maryland.

Welcome to Mich'gan—Charles A. Illgenfritz, Michigan.

Response—Charles T. Smith, Georgia.

Welcome to Detroit—Mayor Wm. H. Thompson.

Response—Stanley H. Watson, Texas.

President's Annual Address—Orlando Harrison, Maryland.

Report of Standing Committees—Transportation, Tariff, Legislation, Ways and Means, Uniform Inspection, National Council of Horticulture, Arrangements, Publicity, Editing Report.

Report of Secretary; report of Treasurer. Report of Special Representative—E. Albertson, Indiana.

Selection of State Vice Presidents.

JUNE 12th, 1.30 O'CLOCK P. M.

Preparing Nursery Land—R. G. Chase, Geneva, N. Y.; C. C. Mayhew, Sherman, Texas; John Siebenthaler, Dayton, Ohio.

Cultivating Nursery Stock—G. N. Hobbs, Bridgeport, Indiana; J. F. Donaldson, Warsaw, Kentucky; Geo. Marshall, Arlington, Nebraska.

Growing and Grading Apple Seedlings and Apple Trees—F. W. Watson, Topeka, Kansas; E. S. Welch, Shenandoah, Iowa; R. J. Bagby, New Haven, Missouri.

Growing Peach—J. C. Hale, Winchester, Tennessee; W. T. Hood, Richmond, Virginia; F. D. Green, Perry, Ohio.

Meeting of Nurserymen's Mutual Protective Association at 4 o'clock p. m. (Place to be announced.)

JUNE 12TH, 8.00 O'CLOCK P. M.

Nurseries of the United States. (Illustrated.) Prof. John Craig, Cornell University, Ithaca, N. Y.

JUNE 13TH, 9.30 O'CLOCK A. M.

Growing, Grading and Storing Grape Vines—E. H. Pratt, Fredonia, N. Y.; Eugene Willets, North Collins.

Growing Ornamentals—W. H. Wyman, North Arlington, Md.; R. C. Berckmans, Augusta, Georgia; Geo. C. Perkins, Newark, N. Y.

Growing Cherry—W. F. Heikes, Huntsville, Ala.; J. W. Gaines, Zenia, Ohio; Harry D. Simpson, Vincennes, Ind.

Growing Small Fruits—W. N. Scarff, New Carlisle, Ohio; N. E. Chandler, Argentine, Kas.; C. A. D. Baldwin, Bridgeport, Mich.

Spraying Nursery Stock—J. H. Hale, South Glastonbury, Conn.; H. McDonald, Salem, Oregon.

JUNE 13TH, 1.30 O'CLOCK P. M.

Storage of Nursery Stock—D. S. Lake, Shenandoah, Iowa; J. M. Underwood, Lake City, Minn.; H. G. Bryant, Davenport, Iowa.

How Can Nurserymen Prevent Apple Crown-Gall and Hairy-Root—Prof. C. G. Hedgcock, U. S. Department Agriculture, St. Louis, Mo.

Marketing Nursery Stock—Charles E. Greening, Monroe, Mich.; C. J. Maloy, Rochester, N. Y.; Geo. H. Whiting, Yankton, So. Dakota.

Shall this Association Attempt to Establish Standard Sizes or Grades for Fruit Trees—J. M. Pitkin, Newark, N. Y.; E. P. Bernardin, Parsons, Kansas; Abner Hoopes, Westchester, Pa.

Meeting of American Nurserymen's Protective Association at 4 o'clock p. m. (Place to be announced.)

JUNE 14TH, 9 O'CLOCK P. M.

Managing Salesmen—J. W. Hill, Des Moines, Iowa; C. R. Burr, Manchester, Conn.

Need of Co-operation Among Nurserymen—J. H. Dayton, Painesville, Ohio; H. S. Bird, Benton Harbor, Mich.

Shall We Change the Date of Annual Meeting?—Wm. Pitkin, Rochester, N. Y.; Peter Youngers, Geneva, Nebraska.

Report of Committee on Exhibits; Report of Committee on Resolutions; Election of Officers; Selection of next place of meeting.

ST. LOUIS FLORISTS' CLUB.

A very large attendance at the club meeting on last Thursday afternoon enjoyed a most interesting meeting. Good delegations from Kirkwood, Ed-

wardsville and Collinsville were in attendance. According to Secretary Beneke the membership has again reached 100.

The trustees made a report that they had made all arrangements for the celebration of the club's twentieth anniversary, which will take place in the new and elegant Hibernian Hall. This will be for florists only. Members and their florist friends will be invited. It will be a stag affair, with music, singing, dancing and refreshments—as Chairman Smith says, a round of pleasure during the entire evening. The trustees were also instructed to prepare for the club's annual picnic during the month of July, and report arrangements at the meeting in June.

A great discussion was started on the question as to the different ways of fumigation. Prof. Irish, G. H. Pring and G. Fulgraf of the Missouri Botanical Garden were present and took part in the discussion. J. F. Amann and Frank Fillmore added greatly to the discussion by their long experience. This question of fumigation will be continued at the next meeting. President H. C. Irish will, it is said, map out a programme for the June meeting which will take place June 13, at 2 o'clock.

CONNECTICUT HORTICULTURAL SOCIETY.

The regular meeting of this body was held in County Building, on Friday, May 10. President Sternberg oc-

cupied the chair and there was a large attendance of members. It was pansy night, and considering the backwardness of the season the quality of the exhibits was surprisingly good.

The bright particular event of the evening was a lecture on "The History of the Modern Pansy" by John Gerard, New Britain, Conn. Mr. Gerard, who is one of our active members, is a noted pansy specialist and handled his subject in masterly style. He traced the descent of the famous strains of today back to the original, small violas and proved conclusively that the credit of "creating" the modern pansy belonged to a Miss Mary Bennett (daughter of an Earl of Tankerville) who began the selection and hybridizing of violas at Walton-on-Thames, England, in 1810. The address was listened to with much interest and the lecturer was awarded a hearty vote of thanks.

The committee appointed to judge the exhibits announced their awards as follows: John Gerard, diploma; T. F. Huss, J. A. Weber and E. F. McDermott, certificate of merit; Amos Reynolds and J. Ketzmeier, honorable mention. The committee on exhibitions reported progress and inti-

mated that the fall show would be held early in November. The society is in a flourishing condition and at this meeting seven new members were added to the roll.

ALEX. CUMMING.

AMERICAN CARNATION SOCIETY.

Carnation Registered.

By Mrs. Jennie P. Snow. Andrew Carnegie. A red sport of Harlowarden, a perfect glowing scarlet, good keeper and fine shipper, much freer than Harlowarden and a continuous bloomer with a perfect non-bursting calyx. This name is used provisionally to be approved or rejected at the next annual meeting of this society.

A. M. HERR, Secretary.

Lancaster, Pa.

CLUB AND SOCIETY NOTES.

The San Diego Floral Association, San Diego, Cal., will hold their flower show on May 29.

The Naturalist Society of Central Falls, R. I., has appointed a committee to arrange for a flower show in June.

The rhododendron show of the Massachusetts Horticultural Society has been postponed from June 1 to June 8, on account of the backward season.

The Amateur Horticultural Society of Springfield, Mass., at its meeting on May 3 decided to hold a flower show in June, the date to be decided on later.

The Rose Society of Portland, Ore., are making plans for an extensive rose show. The Forestry building at the Lewis and Clark fair grounds has been secured for the display.

The California State Floral Society of San Francisco, which is the oldest of its kind on the Pacific Coast, will join with the Pacific Coast Horticultural Society in holding a flower show in October.

The American Association of Park Superintendents is considering the advisability of changing the date of its Toronto meeting from August 6, 7 and 8, to August 15, 16 and 17, for the convenience of those of its members who would like to include in this vacation trip the convention of the S. A. F. at Philadelphia, which opens on August 20.

The annual meeting of the American Association of Nurserymen will be held at Detroit, Mich., on June 12, 13, 14, 1907, in the Hotel Cadillac, and extraordinary efforts are being put forth to make this the largest convention in the history of the Association. The officers are: President, Orlando Harrison, Berlin, Md.; secretary, George C. Seager, Rochester, N. Y.; chairman of exhibits, Thomas B. Meehan, Dreshertown, Pa.

A CORRECTION.

The Siberian Iris (I. Sibirica) which was the subject of our frontispiece in last week's issue, was inadvertently designated in the title as Spanish Iris, a mistake which was no doubt immediately apparent to most of our readers.

THE NATIONAL FLOWER SHOW.

A Paper Read Before the New York Florists' Club by S. S. Skidelsky.

The proposed National or International Flower Show, to be held at Chicago during the month of November, 1908, will unquestionably prove an epoch making event in the history of horticulture.

And right here the thought occurs to me, that, unless we put forth our best efforts and our utmost energies, bearing in mind that upon the success or failure of this first attempt hinges the future of an industry, involving millions of dollars, unless we stand shoulder to shoulder and work for the common good of all—each according to his means and might—unless we do this, I say, we shall have no right to enter the ranks of progressive business men.

It is nearly two years ago, at Washington, when E. G. Hill—"the sage" of Richmond, Ind., first broached the subject of a National Flower Show. His observations on the European continent, where such shows are held annually under the auspices of Royal and National Horticultural Societies, as in England and France for example, led him to believe that an enterprise of this sort, undertaken by the Society of American Florists and given under the auspices of the American Sovereigns—the people—could not but prove a success. And how, I will ask in passing, could it prove otherwise?

As a matter of course, opinions pro and con were freely expressed on all sides. There were those who predicted inevitable failure, basing their predictions upon no other reasons than such as presented themselves to their distorted, pessimistic imaginations. "Why, indeed, should a National Flower Show be thought of at all? Why? Haven't we plenty of local shows of all kinds—they reasoned—that never pay? And who would benefit by this National Show anyway? Men, who have something to sell, of course. It is all nonsense, they concluded—and there is nothing to it."

There were others, however, who took a much broader view of the situation, whose mental vision was in no wise circumscribed by petty jealousies or selfish motives of one sort or another, who could see the great possibilities for the advancement of horticulture, who could realize the inestimable advantages that would accrue to our interests, who, in brief, took a retrospective view of horticulture, comparing the present with the past and drawing their conclusions as to the future. Kindled by an enthusiasm well worthy of the cause, there soon formed a small circle of men, who were, so to speak, carried away by the idea—and a subscription list for the necessary premium guarantee fund was started. Something like \$4000 was subscribed there and then. Thus the idea of a National Flower Show—the first show of the kind ever attempted upon the American continent—bids fair to become a successful reality.

The National Flower Show, it may be depended upon, will not only come to pass, but like any other great work, ever attempted by public spirited men for the benefit of a people at large—it is destined to fulfil a mission; it aims to inspire them with a desire for all

to educate our people, to enthuse them, that is beautiful in nature, to show them by means of an object lesson how things can be done, how the humble garden and the humble cottage of the workingman can be made as attractive in their way as the magnificent grounds surrounding the stately mansion of the millionaire. What the progressive and enterprising florist has attempted and has carried out in a small way in his own town—what public spirited individuals have accomplished by way of spreading the idea of horticulture in their own communities,—the National Flower Show aims to do on a large scale. We are all familiar, more or less, with the history of the National Cash Register Company's institution at Dayton, Ohio. We know that Mr. Patterson, the head of that model institution—has worked long and hard to transform a wilderness into a garden spot. We have been told how rowdism that took pleasure in wanton destruction of flower beds and lawns was converted in the end to the gospel of ornamental horticulture, how unsightly cottages in the immediate vicinity of that institution were transformed into beautiful little palaces, how tin cans and rubbish heaps of all sorts disappeared, flower beds and shrubbery taking their place. To the moralist—such a transformation bears another lesson, for who will question the benign and wholesome influence of beautiful surroundings upon the mind and character of the child, the youth—our future lawmaker or law-breaker?

He was a wise man indeed, who said: "Tell me your company—and I will tell you who you are." To paraphrase this saying—we may put it thus:

"Show me your surroundings—and I will define your character and social standing in your community."

After all we are but creatures of circumstances,—to the one who rises from amidst squalid and filthy surroundings and forces his way through into a world of light—there are hundreds who succumb to the darkness and wretchedness of the nether regions.

If I remember rightly, it was the late Benjamin Harrison, who, in a speech at one of the Indianapolis chrysanthemum shows, remarked, that "the man who loves flowers, was never known to abuse his wife"—or something to that effect.

But, to return to the subject, stripped of its moral element. Viewed in the light of pure utilitarianism of commercialism, a National Flower Show, such as it is intended to hold at Chicago, must as a matter of course bear good fruit. We need but recall the early struggle of the florists of a generation or two ago, men still living in our midst,—their trials and tribulations long before a Society of American Florists and Ornamental Horticulturists sprung up, long before a Carnation Society made its appearance or a local flower show of any sort was ever thought of, to arrive at the conclusion that the progress we have achieved was due in a large measure, not so much to individual endeavor or to individual enterprise, as to a combination of efforts, having for its aim the benefit of each, individually, and of all as a body.

Whatever arguments one may advance in favor of that hackneyed in-

junction, "Attend to your own business, etc.," whatever success one may point at as the result of strict attention to one's own affairs, it is a fact beyond dispute that the Society of American Florists and Ornamental Horticulturists is responsible for most of our achievements in the past and, if I may venture a prophesy, for much more than we are sure to accomplish in the future. I will go further and say, that the Society of American Florists, as a body, composed of earnest, energetic, progressive and intelligent men, is directly responsible for the success of the very man, who "can't see what good it will do him to join our Society." "What Good?" Let the history of our Society speak for itself. Twenty-five years of energetic work along progressive lines has brought about the results which we see in the greenhouses, at the store, on the highways and byways throughout the land. Our improved products, the evolution of the button-sized carnation, the measly rose and chrysanthemum with perfect specimens of their kind, our improved facilities of marketing our products, our business methods, etc.,—are all due to organized effort, to the Society of American Florists.

"What good?" I need but cite the recent victory scored by our Society before the Interstate Commerce Commission—a victory that will compel the United States Express Company to submit to reasonable rates and incidentally, will save dollars to the man who can't see any good in our Society.

Verily "in union there is strength." We all know by experience what it means to give a local flower show; we know how these flower shows, whether financial successes or financial failures, have induced the growers to vie with each other in their efforts to show their best products, how these in turn, have induced the dealers to handle the best at prices remunerative to both the growers and themselves, how furthermore, the flower buying public has learned to discriminate, to draw the line between a high-grade flower and the semblance of one, not marketable at any price. The demand at all times, as we all know, is for high grade stock. To the man or woman, to whom all flowers looked alike but a few years ago, nothing but the best appeals today. Whence this change, this tremendous advance along progressive lines within but a comparatively short space of time? The answer is easily given. The local flower show, often held under adverse and discouraging conditions has brought about this result; it has educated the public, it has brought the grower and the dealer together; it has induced the private gardener and the amateur to advance to the front and to improve upon past achievements. Thanks to these shows we have ceased to dwell within our own shells, to grope in the dark, as it were, each for himself. We have learned by actual experience the lesson of combination, or "community of interests," if I may borrow the expression that has originated somewhere on Wall Street.

What has been accomplished, I repeat, by the progressive florist in a small way, in his own town, what the public spirited individuals have brought about in their own communities, what the florists' clubs have

NEPHROLEPIS

Piersoni Elegantissima

The Tarrytown Fern

A good stock in all sizes on hand at all times. A splendid seller and money-maker. Large specimen plants, ready for immediate sale: 6-inch at 75c and \$1.00 each; 8-inch at \$1.50 and \$2.00 each; 10-inch at \$3.00 each; 12-inch at \$5.00 each; 14-inch at \$7.50 each; 16-inch at \$10.00 each. Also fine young stock for growing on, 2¼-inch at \$8.00 per hundred.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

achieved by means of giving occasional flower shows, the promoters of the National Flower Show aim to accomplish for every florist, nurseryman, gardener and amateur—of every city, town and village—in every State in the Union.

It is the aim and object of the National Flower Show, to be held at Chicago, not only to bring forth the best there is in cultivation, both here and abroad, for the inspection of "society folks"—but also to inaugurate a campaign of education for the benefit of our people as a whole—to demonstrate, if such a thing is possible, through the public press and by means of circular letters, pamphlets, etc., to the great mass of horny-handed Americans the beauties and wholesome influences of shrubs, flower beds, lawns and trees—in a word, to promote horticulture in all its branches among all the people.

How often do we hear such remarks, that, "horticulture in this country is still in its infancy," that the possibilities for its development are practically unlimited, that much as we have advanced during the past decade or two, the future development of horticulture bids fair to surpass our most sanguine expectations. If this be true, as it unquestionably is, is it not high time that we make some effort to hasten the approach of its development? Is it not within our own power to devise some means and ways in order to bring about the results desired more speedily and within our own time? Why wait until Mrs. Jones' infant daughter, playing upon a rubbish heap in that back yard, may some day, when she grows into womanhood and has a home of her own, prefer a canna bed to a bed of tin cans? Why not show to Mrs. Jones herself the striking contrast between the two—the beauty of the one and the unsightly, ugly features of the other?

Is it not within the range of possibility that Mrs. Jones may turn the scales in favor of the flower bed? Aside from the fact that the National Flower Show is sure to bring dollars and cents into the pockets of the very

men who have neither the time nor the patience for "such innovations"—aside from the fact that a show of this kind is sure to benefit our people at large, for no industry, be it the cultivation of sugar beets—or shrubbery—was ever known to prove otherwise but beneficial to a community—aside from these obvious facts, we must not overlook the educational, aesthetic and moral features of such a flower show—a benefit that can neither be overestimated, nor can it be estimated by the usual standard of dollars and cents.

After all, the future of horticulture, like the future strength and stability of our beloved republic, depends, not so much upon the favored few, able to gratify their whims and desires, as upon the great mass of the American people. The future of horticulture hinges not upon what is being or will be done at Newport, along the Hudson or at Lenox, but upon the general improvement in the conditions, environments and educational standards of our people throughout the great American continent. Just as soon as the miner in the Pennsylvania coal regions, or the laborer in the overcrowded tenements in our cities, or the farmer in the Dakotas will deem it a necessity to relieve the squalor and the painful monotony of their daily surroundings by the introduction of a potted plant, a flower or a shrub into their homes—just as soon as this comes to pass—as come it will—the future of horticulture will be laid on a solid and most enduring foundation.

And right here I can scarcely refrain from saying a few words (although I am repeating myself) on the need of organization, on the need of concerted action in behalf of a common cause. That Chicago will have the honor as well as the Herculean task to hold this first National Flower Show—done not necessarily mean, as some perhaps are prone to think, that this is to be a Chicago affair. Not by any means. While Chicago undertakes the work—and a tremendous work it is—it will depend on the aid and co-operation of the Eastern cities

and the Eastern growers. This is certain. It is likewise certain that in order to make a success of this, our first attempt, there must be no division of forces, no division of interests, no geographical lines drawn. Boston, as well as Milwaukee, must come to the front and help share the burden of Chicago. "Let us ever remember," said the late President McKinley, "that our interest is in concord, not in conflict."

Let us remember this, if we wish to see horticulture upon a plane equal to that of any other great industry in our country.

MOVEMENTS OF GARDENERS.

J. R. Duby has assumed the duties of gardener to John Shepard, Phillips Beach, Swampscott, Mass.

Andrew Meyer has been reappointed city forester with Wm. Jordan as assistant in St. Louis, Mo.

David Gordon, formerly gardener on the Plant estate at Eastern Point, Ct., has taken charge of the greenhouses and grounds of A. M. Young at Bradford, Ct.

In and Around Morristown, N. J.

Wm. Kissling has accepted the position of head gardener to Edward A. Day, Madison Ave.

Frank Cullen has moved here from Summit, N. J., to take charge of the greenhouses and gardens of Geo. E. Chisolm.

"Jack" Downing will continue his foremanship in the greenhouses of Dr. D. H. McAlpin, Littleton, N. J., for another year.

John C. Elliott, formerly foreman in the "Spring Brook Farm" greenhouses, has accepted the position of superintendent on the estate of John I. Waterburg, Glen Road.

Samuel Stewart, formerly head gardener to G. E. Chisolm, has accepted the position of superintendent on "Wheat Sheaf," the country residence of Gustav E. Kissel.

Geo. G. Frelinghuysen is having his place on Whippany road improved by extensive and artistic plantings of shrubbery. J. H. Troy is the architect and Richard Vince has charge of the work.

PUBLICATIONS RECEIVED.

The U. S. Dept. of Agriculture, Bureau of Biological Survey, has issued a circular on the value of swallows as insect destroyers. The importance of protecting swallows wherever found is emphasized, and the great usefulness of these birds in the war being waged against the cotton boll weevil in the south is forcibly demonstrated.

The Minnesota Horticulturist for May contains much practical information, especially for the fruit grower. A portrait and obituary notes of the late R. H. L. Jewett of Corning, Cal., is included. Secretary Latham gives the membership of the Minnesota Horticultural Society by which this monthly is supported as 2325, a pretty good evidence of Minnesota's interest in horticulture.

Among the recent valuable publications by the U. S. Department of Agriculture are Farmers' Bulletins, Nos. 282, 283 and 289, on Celery by W. R. Beattie, Spraying for Apple Diseases and the Codling Moth in the Ozarks by W. M. Scott and A. L. Quaintance, and Beans by L. C. Corbett, respectively. These are all very practical in their contents, fully illustrated and of great value to the truck farmer and fruit grower.

We have received from Secretary Wesley Greene volume 41 of the transactions of the Iowa Horticultural Society, being the annual report for 1906. It is a bound volume of over 500 pages. The fruit grower will find in it much to interest and instruct, especially on the subjects of apples, plums, and strawberries. The possibilities of fruit growing in Iowa are well brought out in a number of valuable papers and the ornamental trees and plants are not forgotten.

The set of Forest Service circulars and leaflets sent out by the Department of Agriculture April 29, 1907, contain much instructive matter for public enlightenment as well as for the use of those directly interested in tree planting. There are fourteen of them. Among the trees treated upon are the Russian mulberry, white ash, slippery elm, white willow, black walnut, tamarack, Osage orange, coffee tree, green ash, yellow poplar, black cherry and sugar maple.

Proceedings of the Sixteenth Annual Meeting of the American Carnation Society, held in Toronto, Ont., January 23 and 24, 1907. This is an exceptionally fine report, the most complete and accurate ever issued by the American Carnation Society we should say. It contains much that the ambitious carnation grower needs to know and nobody should think of carnation growing as a profession or a pastime in these days without having a copy of this report. Membership in the society is the only cost and it is cheap at that. A list of members is appended but the honorary members are, for some reason, overlooked.

LIST OF PATENTS.

Issued April 30, 1907.

- 851,675. Harrow. Jacob C. Ferguson, Wilber, Nebr.
- 851,710. Hopple or Regulator for Plows. William N. Thornton, Cedar Hill, Texas.
- 851,727. Cultivator. William M. Ashmore, near Rara Avis, Miss.
- 851,729. Plow. Spencer B. Carter, Elizabeth City, N. C.
- 851,741. Seed Planter. James S. Gardner, Java, Ala., assignor of one-half to Jesse W. Dismukes, Java, Ala.
- 851,750. Replanting Attachment for Cultivators. Marion F. Hodges, Rushville, Ill.
- 851,840. Lawn Trimmer. Sumner O. Sawyer, Traverse City, Mich.
- 851,872. Plow. Willoughby D. Dozier, Weeksville, N. C.
- 851,901. Mower. James H. Sherrard, Sparta, Ill.
- 851,902. Plow Jointer. Roy C. Smith, East Germantown, Ind.
- 851,928. Manure Spreader. Frank M. Goodhue, Batavia, Ill.
- 851,959. Agricultural Implement. Peter Peterson, Chicago, Ill.
- 852,086. Plow Attachment. Wilson B. Tunnell, Van, Texas.
- 852,109. Drill. Dean B. Edwards, Wauchope, Saskatchewan, Canada.
- 852,251. Plow. Charlie C. Addington, Wheelersburg, Ohio.
- 852,316. Cultivator Shovel or Tooth. Charles Burmeister and Earnest Boldt, Calumet, Ia.

Issued May 7, 1907.

- 852,669. Cultivator, George S. Mayn, Tipton, Ind.
- 852,746. Draft Appliance for Farm Implements. William T. Stevig, Pulaski, Iowa.
- 852,777. Combined Lister Plow and Planter. Thomas J. Dudley, Abilene, Texas, assignor to Ed. S. Hughes, Abilene, Texas, and H. C. Stahl, Bellevue, Ohio.
- 852,843. Plow. Marvin D. Main, Cortland, N. Y., assignor of one-half to Lynn R. Lewis, Cortland, N. Y.
- 852,996. Plow. Conrad Bohrssen, Gross Munzel, near Wunstorf, Germany.
- 853,004. Plow. Wilhelm G. Danielsen, Logan, Utah.
- 853,039. Cultivator. John J. Stalder, Meade, Kansas.
- 853,046. Steam Plow. Jesse W. Vaniman, Wichita, Kansas.
- 853,047. Plow. Richard J. Vickery and John J. Dinsmore, Clark, S. D.
- 853,072. Combination Weed Gatherer and Cutter. John N. Eames, Medford, Mass.
- 853,160. Disk Harrow. Cyrus N. Cass, Spangle, Wash.
- 853,179. Hoe. James S. Lestel, Atlanta, Georgia.

PAYS US WELL.

You will please not repeat our large advertisement of last week, as the goods we offered have all been sold. Over \$500 worth of direct sales from one offer pays us well, as in fact all our advertising in HORTICULTURE does.

A. H. HEWS & CO., Inc.
Cambridge, Mass., April 25, 1907.

	Mixed	50c

Primula floribunda grandiflora		
	(Buttercup)	50c
"	Forbesii (Baby Primrose)	25c
"	Kewensis (Giant yellow Buttercup)	\$1.00

This charming addition to our greenhouse Primroses originated at the Royal Gardens, Kew, as an accidental cross between the small, but bright-flowered Himalayan species, *P. FLORIBUNDA*, and the sweet-scented *P. VERTICILLATA*, a native of Arabia. The plant is a strong grower, with bright green leaves, and numerous erect flower-scapes, 10 to 18 inches in height producing flowers in whorls at intervals along their whole length. The flowers are fragrant, bright yellow in color, with a slender tube and spreading limb, nearly an inch in diameter. As a winter-flowering decorative plant it is an acquisition; its floriferousness when in a very small state is remarkable.

ARTHUR T. BODDINGTON

342 W. 14th St., N. Y.

FIGHTING THE MOTHS.

Without opposition, the Massachusetts legislative committee on agriculture has recommended an appropriation of \$225,000 to stop the moth pest as far as possible during the coming year, although Vice-President Elson of the Society for the Suppression of Gypsy Moths said that all idea of exterminating the moths in Massachusetts had been given up.

At the hearing held before the board the moth fighters from the infected sections were present in force and outlined the work necessary to prevent the ravages of their arch enemy and then asked for the appropriation.

Extermination is the watchword in the districts outside the reservations. In the latter places they will work on suppression. They said that the parasites were still in the experimental stage and they would aid in suppressing the pests.

Field Agent Enwright of Medford said that to exterminate the moths at the present time they would need the assistance of the Almighty, but that the parasites had brought a new hope to the fighters.

We would like to inform the trade that our representative, Mr. De Groot, has left today for a trip through Europe for the interests of our business, looking after the packing and filling of the orders of our American customers, visiting the Holland, Belgium, French and German growers and make arrangements to remove our headquarters now at Arnhem, Holland, to Hillegom, Holland.

JOHN SCHEEPERS & CO.

Seed Trade

Sweet peas, under favorable conditions, have produced as high as a ton and a half of seed to the acre.

It has been computed that the Santa Clara Valley, California, produces a little more than 2,000,000 pounds of seed per annum, the sale of which brings in upwards of \$1,500,000 yearly.

A writer in The Garden states that all seeds that rats, mice or birds esteem can be effectually protected by coating them with red lead. After dampening the seed the red lead is stirred among them until each kernel is coated and separate.

The twenty-fifth annual convention of the American Seed Trade Association is to be held in New York, June 25-27, at the Hotel Astor. The hotel is centrally located, only a short distance from the Grand Central Station, convenient to the subway and all surface lines, and is a most suitable place for the holding of the convention.

CATALOGUES RECEIVED.

Kelly's Market Garden, East Spokane, Wash.—List of vegetable plants, small fruits, etc.

A. Hielscher, the progressive wireworker of Detroit, is mailing a well illustrated price list to the trade.

S. J. McMichael, Findlay, O.—Wholesale Trade List of Vegetables, Greenhouse and Bedding Plants.

Phoenix Nursery Company, Bloomington, Ill.—A very full list of fruit and ornamental trees, shrubs, and climbers and hardy border plants.

INCORPORATED.

The Pennsylvania Nursery Co., Shermansville, Pa., has been incorporated with capital of \$25,000.

The J. E. Wing & Bros. Seed Co., Mechanicsburg, O., by J. E. Wing, W. C. Wing, C. B. Wing, Janette Wing and T. M. Clemans; capital stock \$30,000.

NEWS NOTES.

Robt. Klagge of Mt. Clemens, Mich., declares La Detroit to be the best paying rose on his place.

The Society of Horticulture of Orleans and Loiret, France, has awarded a gold medal to Levavasseur & Sons for their pink "baby rambler" rose, Maman Levavasseur.

The Woman's Club of York, Pa., has inaugurated a movement to convert the public school yards into flower gardens and playgrounds for the children during the summer.

The Gardeners' Chronicle for April 27 contains a supplementary illustration of *Hippeastrum Queen of Spots*, a cross between a show variety and *H. pardinum*. It appears to be a perfect beauty, uniquely spotted carmine on white ground.

The Royal Horticultural Society of London, Eng., awarded the silver gilt Lindley medal on April 30 to the beautiful *Gloriosa Rothschildiana*. An award of merit was given to carnation *Jessica*, color "white flaked with scarlet." Any relative of our *Jessica*?

A new rambler rose named *Tausendschon*, of German origin is well spoken of in foreign horticultural journals. The flower is described as large—nearly three inches across—fairly double, five to eight in a cluster, color pink suffused yellow. Its habit of blooming clear down to the base indicates future popularity as a pot plant.

There are on exhibition in the glass show case in Welch Brothers' establishment in Boston several seedling carnations raised by John Barr, one of which is to all appearances a highly improved *Victory*. In color, form, fragrance and habit it strongly resembles that famous variety, but the flower is considerably larger and more symmetrically built. It is surely worth watching.

MONTREAL NOTES.

The weather still continues very cold and but little planting or seeding has been done. The trade in general is complaining of dullness. The seed people are not rushed as usual owing to the backward spring.

There have been many changes among the florists this spring. S. S. Bain has given up his Beaver Hall store; Jos. Bennett has gone out of the retail business, and is missed from the place on Windsor street that he occupied so long; D. J. Sinclair has closed his branch here, and Mrs. Graves has retired from business. We hear that Mrs. White will go out of business and Baker of Longueville will probably succeed her. Drennan of Westmount is also looking for a place to locate. Mr. Gray, late Montreal manager for Sinclair, has taken full charge of the Wright store on St. Catherine street. He took the third prize for window decoration for the Horse Show held last week.

The Dutchmen have shipped large consignments of roses, palms and other stock to the auction rooms lately, where they were sold for anything they would bring. This injures the trade to a very large extent.

Spring Bedding Plants

Crimson Ramblers

strong, shapely plants with an abundance of flowers, 7-in., 50c, 75c, \$1.00 each.

Baby Ramblers, 5-in., 20c, 25c each; 6-in., 35c, 50c each.

Cannas, strong plants, \$10, \$12.50, \$15, \$20 per 100.

Crotons, assorted varieties, \$25, \$35, \$50 per 100.

Hydrangeas, \$20, \$25, \$50, \$75 per 100.

Periwinkle, extra long, 4-in., \$15, \$18 per 100.

Geraniums, 4-in., all colors, \$8, \$9 per 100.

Coleus, 3-in., \$4, \$4.50 per 100.

Alternanthera, 2½-in., red and yellow, \$4.00 per 100.

Hardy Ivy, 3 and 4-in., \$10, \$12.50, \$15 per 100.

PERSONAL.

A. W. McIntosh has recently been appointed chief gardener at the Soldiers' Home, Togus, Maine.

W. J. Marshall of Togus, Me., has taken a position with the Copeland Street Greenhouses, Campello, Mass.

The marriage of Philip Lunden of Olsen & Lunden, Southington, Ct., to Miss Anna Olsen of Plantsville is announced.

Madison Miesse of Lancaster, Ohio, one of the largest market-gardeners and forcers of lettuce and tomatoes, has secured the services of Fred Windmiller, who has lately been with the Cleveland Cut Flower Company.

Park Commissioner Philip Breitmeyer and Secretary M. P. Hurlbut of the Detroit park department are visiting Boston on a tour of inspection of park roads, bathing houses, etc., under conduct of W. W. Castle, J. A. Pettigrew, P. Welch and W. J. Stewart.

BUSINESS CHANGES.

Jonas Brooks has purchased the Summit street greenhouses, Woonsocket, R. I., from Thos. H. Greene.

The Ozark Nursery Co., Tahlequah, Okla., has absorbed the Ben Davis Nursery, Bentonville, Ark., and the Parker Nurseries, Fayetteville, Ark.

G. H. Chapman of St. Johns, Mich., who purchased at auction the portable house and greenhouse stock of C. H. Manley, has formed a stock company for the purpose of erecting suitable buildings and gaining facilities for carrying on the business.

OBITUARY.

A. M. Pitt, for the past 20 years in the florist business in Hudson, Mass., died on April 21, aged 65.

John V. Walker of Sharpsburg, Pa., for the past four years gardener for Mr. Harry Darlington, died on May 1, aged 71 years. A widow and several sons and daughters survive him.

THE GLASS MARKET.

At the present moment practically all the hand operated window glass factories have closed their plants for the summer and will not resume work until some time in the fall, so that the present stocks will have to supply the demand for the next four months at the least.

As greenhouse sizes are in the way of being a specialty and not always turned out in sufficient quantities to meet the demand, it would seem advisable for buyers who are going to need glass during the summer or early fall months to cover themselves on their requirements now. Prices now are on a lower level than they have been at any time since the first of the year, and as present stocks become exhausted it would seem advances should naturally be looked for.

Pittsburg, Pa.—The agreement to close the window glass factories for the annual summer suspension was practically fulfilled on April 20.

Glass plants throughout western Pennsylvania and West Virginia suspended. A number of factories will remain open until the latter part of May.

Fully 20,000 men are affected.

Charles Adams has purchased the greenhouse property of Benjamin St. John, Darien, Ct.

3000 to 4000 Geraniums, S. A. Nutt, Beaute Poitevine, in 3 and 3½ in. pots, \$6.00 per 100.

200 Beaute Poitevine, very large plants, 13-15 inches in diameter, \$6.00 per dozen.

50 Vinca variegata in 8-in. pots, \$6.00 per dozen.

100 Spiraea astilboides grandiflora, \$6.00 per dozen.

Call and inspect the stock before buying elsewhere.

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

	Per doz.	100	1000
Albion (Tall). A variety which originated with us several years since and which is now offered for the first time. Strong grower, pure white with faint aniline red eye.....	\$1.50	\$10.00	\$90.00

N. F. MCCARTHY & CO., 84 Hawley St., Boston, Mass.

NEWPORT (R. I.) NEWS NOTES.

Joseph Leikens will open his store on Bellevue avenue next week, to be in a position to do business for Memorial Day.

Mr. and Mrs. Carl Jurgens, Jr., visited the Jamestown exhibition, and returned last week, well satisfied with their trip and the exhibition.

The influx of a number of cottagers and others during the past week has improved business conditions a good deal. As a matter of fact, cut flowers are selling better now than a month ago, Beauties especially.

For two weeks or more members of the government staff for the suppression of the gypsy moth were in Newport, hunting for evidence of its presence, but up to the time when they had diligently examined every tree in the city no such evidence came up.

Mr. James Murray has so far recovered from his illness as to be able to be removed to the new home of his family on Carroll and Harrison avenues. He is yet far from well, however, and with but little hope of his immediate recovery, his family prevailed upon him to give up absolutely his connection with the estate of Henry Clews.

There promises to be considerable interest taken in the matter of school gardens in Newport this year, and particularly in the competition for the cash prizes offered by the Newport Horticultural Society for the best kept gardens as well as products either of flowers and vegetables or both exhibited by school children, not neces-

sarily from school gardens. Mr. Lull, the superintendent of schools, and other persons in authority are doing considerable to further this interest.

The dealers are now beginning to lay in quantities of bedding plants for show purposes, and considering how cold the weather has been, the number that is being disposed of is wonderful. The planting of trees of all kinds and of shrubs is now in full swing, and it looks as if the rush incident thereto will last up to the time when the advance of vegetation will compel its abandonment. Several private places are undergoing a thorough overhauling and replenishing, necessitating the planting of large numbers of various kinds of trees, evergreen and deciduous. Notably among them are the estates of W. S. Wells and E. J. Berwin, both of which seem to periodically undergo treatment for their better adornment. And it is unmistakably a fact that in both cases each change seems to be a decided improvement, but, of course, to help that consummation there is either an increase of acreage or the expenditure of an almost unlimited amount of money, and may be both, with the still further assistance of two adept craftsmen of well known ability and taste for the performance of such undertakings. D. M.

FIRE RECORD.

Fire in the early morning of May 8, started in the greenhouse of G. W. & W. A. Temple, Woodville, Mass., but was extinguished before much damage was done. The loss was covered by insurance.

PHILADELPHIA NOTES.

William J. Moore has accepted a position with the S. S. Pennock-Meehan Co.

Jno. Burton was one of the arbitrators on the Farenwald greenhouse accident and discharged his duties to both sides in his usual fair-minded and businesslike style.

Much satisfaction is expressed here on the good work done by the S. A. F. in their fight with the United States Express Co. This victory affects the whole trade whether they be members of the National Society or not. Its a good answer to the tight ones who ask, "What's the society ever done for me?" when they are asked to turn in and help the work for the general good. Especially is the president of the society to be congratulated for having put up such a good fight—and almost single-handed, at that.

DETROIT IMPROVEMENTS.

The idea of transforming certain residential streets into boulevards to connect various city parks has received a new start in Detroit. A number of gentlemen who years ago formed the North End Improvement Club are seeking ways and means whereby Second Avenue will be widened to connect Cass Park, located inside the two-mile circle with Palmer park, about six miles north of it. Park Commissioner Breitmeyer and other city officials are lending a strong support to this plan and the State legislature will be asked for the needed amendment to the City charter.

NEWS NOTES.

Detroit reports a snow storm on May 11.

John Reese succeeds Miss Koch at 301 Flatbush Ave., Brooklyn, N. Y.

Joseph E. Cornell of Danbury, Ct., will move into larger quarters at 91 White St.

Alden Taylor has accepted a position with J. R. Morgan & Son, Glas-tonbury, Ct.

H. W. Hastings has closed out his florist business in the Purnell annex, S. Manchester, Ct.

Parse Bros. succeed Dean & Parse at Summit, N. J., W. S. Parse having purchased Mr. Dean's interest.

Albert B. Tuck, florist of Gloucester, Mass., has filed a petition in bankruptcy. Liabilities, \$1282; assets, \$520.

It is now A. C. Oelschig & Sons, Savannah, Ga., the second son of Mr. Oelschig having recently been admitted to partnership.

C. E. Robinson of Tarrytown, N. Y., and H. W. Requa have started in the retail florist business at 808 South street, Peekskill, N. Y.

Timothy Mullins has resigned his position with F. B. Fountain Co., Middleton, and will take charge of the conservatory of C. N. Jarvis of Berlin, Ct.

The Fleischman Floral Co. has opened a new and very attractive store in the Arcade of the United States Express Building, corner of Rector Street and Trinity Place, New York.

R. B. & A. B. Graves, florists, Northampton, Mass., will plant 23 acres to vegetables this spring, and contemplate the addition of houses for the purpose of continuing the industry in the winter.

G. H. Davis, Cambridge, Mass., who was recently restrained from selling flowers on Sunday except for purposes of necessity or charity, has entered complaint against L. W. Reyeroft, who has been doing a retail flower business in his drug store on Sunday. Reyeroft will make this a test case, and on being fined \$1 by the court, appealed and the case will go to the superior court.

CUT FLOWER MARKET REPORTS

BOSTON Market is still in a very dull condition here, there being an abundance of all kinds of florists' flowers but a demand entirely unequal to the distribution of same at any respectable figure. The main thought now is for Memorial Day and there is much speculation as to the supply that will be available for that occasion. Much depends upon the weather but, fortunately, the greenhouse crop will be sufficiently large to make a good showing, regardless of what the garden may yield.

BUFFALO Santa Claus and the Queen of May met last week. Snow storm in May time did not affect indoor social affairs and plans for the June ahead are going on apace. The supply of flowers has been somewhat short, especially carnations, which had been plentiful enough to supply more than the average buyer. Beauty, Richmond and other roses are in fine quality; good stock sells well but ordinary stuff drags. Lilies are in good demand but seem to be scarce; lily of the valley, peas, etc., are plentiful. Violets are still on the bill of fare but demand rather light. Although on Saturday a good amount was disposed of, the bargain sign of course had to be displayed.

COLUMBUS While it stays as cold as it is now, no one will even think of leaving the city for the summer; and thus it is that week after week florists are doing an especially good business in all lines. Cut-flowers are fine in quality, and with the one exception of carnations, in ample supply for all purposes. Carnations have kept up so

well in price, that very few fakirs are on the streets, which fact helps maintain retail values to a very great extent. There are yet some violets to be had and we are receiving the finest sweet peas of the season. The whole craft are now looking forward to the trade of Memorial Day, which has become such a feature here.

DETROIT Business quiet. Anyone seeing the snow storm which prevailed here last Friday might suppose we were nearer to Thanksgiving than Decoration Day. The old saying that there is no ill wind which does not blow good for somebody is true again. The rose and carnation growers are reaping good prices, with a supply below the demand. The former are very scarce. On the other side we find the plant grower apparently waiting in vain for an opportunity to dispose of his geraniums, etc. Violets are still in the market, finding a ready sale. Smilax is still very scarce, but the supply of ferns is a little more liberal.

INDIANAPOLIS The weather so far for the month of May has proven unseasonable. As a consequence there is no glut in any line. Business remains good and prices about the same. The quality and quantity of roses, including Beauties, continues good, and good prices prevail.

Carnations hold their own as to quality and price. Sweet peas are in brisk demand, some fine stuff being seen. Lilies and smilax are scarce while bulbous stock is entirely off the market. A heavy increase in the quantity of bedding stock grown this season is noticeable and appears to be farther ad-

vanced and will be in better condition when needed. The cool weather still prevents anything being done in landscape gardening. The prospects are that Decoration Day stock will be very scarce.

NEW YORK Cut flower stock is on the increase in all lines and, as seems to be the inevitable rule at such times, trade is very dull at the markets and in the retail stores generally. Prices are descending as a natural consequence, and with the warmer weather now in sight improvement in this regard is hardly to be looked for until the Memorial Day hustle begins. For this special occasion the outlook is rather dubious as to supply.

PHILADELPHIA The volume of business in the Philadelphia market is fairly normal. Of course stock is coming in very freely and often in such volume as to swamp the market. Especially is this the case in roses, lily of the valley and one or two other staples. In carnations the situation is not so bad. But prices have weakened and are at present very much in buyers' favor. As Decoration Day approaches a healthier tone will prevail, and it will be wise to arrange for important contracts in advance. Grave doubts are expressed as to the local peony crop being on time. Peonies are about seven days later than last year at this writing. But a few warm days sometimes does wonders. The effect on business generally on account of the cool weather—whatever it may have been in other lines—cannot be said to have been bad for general hor-

How to Make Money Growing Violets. Saltford. Price, 25 cents

Dwarf Fruit Trees. Waugh. Price, 50 cents.

In the hearing before the appropriations committee at Hartford, Ct., on May 8 relative to the additional sum asked for the Connecticut Agricultural College which includes \$50,000 for a horticultural building and greenhouses, the fact was brought out that 90 per cent. of the graduates of the college become farmers, and that the demand for managers and superintendents is greater than the college can supply.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Single man as assistant rose grower on commercial place. Steady position to good man. Give reference from last place and state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED. A good designer, accustomed to waiting on retail flower store trade, industrious and well-recommended. A good position for the right man, Thornton Bros., Lawrence, Mass.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B. care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—A good, smart, handy man accustomed to general greenhouse work. Apply in person or write to Thomas A. Cox, 73 Olney St., Dorchester, Mass.

WANTED—A section man for Roses. Address L. B. Coddington, Murray Hill, N. J.

CUT FLOWER MARKET REPORTS.

(Continued from page 655).

iculture either in cut flowers, seeds, bulbs, trees, or outdoor work. Rather the reverse. More time to attend to things and less excitement.

TWIN CITIES

Business the past week has been very quiet. The trade in general believe this to be entirely due to the bad weather. The big stores seemed to control what little trade there was, and the small trade found it to be a very poor week. Stock is plentiful and were it not for the inclement weather it is very probable there would have been a heavy drop in retail prices owing to the competition of the street merchants. Nothing has been done in planting outside of shrubbery, which has been carried on to quite an extent. A few days the past week it was so cold that even that could not be done as the ground froze hard.

WASHINGTON

It is with a feeling of deep gratitude that we are at length able to report three consecutive days of sunshine for Washington and vicinity. In consequence vegetation has taken a decided jump and all nature seems glad—as well as all people. Two nights of frost during the week just past made all outside growers look pretty blue, but we have reason now to believe that summer is here to stay. Carnations are in abundance as also are sweet peas, but, as yet, the prices have not dropped appreciably. The hardy woodland flowers, such as dogwood, hawthorn and wild cherry, are now almost things of the past, but if the warm days continue pond lilies will be here to take their places. The cherry crop it is thought now will be a total failure, though plums seem to look promising, also apples.

HALF SIZE

Cypress core which is chemically treated against decay.

Galvanized steel U-Bar. Every two feet it is screwed to core.

THAT Core is chemically treated before encasing in the galvanized steel shell—then strong screws are placed every two feet on alternate sides. **U-Bar Greenhouses** are the best greenhouses built because the metal structural members are protected against decay and rust—there's no construction as strong in proportion to its size—none that gives to the plants as much light. Send for catalog. **Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses**, Metropolitan Bldg., 4th Ave. and 23rd Street, New York.

HORTICULTURE

Vol. V.

MAY 25, 1907

No. 21

Engraved by J. H. Wachtel

CARL VON LINNE

"Botanic Muse" who in this latter age
Led by your airy hand the Swedish sage,
Bade his keen eye your secret haunts ex-
plore
On dewy dell, high wood, and winding
shore.

Say on each leaf how tiny Graces dwell;
How laugh the Pleasures in a blossom's
bell;
How insect loves arise on cobweb wings,
Aim their light shafts, and point their
little stings."

—Erasmus Darwin, 1751

Carl von Linne

The twenty-third of May is this year being generally celebrated over the world as the two hundredth anniversary of the birth of a great man,—the Swedish Naturalist Linne or Linnaeus. Greatness is as varied in its manifestations as human interest, thought and action are. It is practically synonymous with high excellence in any line of either. Sometimes it is purely intellectual; sometimes as purely mechanical. It may be as real in one direction as in the other; but its final rank is relative.

Linnaeus was great as an observer, greater in his ability to classify and bring into orderly arrangement numberless disconnected units, and greatest in applying to them differential names instead of leaving them dependent upon differential descriptions whenever they were referred to. He was not the first in his field, but he so systematized it that it was easily cultivable instead of presenting the obstacles of a jungle. Though his system be discarded, his genera and species segregated today, and his own interests in plants replaced in large part by others, his method has furnished a foundation of order on which all plant knowledge must rest if it is to be generally useful.

Wm. Trelease.

Sweden's Great Botanist

Today, the two hundredth anniversary of the birth of Linnaeus is being celebrated not only by the societies of science, the universities, and the colleges of his native land, but by many institutions in foreign countries. Linnaeus was born in the parish of Stenbrohult in the province of Smoland, Sweden. From earliest childhood he showed great love for the productions of Nature and before all for the flowers. In the year 1727 he entered the University of Lund where by his great diligence and the interest which he took in natural studies he won the affection of the distinguished physician and natural philosopher Stobæus. Leaving Lund in the fall of 1728 he set out for Upsala, where, a stranger and unknown, with no resources he struggled against various discouragements and at one time was upon the point of abandoning his studies. At the moment of his greatest need, however, by chance Olaf Celcius, Doctor of Theology and botanist came to his aid, introducing him to his own family and boarding him in his own home. His academic studies now went on pleasantly. At this period Linnaeus' system for the arrangement of plants, his so-called sexual system, was devised. Before he had reached his 25th year the system was elaborated to embrace all known plants and the foundation of his future fame was laid. In a short time his enduring masterpiece, the *Systema Naturæ*, was published. It was this work which afterwards procured for young Linnaeus access to that great physician and natural philosopher, Boerhaave, during his stay in Holland, to

which country he went for his degree of Doctor of Medicine. After dwelling three years in the land of tulips he again returned to Sweden and became a practicing physician in Stockholm. At the death of O. Rudbeck he was called to the Professorship of Medicine and Botany at Upsala. Under his direction studies of natural history got attention as never before. Numbers of young men crowded the lecture halls to listen to his teaching and many among his disciples have their names inscribed in the annals of botany; as Kalm, Thunberg, Osbeck and others.

It is pleasant to see that Linnaeus' merits were fully recognized in his lifetime. He was made a nobleman and adopted the name Carl von Linne and adorned the shield in his coat of arms with a spray of his favorite plant—*Linnaea borealis*.

THE DEBT OF THE PRACTICAL PLANTSMAN

The question has been asked, What do we owe to Linnaeus for the advantages which the professional, practical plantsman enjoys today? The debt of the practical plantsman to Linnaeus is mainly an indirect one, through the influence which scientific botany has had on the practical study and use of plants. Linnaeus systematized botany, and made it easy for a large number of students to study plants on a wide scale. In the impulse which his system gave to taxonomic botany the floras of the whole world were eagerly explored. A vast number of new and interesting forms were discovered, and such of them as were seen to be beautiful or

useful were adopted into cultivation. When botanical societies, museums, and gardens were established, many exotic plants were grown and brought into flower or fruit, and their excellence became known to horticulturists. The old volumes of the Botanical Magazine, the Botanical Register, and other such publications, with their fine old colored plates illustrate how this was, and how scientific botany, under the stimulus which came so largely first of all from Linnæus, brought to the light of public knowledge many most beautiful plants.

Of course it goes almost without saying that every time one uses the botanical name of a plant, he incurs a debt to Linnæus, who devised the method of designating all species by binominal terms. Linnæus saw that in place of the descriptive phrases of irregular length by which plants were known, two words were enough for the name of each plant, one word for the genus, one for the species; as is *Spiræa japonica*, *Ulmus Americana*, *Cattleya labiata*, etc. The whole world follows him in this binominal system of plant-names. More directly practical botany was aided by the travels and the works of the pupils of Linnæus, some of whom are mentioned above, whose names are commemorated in familiar plant-names, as *Kalmia*, *Thunbergia*, etc. But the chief debt to Linnæus of everyone who deals with plants must always be for the great impulse which his clear arrangement of the vegetable kingdom gave to the study of the plant world.

Carl Blomberg

Hydrangea arborescens grandiflora *alba*

Plants of this handsome hydrangea are blooming in the little greenhouse at the Arnold Arboretum, and attract much admiration from all visitors. Mr. Dawson says that these plants were placed in the pit in December and were started in the house in February up to which time they were only dry sticks, this proving that it is unexcelled as an Easter forcing plant with every qualification for great popularity. The flower heads are very large, pure white and entirely lacking the coarseness of *Otaksa* or *Thomas Hogg*. The foliage is light green, smooth, heart-shaped and very effective. Mr. Dawson pronounces it one of the very best introductions, either foreign or American. Prof. C. S. Sargent calls attention to the fact that Asa Grey described this sterile form of *Hydrangea arborescens* as having been found in the mountains of Pennsylvania sixty years ago and it is remarkable that it should have remained in obscurity for so many years. E. G. Hill & Co. have the credit of first bringing it into public notice.

Plants in the Rock Garden

The article in a recent issue of HORTICULTURE on "Alpine flowers in a cold greenhouse" was of great interest to me. When I was at Kew there was no house for alpenes, and during my visits since then I was not fortunate enough to be there to see the house at its best in April and May. It seems to me that the plants and interior of the house would look much better if a small rockery was built in the house. The plants would look much more natural and probably grow much better, too, if grown in a rock. There is a charming rockery out-of-doors at Kew, but the plants do not seem as happy or as thrifty as the alpine plants in the rockery at the Edinburgh Botanic Garden. Probably the Scotch mist which wets an Englishman to the skin agrees well with the mountain jewels or alpine plants.

The past month, April, will be long remembered for its unseasonable weather. Many plants that ought to have blossomed during the month were retarded as safely as if they were kept in cold storage. The principal plants that blossomed during April were crocuses, snowdrops, grape hyacinths, glory of the snow, hepaticas and a few narcissi.

There is probably no part of the garden so interesting in May as the rock garden. The plants have wintered well. The deep coating of snow which covered them mostly all the winter kept them safely and from alternate freezing and thawing. Plants are especially thrifty and promise to give an exceptionally liberal supply of blossoms.

THE ROCK CRESSES

Large masses of the white rock cress (*Arabis albidia*) is most pleasing at this early season. It is an old-fashioned plant but it will be a long time before we are tired of its company. Its white, fragrant flowers are most pleasing when planted in large masses and will do well in almost any soil or situation. Another species that is less known but a gem of rockery plants is *Arabis procurrens*. This plant has a mat of white flowers which stand six or eight inches in height. It is valuable as a foliage plant when destitute of flowers. It makes a thick mat which covers the ground completely with its bright green leaves which are bright and green throughout the whole season.

The purple rock cress that does best with us is *Aubrietia deltoidea*. In elevated positions where water does not lodge about it in winter it will grow well and flower profusely. *Phlox subulata* and its varieties are always at home and happiest in the highest and driest parts of the rock garden and are so showy that they draw attention from a distance. *Euphorbia Myrsinites* although not a showy plant when in bloom is valuable for hanging gracefully over the rocks and its light glaucous-green foliage and stems are quite attractive. It sows itself freely in our garden.

Many of the species of the dog's tooth violets have beautifully marked foliage and would be well worth growing for this attribute alone. At this time they are flowering with the greatest freedom and the European

species *Erythronium dens-canis* and its varieties are especially attractive. Their flowers are of various shades and rise above the foliage about six inches. They are spreading rapidly and will soon cover more space than we can spare them. *Erythronium Americanum* and *E. albidum* grow luxuriantly. They seem to do well either in shade or sunshine. They make an excellent edging for rhododendron beds and love the moist peaty soil.

AN EARLY LATHYRUS

Lathyrus vernus (*Orobis vernus*) is the first of the pea family to blossom. It's surprising that this fine old plant is not more common. It has many good qualities which recommend it as an early-flowering hardy plant. Just as soon as the frost leaves the ground it pushes up its green leaves and very soon the plant is embellished with clusters of purple flowers. When fully grown it is about a foot in height. It is easy to grow and is not fastidious about soil or situation. In full sunshine it seems to be happy, but under the shade of trees it does equally well and its flowers last longer. It seeds freely and can be increased from seed or by division. Skirting the lower edges of some large rocks *Lathyrus palustris* with its pale purple flowers is very pleasing now.

The earliest of the speedwells to blossom is *Veronica gentianoides*. This is a dwarf species only attaining ten to twelve inches in height. It has bright light blue flowers and bright green shining foliage. It is a capital rockery plant and does well where the soil is not too dry.

The rock madwort (*Alyssum saxatile*) loves sunshine and in a partially elevated fully exposed position, it is a mass of shining yellow now. It is one of the best yellow flowers we have at this season. It does not do well with us as a border plant but we have no difficulty with it in the rock garden when grown in positions that are slightly elevated. It is rather hard to transplant, but plants raised from seed and planted in their permanent positions before they are fully grown give the best satisfaction and quickly get established. *Alyssum argenteum* is another species we grow but it is not as showy as the rock madwort. It is perfectly hardy and is pleasing in some positions.

Aster alpinus looks in perfect condition and although not yet in flower is a mass of buds which will speak for themselves later.

A NEW VIOLA

Viola cornuta variety *papilio* is a new kind we raised from seed which came from England last year. This is a good thing and in many ways like the species, but the purple flowers are shaped like a butterfly as the name suggests. *Viola lutea* variety *golden gem* is the finest yellow viola we have grown so far. It is perfectly lovely now. It is also new and the seed was obtained last year from Thompson and Morgan of Ipswich, England. Amongst the new tufted pansies we have raised from seed last year and which are growing finely in the rock garden the following are the best: *Imperial Blue*, *Purple King*, and *Osborne White*. These tufted pansies are profuse blooms and produce quantities of flowers all the summer.

Some of the alpine drabas are lovely and are the smallest plants probably we grow out of doors. In crevices between the rocks we have nursed and cherished *Draba bruniaefolia* for many years and it has rewarded us many times with its show of minute yellow flowers. This is one of the jewels: the whole plant does not measure more than an inch in height. Some scientists tell us that plants have as much of a spread under

ground as they have above ground. It is the reverse with these minute mountain plants. On some of the plants which are not more than an inch in height, the roots travel downwards for about a foot. I have dug Drabas with roots ten and twelve inches long. This is only another example where nature fits plants for their environments. Other species of drabas that are in flower now and all having white blossoms are *Draba contorta*, *Traunsteineri* and *incana*.

POPPIES SHOULD BE RAISED FROM SEED

The Iceland poppy (*Papaver nudicaule*) and its various varieties on elevated spots make a bold show at this time. The plants are not long lived and a batch should be raised from seed each season if the plants do not produce themselves naturally from seed as they often do if they are happy and thrifty and in a situation to their liking. I like the plain old-fashioned nudicaule and its white variety the best, although all the other forms are good for variety's sake. The alpine poppy and its white variety have a better constitution than the Iceland poppy. They are all easily raised from seed and ought to be in every collection of rock garden plants.

Parrya Menziesii is a pretty little cruciferous plant which is new to our garden. It grows six or eight inches high and has racemes of bright purple flowers. I raised a number of plants from seed a year ago and planted them last fall in the rock garden where every one of them lived and they are flowering with the greatest profusion.

A VALUABLE PRIMROSE

Primroses are especially valuable as early spring-flowering plants and the one that draws most attention at this time is a large mass of *Primula denticulata* var. *Cashmeriana*. This is a splendid plant and deserves more prominent popularity than it has at the present time. It is perfectly hardy and when it finds a congenial home it flowers exceedingly free, throwing up just after the frost is out of the ground, flower stems about ten inches in height and almost as thick as my little finger, which are terminated with large umbels of light purple flowers. It will grow on level ground or partly level and is not particular about the texture of the soil. This plant comes true from seed and can be grown easily in this way.

Primula officinalis and *P. Polyantha* and their numerous forms and varieties are all doing well and always have a charm for lovers of early flowering plants.

Fritillaria imperialis is the plant that has made most growth this season out of doors. Its stems are from three to four feet high now and are crowned with umbels of drooping brick-colored flowers. *Fritillaria Meleagris* and its varieties are also curious and interesting. Other species that are in bloom now are *F. tenella* and *ruthenica*.

EDELWEISS

The Edelweiss (*Leontopodium alpinum*) is perfectly hardy here, and we have a colony of it about a yard long by a foot in breadth. Although not in bloom now it is always interesting to lovers of alpine plants. We hear rumors often that the plants will be exterminated by tourists in its native country. There need be no fear of this as long as a few seeds can be procured as there is no plant easier to grow from seed than the Edelweiss.

Organization again wins

The success of the Illinois State Florists' Association in securing from the legislature an appropriation for floricultural investigations at the State Experiment Station is another demonstration of the effectiveness of organized effort. More or less directly every florist in the State benefits from this exploit. Let us hope for the day to come when it will be a stigma and disgrace to any florist or gardener to abstain from affiliation with one or more of the local or national associations devoted to the interests of his calling.

Memorial Day

Another year has gone its round and once more we find ourselves on the threshold of the great spring holiday, the representative floral festival of our day. No event in the course of the year has a deeper significance and none touches more closely the heart and sentiment of

the people than Memorial Day with its impressive observance. Originally consecrated to the decoration of the graves of departed heroes of the battlefield, now universally appropriated by the people as a day of loving and tender tribute to the memory of friend and kin who have gone beyond, the occasion is one in which the florist must for all time take a leading part. Whatever the changes may be in the observance of other annually recurring holidays, here is one which will always continue to be distinctly floral in its character. Rich and poor alike will turn to the florist on Memorial Day and there will be no flower so rare and costly and none so cheap and common but that it will find an appreciative purchaser.

An opening that should not be dispised

In all the work that is being undertaken for civic betterment and public enlightenment in the art of home adornment the local florist who does not actively participate makes a serious mistake. One can hardly blame a self-respecting florist for holding aloof from some of the hysterical "Back-yard Beautiful" missions, managed by persons lacking all qualification for such work but, as a rule, the florist will find people more than willing to be advised by him and, in taking a prominent part in the public education by working to stimulate a love for flowers, a knowledge of their culture and a general interest in garden work, he not only raises himself in the esteem and respect of his townsmen but also lays the foundation for the substantial advancement of his material welfare through the larger demand for his products which is certain to follow such a course. It is to be regretted that there are many who are blind to the splendid opening thus offered and who stupidly resist every inducement put forth to pry them out of the old, old rut.

The hardy chrysanthemums

Writers on garden topics in the daily press are showing a disposition to encourage a more general interest in the hardy pompon chrysanthemum, and the trade growers of these plants assert that the increased demand indicates that the amateur is coming to a realization of the many unique good qualities possessed by these sturdy old-fashioned favorites. Since the introduction of the huge-flowered Japanese varieties the hardy chrysanthemums have been neglected by trade and amateur until it may now be truthfully said that many of the present generation are unaware that they exist. We believe that every local florist would find his patrons eager to take up the interest in and cultivation of this class of chrysanthemums if its ease of culture, its variety of color and its fine effect in the late fall garden were brought to their attention. In comparatively few of the retail greenhouses can it be found, however, although there is as good profit in its propagation and sale as in any of the many other soft-wooded plants that they consider indispensable in their assortment for spring sales. A few of the large wholesale dealers throughout the country have been getting together fine collections comprising a wide range of color and the local florist who invests in same will be making no mistake. Unfortunately the pompon chrysanthemums are always seen at a great disadvantage in most flower shows. Crowded in untidy handfulls into small vases or bottles and elbowed by the huge blooms of the greenhouse product they appear of small account. We should like to see a really artistic display of these small-flowered varieties made at each exhibition next fall, shown on long sprays arranged for decorative effect, and in a section distinctly by themselves. This done, the public will quickly take notice.

AFTER ADJOURNMENT.

"A flower famine exists here, it being impossible to get flowers for use at funerals."—*Elwood Ind., Notes in Indiana News.*

Our Chicago wholesale friends should get in touch with Elwood at once. It's a cinch.

Are you a member of the S. A. F., or the local florists' or gardeners' club, or the local horticultural society? If not connected with one or all of these, why have you neglected it? If you "cannot afford it" you are to be pitied; if you "don't care about it" you ought to be ashamed to acknowledge it.

"A drop of alcohol or camphor put on each mealy bug will soon kill it."

Horticulturists generally will be exceedingly grateful to the Philadelphia Press which in its issue of May 19 imparts this welcome information. If, by accident, the drop of alcohol should get in the mealy bug instead of on it, wonder what would happen.

The notorious brown-tail moth has selected a shining mark for the first dose of brown-tail itch, for this season, no less a personage than the moth's arch-enemy Superintendent Pettigrew of the Boston Park Department. Mr. Pettigrew is actively preparing dire vengeance in the shape of arsenic spray and the fight will soon be on in earnest. In the meantime the superintendent's neck is as rough as a corduroy road and the moth gets the credit for the first blow.

The gypsy moths have emerged from the eggs, and the tiny caterpillars are already busy at work on the green material nearest to the spot of their birth. Despite the most careful inspection and destruction of egg masses throughout the winter season, there appear to have been plenty that escaped detection. Spraying is the only recourse now, and as soon as the foliage is of a sufficient size to hold the poison it should be applied promptly and thoroughly. When the caterpillars get large, poison is only a tonic for them.

Our readers are reminded of the great privilege at their disposal, of the use of the Massachusetts Horticultural Society's library on Sunday afternoons. Gardeners have made some use of the privilege but have not taken advantage of it as a rendezvous thus far to the extent that they should. Visitors in Boston connected with florist or gardening profession if in the city on Sunday should call at the library, Horticultural Hall, cor. Massachusetts and Huntington avenues, and they will find much to interest and entertain them.

The brown, brown woods of March
Are the green, green woods of May;
And they lift their arms with a freer swing
And shake out their pennons gay.
And the brown, dead world of March,
Is the living world of today;
Life throbs and flushes and flashes out
In the color and fragrance of May

The grass comes, the flower laughs, where
Lately lay the snow,
O'er the breezy hill top hoarsely calls the
crow.

By the flowing river the alder catkins swing
And the sweet song sparrow cries, "Spring,
It is Spring."

RHODODENDRON LADY ALICE FITZWILLIAM.

The superb specimen greenhouse rhododendron herewith illustrated was exhibited on April 20th, at Horticultural Hall, Boston, by Wm. C. Rust, gardener to Dr. C. G. Weld. It is one of the handsomest of the Indian

rhododendrons. The flowers are of immense size, waxy white with pink-tinted stamens, and very fragrant. The specimen here shown bore several hundred flowers and a silver medal was awarded for it by the Massachusetts Horticultural Society.

AN APPRECIATED APPRECIATION.

Editor of HORTICULTURE:

Your editorial in the last issue is just what we all need to keep alive this great question of protection for our birds, our forests and in fact all the life of the country. It is largely due to the destruction of our native song and insectivorous birds that this rapid increase of the gypsy and brown tail moth was and is made possible; you will probably notice that these pests are most numerous about places where there has been a great deal of contract and Italian labor used; and if you will follow the subject further you will find that these laborers are in the habit of trapping the birds and using them for food. I know of cases where Italian camps were raided and large numbers of our insect eating birds were found.

I believe that the average man does not understand what all this destruction of the birds and forests means and while your paper is published in the interests of horticulture a word to our readers on some such vital topic once in a while will be greatly appreciated. Your paper is doing a good work and I for one like to see you take up a subject that is of vital importance not only to the horticulturist but to all our people.

Thanking you I remain,

Very truly,

WILFRID WHEELER.

Concord, Mass.

PERSONAL.

Miss Stella Tonner and Mr. Leslie Ellithorpe were married at Chicago on May 11.

Robert Newcomb, formerly of Chicago, has taken a position in the new floral store of Clarke Bros., at Oakland, Cal.

R. B. Graves, the veteran florist of Northampton, Mass., is actively attending to his work as usual this spring although 87 years of age.

S. S. Skidelsky was a visitor in Boston last week. This week we have Geo. F. Struck representing Lager & Hurrell, Summit, N. J., and Thos. Knight from Julius Roehrs Co., Ruthersford, N. J.

We have heard from Mr. Samuel Henshaw who is dangerously ill at the S. R. Smith Infirmary, New Brighton, Staten Island, that he is holding his own well and is hopeful of speedy recovery. Pluck is the very best of medicine and Mr. Henshaw has plenty of it.

You'll find something worth reading on every page of this paper.

NEWS OF THE CLUBS AND SOCIETIES

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The meeting of the Gardeners' and Florists' Club on Tuesday evening, May 21, was the equal of any of its predecessors in point of numbers and interest, there being close to 150 members present. The exhibition table carried several contributions from members, among which were carnation Alma Ward from Peter Fisher, "Daphne cneorum" from President Westwood, *Gladiolus nanus* Peach Blossom from R. & J. Farquhar & Co., *Trollius Japonica* Excelsior from Blue Hill Nurseries, rose White Killarney from Alex. Montgomery, *Palmetto* asparagus from Wilfrid Wheeler, and a thistle with pretty green and white mottled leaves from George M. Anderson. A report of merit was given for the *trollius*, honorable mention for the *gladiolus* and White Killarney, and a vote of thanks was prescribed for the remainder. Mr. Farquhar said that many stocks of *trollius* are badly mixed as to color, and that it is difficult to procure the pure strain of *Excelsior*. The flowers shown by Blue Hill Nurseries were of very deep rich color. Peach Blossom is one of the best of the early forcing type of *gladiolus*. Peter Fisher stated that he had been much pleased with Alma Ward this season and believed that by selection of the stock to be planted he could even improve on its record the coming year.

W. H. Elliott was called upon to tell his experience in "carrying over" Richmond roses for a second year. He stated that results might differ according to conditions—such as benches or solid beds—and that this should be taken into consideration in construing what he might say. He had carried over one bench until the present time. The plants had been kept flowering until July, when they were dried off, and cut back to eight or ten inches about September 1 and started into growth again. Results were directly the reverse of what he expected, for he got no stems over one foot long at Christmas when he expected the best crop of large flowers would be produced. Then in the spring, when he looked for small flowers, he got a fine crop of extra large flowers. Next year he would not cut back so severely.

W. N. Craig read a very interesting paper on the planting and massing of bulbous plants, F. J. Rea followed with a valuable talk on the planting of hardy perennials, and T. H. Westwood read an instructive essay on the use of tender bedding plants. We hope to present these papers in an early issue of HORTICULTURE.

A vote of thanks was passed for the donors of flowers for the tables on ladies' night. It was voted that the club hold the usual picnic the coming summer.

COLUMBUS FLORISTS' CLUB.

The first regular meeting for May was held last Tuesday evening, and not for a long time have so many mem-

bers attended; a goodly number of ladies were also present; in fact, had it been a stated ladies' night our club could hardly have been more favored. President Sherman F. Stephens was in the chair, and all the other officers were with us. The plants and flowers exhibited at this meeting were very much enjoyed; and Messrs. Jacob Reichert, Albert Hills, William F. Metzmaier, Charles Fuehler, and John Brush were made committee on awards. Besides a point award of 15 points, Mrs. John Williams was given honorable mention for Tarrytown fern; I. D. Siebert for *Pandanus utilis* received 15 points; and 20 points went to John Williams for a pot-grown Bridesmaid rose in bloom. The committee were especially pleased with this last exhibit. President Stephens opened a very interesting discussion, on the home and school gardening problem; in which Messrs. Faxon, Batelle, and others joined. Mr. Stephens told of the good work one of our largest schools is doing; in fact, the boys there are so much interested in the garden, which is a large one, that they work after school hours until dark, planting and arranging it. M. B. Faxon also reported, that in connection with the Columbus Federation of Women's Clubs, more than three thousand pupils had already been supplied with vegetable and flower seeds. James McKellar for the field-day committee reported, that even thus early a great deal of interest was being manifested in the forthcoming picnic; and that there would without doubt be two cars needed to carry all to Buckeye Lake. The date for the outing has not yet been fixed, but will most probably be in July; as last year, there will be sports of all kinds, with suitable prizes. As our next meeting would come before Memorial Day, it was postponed to Monday evening, June 3rd, when the club has been invited to meet at the greenhouses of the Fifth Avenue Floral Company. During the evening the ladies present both sang, and furnished music on the piano.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting on May 17, President McGregor in the chair. W. E. Allen, gardener to Mrs. Scott Fitz, showed a vase of exceptionally good Enchantress carnations and was awarded a certificate for superior culture. James Salter showed six pots of Miss Lingard phlox, a vase of Phlox Drummondii and two vases of White Column stocks, receiving a certificate of merit for the same.

B. Hammond Tracy of Cedar Acres, Wenham, gave an interesting lecture on *Gladioli*. He described the characteristics of the various strains; the different methods of propagation, cultivation, and soils most suitable for successful *gladiolus* growing. The cup offered by Julius Huerlin of the Blue Hill Nurseries for the best collection of herbaceous perennials will be competed for at the June show, and not at the August show as printed in the schedule of this society.

WILLIAM TILL.

MASSACHUSETTS HORTICULTURAL SOCIETY.

Though not a regular exhibition day at Horticultural Hall, Saturday, May 18, there was brought in a noteworthy display of spring flowering plants. Chief among the exhibits was a magnificent collection of eighty-one named varieties of tulips, single and double, from the establishment of R. & J. Farquhar & Co. Hardly less interesting were the displays of bulbous plants, pelargoniums, carnations, and orchids from William Whitman of Brookline (Martin Sullivan, gardener), and of eighty varieties of hardy flowering plants from the Harvard Botanic Garden by Robert Cameron, superintendent. Julius Huerlin of the Blue Hill Nurseries also brought in a large collection of fifty species and varieties of herbaceous plants, and Mrs. E. M. Gill of Medford exhibited a choice assortment of carnations, sweet peas, stocks, and tulips.

The exhibition was of so much interest that the committee decided to keep it open the following Sunday.

The next exhibition will be the Annual Rhododendron Show on Saturday, June 8. Much interest is already manifest in the circular announcing the additional special prizes offered for the Chrysanthemum Show in November. Copies of this list can be obtained on application to the Secretary at Horticultural Hall, Boston.

WM. P. RICH, Secretary.

Boston, May 18, 1907.

NEWPORT HORTICULTURAL SOCIETY.

A meeting of the Newport Horticultural Society was held in the Society's hall on May 14. The executive committee reported having approved of the action of the president in the matter of the appointment of Alexander MacLellan, John T. Allen and Daniel Coughlan judges for the Society's June exhibition. The long drawn out work of the committee appointed at the annual meeting in December to secure contributions towards the proposed memorial to the late congressman Adams was completed by the announcement of Col. McMahon that the collection of contributions had ceased and that the amount on hand together with a contribution from the Society would forthwith be sent to Professor Wheeler at Kingston. The Society has had a committee at work for some time in a preliminary movement for securing special premiums for the coming exhibition; this committee reported progress.

Several members present at the meeting spoke in complimentary terms of the diligent work of the men who visited Newport recently in the interest of the movement for the prevention and destruction of the gypsy moth. The president has asked Mr. Herbert W. Lull, superintendent of schools, to assist in the judging of school gardens, and he has willingly consented to act in that capacity.

D. M.

DECORATION DAY FLOWERS

An immense supply of lilies, carnations, roses, lilacs, stocks, spiraea, etc., especially growing for this purpose. Also, baskets, wire frames, inscriptions, immortelles, wild ferns and other green material. All at Lowest Wholesale Prices.

THE OUTDOOR SUPPLY

will be scanty this year and the Greenhouse Crop will be in Unprecedented Demand.

WE CAN SUPPLY YOU

and at

Lowest Wholesale Prices

BUT WE WANT TO KNOW YOUR WANTS EARLY

N. F. MCCARTHY & CO., 84 Hawley St., Boston, Mass.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

At the meeting of this society held on May 13 the final steps in incorporation were taken. A board of ten directors takes the place of the executive committee. Officers were elected as follows: President, Thomas W. Head; vice-pres., Rev. Nelson Poe Carey; sec., A. A. Hunt; treas., R. R. Willcox; librarian, John Archer. President Head then gave an interesting talk upon Herbaceous Perennials.

CLUB AND SOCIETY NOTES.

The Tri-City Florists' Club will hold its annual picnic on July 11 at Black Hawk's Watch Tower. H. Bryant, H. Goethje and J. Staak are the committee in charge.

August Poehlmann, Leonard Kill and Philip Schupp have been appointed by the Chicago Florists' Club to arrange for the meeting and exhibition of the American Rose Society at Chicago next March.

The June meeting of the State Florists' Association of Indiana will be held at the Smith & Young greenhouses, Stratford. The annual picnic of the Association will be held at Willowmere.

The date for the great flower show to be held at Convention Hall, Buffalo, under the auspices of the Horticultural Society of Buffalo will be Nov. 10 to 17, 1907. The premium list provides for \$1700 in cash prizes.

The International Conference on

Plant Hardiness and Acclimatization to be held by the Horticultural Society of New York will take place Sept. 30th and Oct. 1st and 2d in the rooms of the American Institute and the Museum Building of the New York Botanical Garden. The second day, October 1st, will be devoted to some form of pleasure, possibly an excursion to some place of interest in the neighborhood. A preliminary program will soon be issued.

The next Provincial Horticultural Exhibition will be held on November 12 to 16, at Toronto, Ont. It is probable that the exhibits will include spraying machinery and devices used in the handling of fruits and flowers. Officers have been elected as follows: Pres., R. J. Score, Toronto; vice-pres., W. H. Bunting, H. R. Frankland; secy., H. B. Cowan; treas., J. H. Dunlop. The government grant to the exhibition will be \$2000, instead of \$1200 as last year.

OBITUARY.

E. A. Bronson, formerly in the nursery business at Geneva, N. Y., died on May 4, aged 81 years.

Charles McLaughlin, for many years engaged in the florist business at Haverhill, Mass., died suddenly on May 3.

George H. Green died at his home in Everett, Mass., on May 15. He was a man of good personal character and universally liked. He leaves a widow.

MASSACHUSETTS AGRICULTURAL COLLEGE.

Summer School of Agriculture.

The talk about teaching agriculture in the schools has been revived in many quarters by the announcement that the Massachusetts Agricultural College will this year hold a special school of instruction for teachers in order to show them how such subjects as gardening, botany and insect life may be used to good advantage in common school work. This summer school opens in Amherst, July 8, 1907, and will continue four weeks. A very strong corps of teachers has been engaged and preparations have been made on a large scale for thorough work. In view of the fact that teachers are generally paid sinfully low salaries the charges for this school have been made very low. It will be an excellent opportunity for ambitious teachers, and it is gratifying to learn that a considerable number have already registered.

THE MOTH FIGHT.

During the season just ended there have been employed by Supt. Kirkland in the campaign against the gypsy moth in Massachusetts about 1700 men. When it is considered that each city and town has also had its local gang at work and many thousands of private parties have attended to the clearing of their own property, the magnitude of the work in this moth fighting becomes apparent.

THE IRIS.

(Read Before the Massachusetts Horticultural Society by J. Woodward Manning.)

(Continued from page 621)

The Dwarf German Irises.

We now arrive at a point where it is impossible to make a distinct horticultural line between classes based on botanical classification, but by dividing the remaining classes and groups into those with and without surface rhizomes it is possible to make a form of subdivision.

The surface rhizomed forms are more popularly known as German Irises, though the true *Iris Germanica* is but one of many species. The dwarf forms are greatly neglected, being but seldom seen in American gardens, yet possessing great merit in their range of bloom and the earliness of flowering period. *Iris pumilla* is better known than the other species, and growing about nine inches high bears in April showy flowers of deep purple in profusion. As an edging plant it has much merit, and there are various selected varieties ranging from pearly white, through clear blues to the deeper colored typical form. *Iris pumilla* is certainly worthy of far greater use than has been the case in the past. *I. verna*, another dwarf species from the Carolinas, is equally dwarf, quite prolific in bloom with purple shades and blooms about the same time. This does not show the improvement and fixed forms, however, that is true with the last species. The gem among dwarf Irises, however, is the crested *Iris cristata*, only growing about six inches high, with light green foliage. It forms a carpet of verdure and bears freely of light blue flowers beautifully blotched with golden yellow. I know no form of dwarf Iris with as great adaptability of uses as this, either for naturalizing or for varied garden usage.

Commonly confounded with *Iris pumilla* is a form with flowers borne singly on the stalk, somewhat broader leaves. This is *Iris Chamaeiris*, or its variety *Olbienensis* or *Italica*. The type bears yellow flowers with the falls veined with purple.

Another small and showy dwarf species known as *Iris flavissima* or *Bloudovii*, a native of Siberia, bears showy pure yellow flowers. While there are a number of other dwarf species, they have no particular horticultural merit over these.

New Races and Crossings.

Intermediate between these dwarf Iris and the taller growing German Iris has appeared a new race within a few years under the name of Alpine Iris, these being produced by Mr. W. J. Caparne of Rohais, Guernsey. These are the result of crossing many of the dwarf species with taller growing kinds; the progeny vary in stature and are claimed to give flowers over a period of six to nine months. Probably, however, this refers to a collection of hybrids rather than any single variety. Undoubtedly they have much of interest, and trial will eventually prove such merit and distinction as they may possess.

For perfect hardihood, freedom of bloom and range of color we can with the dwarf and taller growing German Irises feel quite independent of the more difficult forms, however. The German Iris, as popularly known, va-

ries in growth in the varied forms from fifteen to forty inches. The earlier varieties commence blooming in early May, and by a careful selection of kinds it is possible to keep up a succession of flowers until late June.

Many species are responsible for the beauty of the class, and their crossing and selection have confused their origin. *Iris variegata* shows its influence in the prevailing yellow color of the standards of the following varieties with the rather remarkable exception of the *Innocenza*, a very fine form, pure white throughout. *Beaconsfield*, standards yellow, falls crimson, edged with primrose; *Gracchus*, standards yellow, falls crimson reticulated with white; *Maori King*, standards yellow, falls rich velvety crimson margined with gold; *Sans Souci*, standards yellow, falls yellow, reticulated with crimson brown; and *Regina*, standards yellow, falls white, conspicuously veined lilac and edged with primrose yellow.

Iris sambucina crossed with *I. pallida* has given us the very beautiful variety *Madam Chereau*, while the cross between variegata and *sambucina* produces *Iris neglecta* by selection from which we have *Clarissima* with lavender standards and falls reticulated with crimson purple on a white ground. *Cythere*, standards lavender blue, falls clear blue. *Florence Barr*, with both falls and standards bluish, with rosy lilac tinge, and *Mons de Sible*, with lilac standards and deep crimson purple falls.

Other Beautiful Forms.

Some beautiful forms are embraced under the doubtful species *hybrida*, all with white standards, of which *Duc de Nemours*, with purple edged white falls, *George Thorbeck*, falls rich violet purple veined with white at base, *Mrs. George Darwin*, falls white, the upper part veined with gold and violet, are among the best.

The species *Iris Germanica* is undoubtedly more common than any other type, particularly in the older gardens. In this purple is the predominating color, of which *Purple King* and *Black Prince* are the best representatives.

Iris Florentina, the orris root of commerce, is one of the most popular, and very deservedly so, for over a hundred years it has occupied a conspicuous position in every large New England garden, and during the period has lost none of its popularity. Free blooming, with flowers of pearly whiteness, it annually leads the way to the charms of the early summer garden flowers. There are three forms, the common type just described, the variety *Albicans*, of a purer white, and *Princess of Wales*, even more floriferous, with slightly longer flowers and the most deliciously fragrant of any German Iris.

The crowning beauty of all German Irises is traceable to the blood of *Iris pallida*, the broadest leaved of all, with its sword-like foliage often attaining a height of two and one-half feet and an inch and a half across the blade. The flowers are borne on long stems bearing these flowers well above the foliage, altogether producing a most charming effect. The variety *Dalmatica*, or sometimes known as *Princess Beatrice* and occasionally in this country as *Madam Almyra*, is the finest, with immense flowers of a rich laven-

der blue and with a charming though subtle fragrance. *Delicata* is of weaker growth with falls lavender, shading to white and French gray standards. Hybridizing has not improved this species, as seen in the variety *Queen of May*, which, while beautiful, with its soft, rosy lilac, almost pink flowers, is a comparatively weak grower, though floriferous. The beautiful cross of the species with *Iris sambucina* shown in the variety *Madam Chereau* is an exception, however, and this is a most delightful flower, with its pure white petals richly feathered with lilac.

The varieties of German Iris mentioned are but a fraction of those that can be purchased from horticultural sources; they represent, however, the best, and among them are varieties far advanced in horticultural merit over many of the more common varieties seen. Of clear yellow German Irises we have two species, *flavescens* and *aurea*; both are good, the former attaining a height of three feet, with lemon yellow flowers, and the latter of dwarfer growth, with rich golden yellow flowers.

Cultivation of the Surface Rhizomed Forms.

All of these Irises with surface rhizomes are of the easiest cultivation, thriving in ordinary garden soils, requiring subdivision and replanting in re-enriched soils as their clumps become large or the soil becomes exhausted. This replanting should be done as soon as the foliage shows signs of ripening and must not be delayed so long that they may not become thoroughly re-established in the soil before winter. In planting it is better not to sink the rhizomes over an inch below the surface unless the situation is naturally a very dry one. As the plants become established, the rhizome soon assumes its proper elevation. Until of late few diseases troubled this class. Unfortunately, however, a seemingly microbic rot is found to affect the roots so that the foliage becomes detached from the rhizome. The disease is little understood and no remedy has been proved effective, though it is quite possible that over richness of soil may serve to foster the disease.

The *Jacob's Sword* (*Iris Pseud-accurus*) occupies an intermediate position, never being classed as a German iris. It is a beautiful plant to associate along water courses, and yet will thrive admirably in ordinary garden soils; with ample dark-green foliage it makes a vigorous and healthy clump and bears abundantly of rich golden yellow flowers with a conspicuous orange zone on the base of the falls. Two types are common, one with narrower petals than the other. The *Gladwin*, or *Roast-Beef plant* (*Iris foetidissima*), while pale blue in its typical form, in its variety *citrina* is of a clear yellow, but the main interest in this centres in the ornamental effect of the bursting seedpods within which the fleshy bright orange-colored seed show to advantage.

Irises with Tufted Roots.

Those Irises with so-called tufted roots are represented familiarly by the Siberian and Japanese classes. The Siberian has a number of distinct forms of which the type forms a tall leafy plant four to five feet high with

NEPHROLEPIS

Piersoni Elegantissima

The Tarrytown Fern

A good stock in all sizes on hand at all times. A splendid seller and money-maker. Large specimen plants, ready for immediate sale: 6-inch at 75c and \$1.00 each; 8-inch at \$1.50 and \$2.00 each; 10-inch at \$3.00 each; 12-inch at \$5.00 each; 14-inch at \$7.50 each; 16-inch at \$10.00 each. Also fine young stock for growing on, 2¼-inch at \$8.00 per hundred.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

many flowering stalks bearing from three to five flowers to a stem, and with dark blue coloring marked with white pencilings. The two most useful forms, however, are the pure white variety, which grows about two feet high, bearing purest white flowers in small clusters, an admirable plant for any flower border, and the variety *Orientalis*, with broad, short foliage, growing to a height of eighteen inches, and bearing with wonderful profusion flowers of the richest blue, with faint white throat markings. There is no better true blue in the iris family than this. It too is one of the few irises which will bloom a second time, though sparingly; it is true, by cutting down after the flowering period. This can hardly be recommended, however. No iris reproduces itself any faster than this. It quickly forms broad colonies and necessarily requires frequent division and transplanting.

Japanese Irises.

Japanese irises comprise perhaps the par excellence of the family; they are much misunderstood and require more judgment in their cultivation than do German irises. If planted in situations where water will not collect about the crowns in winter they are perfectly hardy. To flood them at the flowering period is an advantage, not a necessity. This need is nearly as fully met by thorough mulching to retain all possible soil moisture during the flowering period, and with artificial watering is far safer than to plant in a moist situation. It is a false impression that the Japanese plant them where they are subject to excesses of moisture in winter. During this period the Japanese iris fields are drained. All Japanese irises are seemingly improved and selected varieties, rather than hybrids. Their range of color is a very ample one, but has decided limitations. Aside from the variety of self colors and their combinations in flaking and veining, together with the single and semi-double forms, nothing can be expected. A dozen distinct sorts represent the class far better than a large collection of varieties whose distinction is more dependent

on their labels than on any visual evidence of variety. Probably no class of plants have been more cruelly foisted on the public as new than these, by means of fanciful names in which Japanese terms have been used as indicative of new sorts.

It is highly improbable that any distinctive improvement of the class has resulted in comparison with the first sets of varieties shown in our halls twenty years ago. The following list is probably no better than others that could be named, but possesses distinction in the sorts quoted: Arthur Silbard, double, white, shaded with violet; Blue Jay, single, clear blue, spotted with white; Calypso, double, lilac, richly veined with purple; Dagmar Georgeson, rich royal purple, single; Goliath, double, white, marked with violet; Emperor of Japan, double, velvety maroon; Gold Bound, double, white, margined with gold; Painted Lady, single, white, veined with claret.

The wonderful size of the flowers of the Japanese Iris, their late period of bloom carrying on the flower effect to early August, renders the class indispensable to every flower garden. Their massing in groups of a single variety, rather than in promiscuous clashing of colors is, however, essential for the most artistic effects.

WHOLESOME CHESTNUTS.

Dahlia tubers should now be planted out in the open ground and when the work is underway it is better to do it right and be reasonably sure of good results than to do it imperfectly with the certainty of poor returns. Dahlias like plenty of room, three feet between the rows and plants. The soil should have been thoroughly dug and broken up and enriched with manure before digging the holes for the tubers. A grower of dahlias will be well rewarded if he keeps the soil thoroughly cultivated right through the season. Plants from green cuttings may be put in the soil out-doors just as soon as they are sufficiently hardened to stand it.

The bedding of plants of various kinds will soon be under way. There is very often too much haste asso-

ciated with this important work. Some are in a hurry to get the plants out of the way and in the ground with the result that sometimes many plants are a long time in amounting to anything. Others again while actually engaged in the operation are in such haste that many plants are planted imperfectly. It pays to wait and take time in these cases.

Notwithstanding that orders may so far be few for bedding plants, indications point to a scarcity of good stock, and before the planting season is nearly over it will without doubt be felt generally.

Poor plants are not desirable at any time but when unfortunately a number is on hand they can be sold at lower prices than that asked for good plants. They should be disposed of in that way, but they should never be mixed in with choice plants and shipped to a customer who pays for good stock.

The rush in quest of the dollar within reach should not detract attention at the present time from staple articles which if given the care they deserve will amply repay for the trouble later on. I refer chiefly to cyclamens and poinsettias. I have noticed very frequently that these suffered considerably from neglect at this time of the year and that just for the reason noted above. Poinsettias should now be awakened and refreshed still further at the roots by cutting back reasonably, and repotted in order to encourage the making of good material for cuttings. They require a gentle heat and water at the root and applications to the foliage by syringing frequently.

Cyclamens, when well grown, are always good sellers, but small or otherwise poor or indifferent stock are hard to get rid of at any price. Then for that reason it is surely evident that it is folly to have them take up valuable room if every effort is not made to grow to perfection.

The first excursion of the Department of Botany of the Brooklyn Institute was held last Saturday at the greenhouses of C. W. Ward, Queens, N. Y. The visitors were received with characteristic hospitality.

SEED TRADE

Contrary to early reports, it transpired that comparatively little planting has been done in the line of general crops east of the Rockies. It is only within the past ten days that peas have been planted by the packers on an extended scale. As early as April farmers in Western New York, and particularly in the vicinity of Buffalo, planted peas. The hardy varieties like Alaskas and First and Best have managed to poke their noses through the grounds, but Telephones, Gradus and kindred sorts are still in a state of "innocuous desuetude" and likely to remain so indefinitely. As the percentage of hardy early peas planted is very small at any time, the failure of the large-podded wrinkled varieties is very serious, as seed of these varieties is practically exhausted, and not procurable in quantities at any price.

The attention of the writer was called to a sowing of Alaskas and Admirals made on the same day and in the same field, showing that while the Alaskas had germinated well, making a good stand, the Admirals had come up very sparingly, and the seed of the latter was pronounced faulty in vitality. The same fault was found by those who had planted the Telephones, Gradus, Duke of Albany and Thomas Laxton. Had the seed been planted in a snow bank the same criticism would have been heard, and coming from farmers who have been growing peas for years, shows the complaints to be essentially dishonest.

Though it is so early that any opinion is nothing but a guess, yet the feeling is general that we are booked for another short pea crop, and this is especially the view of the canners. No opinion is expressed by the writer, as guesses are of no particular value. As soon as there are developments on which to base an opinion, the readers of HORTICULTURE will get it.

It is time that sugar corn was planted, but neither the soil nor the weather offer any encouragement, and under the most favorable conditions it will be ten days before it will be safe to plant. The same may be said of cucumbers, melons and other vine seeds.

From floods to drought is a far cry, yet California has suffered from both this year. As expressed by a prominent California seed grower in a recent letter, "not a drop has fallen since it quit coming down in floods. We have plowed up the lands ruined by the rain, and just now need a little moisture to work down the roughness for planting, otherwise it must stand over until next year. One piece of our best land is covered with wild mustard twelve feet high, and so thick teams can't get through it."

Another grower complains of the scarcity of farm labor. He says: "The agitation started by the labor unions has resulted in stopping the Japanese from coming over, and we are up against it. The union man

will only work in the cities where he can get from \$3.00 to \$10.00 per day according to the character and quality of his work, and will work only eight hours. Such pay and hours are of course impossible for us, but even if we could and would grant them, these fellows would not work on the ranches. Between the scarcity of labor and the continuous rains up to the middle of March, it has been impossible to keep the weeds down, and they are three feet high. Mildew has started on the onions left from the floods, and what the end will be no one knows."

A pertinent question for every seedsman now is: "What shall the harvest be?" One result of the floods and the succeeding drought, has been an enormous reduction in the acreage of sugar beets. The sugar trust will please take notice. As "captains of industry," now is your chance for an advance of twenty-five per cent. in the price of sugar. It is to be hoped that the "pernicious" activity of the President will not interfere with this "legitimate" advance.

Rates assured by the Hotel Astor, selected as headquarters for the ensuing Seedsmen's Convention in New York City, are as follows: Single rate without bath, \$2.00 and up per day; with bath, \$3.00 and \$4.00. For two persons without bath, \$4.00 per day; with bath from \$5.00 to \$7.00, according to location and size of rooms.

Local retail trade in seeds continues slow everywhere, but indications are that it will last into June, and may finally prove less disappointing than seemed probable a few weeks ago. The early promise of a bumper year cannot possibly be realized, however.

Not much cheer comes from California, the most recent advices indicating a heavy shortage in carrot seed, lettuce, parsnip and other biennials, while no material change can be noted in respect to onion seed.

Henry Field, Shenandoah, Ia., has incorporated his business, with capitalization of \$80,000, and will erect a large fire-proof seed warehouse.

Adolph Kruhm, formerly of Philadelphia, has taken a position in the retail department of Barteldes & Co., Lawrence, Kans.

MOVEMENTS OF GARDENERS.

I. W. Bagge, late of Golden Gate Park, San Francisco, takes charge of the De Sabla estate, San Mateo, Cal.

J. Bell has succeeded J. Donald as head gardener to Professor Osborne at Castle Rock, Garrison, N. Y. Mr. Donald is at present in Scotland.

SEND COPY EARLY.

Memorial Day comes this year on Thursday, HORTICULTURE'S regular publication day. On this account we shall go to press on Wednesday and copy for reading columns or advertising must reach us Tuesday, or not later than Wednesday morning to insure insertion.

Primula floribunda grandiflora		
	(Buttercup)	50c
	Forbesii (Baby Primrose)	25c
	Kewensis (Giant yellow)	Buttercup \$1.00

This charming addition to our greenhouse Primroses originated at the Royal Gardens, Kew, as an accidental cross between the small, but bright-flowered Himalayan species, *P. FLORIBUNDA*, and the sweet-scented *P. VERTICILLATA*, a native of Arabia. The plant is a strong grower, with bright green leaves, and numerous erect flower-scapes, 10 to 18 inches in height producing flowers in whorls at intervals along their whole length. The flowers are fragrant, bright yellow in color, with a slender tube and spreading limb, nearly an inch in diameter. As a winter-flowering decorative plant it is an acquisition; its floriferousness when in a very small state is remarkable.

ARTHUR T. BODDINGTON

342 W. 14th St., N. Y.

FIELD CROP PROSPECTS.

There has been no change in weather conditions during the past week. It continues cold with frosts nearly every night, and only hardy crops can be planted, those that can withstand the cold weather and even a little real frost. Potatoes are lying dormant where planted, or are rotting in the cold, wet ground, and much replanting will be necessary. The few who have ventured to put out tomato plants have labored in vain, as all have been killed, and even when protected by glass, unless aided by artificial heat, growers are compelled to cover the glass with mats or blankets to keep the plants from freezing. No corn has been planted, or very little at least, and replanting will absolutely be necessary in such instances. Of course, it is not yet too late for corn or potatoes to make a crop, but we cannot overlook the fact that we are getting close to the danger line, where every day's delay reduces crop prospects.

INCORPORATED.

La France Carnation Co., Elmira, N. Y.; flowers, plants and vegetables; capital, \$50,000; incorporators, F. L. La France, T. E. La France, D. A. Kent, H. A. La France.

TO CATALOG MAKERS.

We are able to quote a low price on the majority of the electros of the illustrations in HORTICULTURE.

PUBLICATIONS RECEIVED.

Report of the Park Commissioners of the city of Haverhill, Mass. Haverhill is to be congratulated in its 250 acres of beautiful park reservations, its intelligent management by a progressive Board, and last but not least, the genial superintendent, Henry Frost, who has held the position from the establishment of the Department, and whose portrait adorns the front page of this report.

The twenty-fourth annual report of the Board of Park Commissioners of Minneapolis, Minn., is received. This is the first report of Theodore Wirth as superintendent and, as is everything that gentleman undertakes, is thorough, practical and very interesting. It is illustrated with a number of views in the various reservations and there are three large maps showing contemplated improvements and additions.

Farmers' Bulletin 284 of the U. S. Department of Agriculture, issued May 10, treats of Insects and Fungous Enemies of the Grape east of the Rocky Mountains. It is an illustrated pamphlet of 48 pages, prepared by A. L. Quaintance and Dr. C. L. Shear. It states the nature of the insect enemies and the means of controlling them, then discusses the fungous parasites, including treatment, and in conclusion gives an account of spraying apparatus, with directions for applying spray mixtures.

"The Terrapin Scale" is the subject of Circular No. 88, issued May 14, by the Bureau of Entomology, U. S. Dept. of Agriculture. From every State east of the Mississippi River and several States west, also from Canada this, the most generally injurious of all the scales has been reported. It feeds on a wide range of plants, including both wild and cultivated trees and is a dangerous pest which may be controlled but never eradicated. The lime-sulphur wash, so effective against the San Jose scale is said to be worthless for treating the terrapin scale, and the kerosene emulsion has proved to be the most effective remedy thus far.

SHRUB AND GARDEN CHAT.

The improvements to be made at the estate of W. H. Moore, Pride's Crossing, Mass., this spring include a rose garden.

Spiraea Thunbergii has never been more beautiful than it is this season; it has bloomed with a profusion rarely equalled.

A formal garden is to be constructed in connection with the magnificent new country residence of C. P. Searle at Ipswich, Mass.

A good many prunuses are blooming sparsely this year, among them *P. pendula*. Pyruses as a rule are heavily loaded with flowers.

Wistarias throughout New England are flowerless this year. From all appearances the flower buds were destroyed in the early severe freezes last fall.

Ernest W. Bowditch has prepared plans for a large formal garden at the new summer home of Col. W. R. Nelson of Kansas City, which has been built this season at Magnolia, Mass.

Cornus florida is badly damaged and in many cases all the flower buds are dead. The pink flowered variety seems to be more tender than the white; in the vicinity of Boston one year in three is about the average of its blooming.

A dwarf *amelanchier* collected in Connecticut, and disseminated by the Arnold Arboretum, has proven to be one of the most useful of early blooming low border shrubs. It grows but eighteen inches to two feet in height and is covered with flowers clear down to the soil.

Rhododendron Vaseyi is making a beautiful show in the shrub plantations in the Boston parks this spring. The plants vary greatly in color some being almost white, others a deep glowing pink. This hardy azalea cannot be too freely used for early spring effect.

One of the finest things in the Arnold Arboretum during the past week is a specimen of *Prunus pseudo-cerasus* with beautiful purple-bronze foliage contrasting with the white bloom. The tree was grown from seed gathered by Professor Sargent in Japan, fourteen years ago.

Rhododendrons have suffered greatly from the effects of the severe winter in their foliage and their flower buds. In the varieties which are not in the "iron-clad" class the buds are in many cases entirely dead. Only those plants that occupy peculiarly sheltered locations or were given heavy winter protection will give a full crop this spring.

As anticipated, the demand for fancy ornamental hardy stock of every description has been tremendous throughout the entire country this spring. Many orders have been refused owing to the inability of dealers to supply the goods wanted. The country life journals and civic improvement societies have done much to develop this popular demand.

Notwithstanding the oft-repeated advice given in all magazines and papers treating on gardening topics that spring flowering shrubs should not be pruned until after they have bloomed, we still see butchered *forsythias* and *spiraes* on all sides—the greater part of their blooming wood trimmed off and their beauty gone—victims usually

of garden owners who want things "trim and tidy" on their grounds.

SPRING PLANT PRICES IN DETROIT.

At last we have been favored with a few warmer days and the fears of the plantsman have been relieved through that. Most bedding plants are here disposed of to grocers and hucksters, and they are put up in boxes containing thirty 4-inch pots each. So far a good start has been made with a fair price, i. e., \$2.40 per box. Pansies bring \$3.00 per 100. Reputable flower stores sell geraniums at \$1.50 per doz., but it is doubtful whether the majority of florists are willing to keep the price at this figure. I say willing because the buying public is ready to pay that much as long as there is no chance to get them any cheaper. The total visible supply of this class of plants is limited and the opportunity to break

away from the old timeworn custom of selling geraniums for \$1.00 per doz. and establish a living price of \$1.50 per doz. has never been better. This matter of getting a price above the bare cost of production in these articles of course resolves itself into the question of whether all of the dealers are willing to ask the advanced price.

FR. DANZER.

GERANIUMS

3000 to 4000 Geraniums, *S. A. Nutt*, *Beaute Poitevine*, in 3 and 3½ in. pots, \$6.00 per 100.

200 *Beaute Poitevine*, very large plants, 13-15 inches in diameter, \$6.00 per dozen.

Call and inspect the stock before buying elsewhere.

A. C. LAKE

Wellesley Hills - - - Mass.

Dreer's Hardy Perennial Phlox

We are the largest growers of Perennial Phlox in the world. Our collection is unequalled, and we are prepared to furnish the new and rare kinds as well as all the popular and standard varieties in large quantities.

The plants we offer are nearly all strong one-year-old field-grown plants or equally strong divisions, and will make a fine display of flowers this season. This stock is much superior to and must not be confounded with young Winter propagated stock such as is generally sent out in the Spring of the year.

New and Rare Hardy Phlox and Varieties of Special Merit

	Per doz.	100	1000
Albion (Tall). A variety which originated with us several years since and which is now offered for the first time. Strong grower, pure white with faint aniline red eye.....	\$1.50	\$10.00	\$90.00

BALTIMORE NOTES.

A hail storm visited parts of Baltimore on the 19th inst. The suburb of Brooklyn appears to have been the most severe sufferer. Among those reported to have been badly hit were Lehr Bros., with 125 boxes of glass broken, also Martin Duckstein and John Rider, with no details. It is understood that neither of those mentioned carried any insurance. The neighborhood of Rider and Ruxton was also touched slightly.

William Fraser, proprietor of the Ruxton Floral Nursery Co., is threatened with a break up of his snug little twenty acre property on account of railroad extension. That a good round sum to make up for the disruption will be forthcoming is some consolation.

John Cook has a new shell-pink, ever-blooming rose as yet unnamed, which he considers has more good points from the florists' standpoint than anything he has yet raised. Madonna still remains his favorite as the loveliest of all white roses.

Isaac H. Moss is greatly pleased with the range of connecting houses built for him last year by the Lord & Burnham Co. He finds it easy to control the temperature for different sections without the aid of partitions by merely cutting out the heat where not wanted.

Fred C. Bauer has produced some remarkable seedlings of *Lilium longiflorum* which show great size and vigor. He is also an enthusiast in crossing and selecting the fuchsia which he grows quite extensively.

of Cooks is not related to the other celebrated Baltimorean of the same name.

The Clark establishment on Park Heights avenue has been purchased by Carroll B. Hoffman, who is running it in connection with his old place which adjoins.

Chas. L. Seybold is now located at Carroll Park as superintendent, and a vast improvement is already noticeable during the short period of his incumbency. This park was originally designed and laid out by Mr. Seybold, some 14 years ago.

Edwin A. Seidewitz has a fine new retail store at 323 North Charles street, built last year at Arlington.

Mr. Lehr, senior, father of William and Henry Lehr of Brooklyn, is still hale and hearty, although in his 83rd year.

Considerable damage resulted to early shrubbery and herbaceous plants in this vicinity from the late spring frosts—particularly to lilacs and peonies.

Samuel S. Pennock, Philadelphia, and other visitors were treated to a ride in William Feast's new auto, on the 22nd inst., making a circle of trade visits in record time and unexampled elegance.

G. C. W.

SEND COPY EARLY.

Memorial Day comes this year on Thursday, HORTICULTURE'S regular publication day. On this account we shall go to press on Wednesday and copy for reading columns or advertising must reach us Tuesday, or not later than Wednesday morning to insure insertion.

John Stinson has been appointed highway commissioner of Norwood, Pa.

NEWS NOTES.

G. V. Nash of the N. Y. Botanical Garden gave a lecture on Water Lilies and Aquatic Plants at the Bronx Park Museum on Saturday, 18th inst.

In a hailstorm which visited Pine Bluff, Ark., on May 6, vegetation suffered severely. The greenhouses of Mrs. C. A. Starr had much glass broken.

The Illinois State Fair will be held at Springfield, Ill., September 27 to October 1. Prize schedules may be obtained from R. O'Dwyer, 110 So. Desplaines St., Chicago.

Allen M. Good of Waynesboro, Pa., claims to have perfected an inexpensive mixture which has proved superior to the lime, sulphur and salt wash to destroy the San Jose scale.

The Board of U. S. Appraisers at the port of New York have advanced the valuation of 240 *Dendrobium Wardianum* from Sander & Sons, London, from 12 pounds to 13 pounds 10 shillings; add cases.

At the Spaulding estate at Pride's Crossing, Mass., work is progressing on a formal garden of ten acres' extent which, when completed, will form one of the most notable horticultural features of the North Shore.

The item regarding a fire in the greenhouse of G. W. & W. A. Temple, in our last week's issue, should have stated that the fire was in the greenhouse of W. A. Temple, Hopkinton, Mass., and there was no insurance.

TO CATALOG MAKERS.

We are able to quote a low price on the majority of the electros of the illustrations in HORTICULTURE.

BUSINESS CHANGES.

W. J. Marshall of Togus, Me., has purchased the Copeland street greenhouses at Campello, Mass.

The Golden Gate Floral Company has opened a flower store at 989 Golden Gate Ave., San Francisco, Cal.

The Wagoner Floral Company succeeds Wagoner's and the Columbia City Greenhouses at Columbia City, Ind.

F. B. Vandegrift & Co., custom house brokers have removed from Beaver street to 15-25 Whitehall street, New York City.

Frank X. Dienst of Middletown, N. Y., has purchased the greenhouses of G. S. Belding on Cottage street and will take possession on June 1.

James W. Davis has purchased the greenhouses of the Allison & Pope Company at Davenport, Ia., and will devote them to vegetable forcing.

Walter Mott has formed a partnership with Frank Burfit and the new firm will take over the business of M. I. O'Brien, Sharon, Pa., on July 1.

R. Vincent, Jr. & Sons Co., White Marsh, Md., have incorporated their business with \$100,000 capital. The officers are: R. Vincent, Jr., president; R. A. Vincent, secretary; T. A. Vincent, treasurer. The new company will take over all the business, greenhouse stock, land, tenement houses, etc., except the private homes, which the individual members formerly held jointly and there will be 50,000 feet of modern construction added to the greenhouses during the coming summer. Geraniums will be the leading specialty; 400,000 dahlias will be planted for roots and special attention will be given to hardy chrysanthemums and fuchsias.

NEWS NOTES.

Wm. A. Wettlin will remodel and enlarge his store in Hornellsville, N. Y., this summer.

Miss Nellie Sniffen has secured a position with E. J. Taylor, Greens Farms, Ct.

Calvert & Son of Lake Forest, Ill., will soon retire from business, if reports are true, after a successful career of a quarter of a century.

Mrs. Carrie Rehm will hereafter carry on the business at 832 Canal street, and at St. Charles and Napoleon avenues, New Orleans, La.

An appeal from a decision by the customs officials in charging 25 per cent. duty on rose cuttings imported into this country from Canada, has been decided against the American Express Company, and the action of the government sustained in the U. S. Court at Buffalo.

CUT FLOWER MARKET REPORTS

BOSTON Stock in the cut flower markets is in over supply and can't be moved at quoted prices. But as it could not be moved at lower prices nothing would be gained by cutting rates. If anybody wanted it the present price would not stand in the way. To be explicit, the present is the dullerest week of the season. The outlook for Memorial Day is pretty good. Carnation growers are on the verge of the customary June crop which always begins to assert itself about this time and the prospects are for a big and altogether luscious cut of carnations for the great floral holiday. The rose market, is as always, in a state of unrest. Let it be recorded that the high-grade roses are not in great request for Memorial Day. But the smaller material will sell well and the price will be paid cheerfully. Spireas are late and it is a question whether they get in for the holiday. Colored stocks will also be scarce, an unusual condition at this date. Out-door lilac, lily of the valley, etc., will be exactly on time.

COLUMBUS Trade has been especially good for so late in the season; but it does not seem at all like the end of May, more like early April. Stock of all sorts is much more plenty particularly carnations, and it certainly begins to look much more favorable for Memorial Day trade. The closing of cemeteries to Sunday burials, has resulted in making many florists busier than ever on Sunday, getting their

flower orders ready for Monday and there can be no question that those firms who do not open at all on Sunday will lose more or less business. As regards retail prices they remain without much change.

DETROIT Business in general is reported quiet. Carnations are just about enough. Roses have been very scarce the forepart of the week, but are becoming a little more plentiful.

INDIANAPOLIS Trade the past week has been about on a par with the preceding week, just about running equal to demand. Quality in all lines is all that could be desired. Beauties are plentiful, fine and in good demand. There seems to be no special call for Richmond and Liberty roses. Out-door lily of the valley is in abundance, depreciating the in-door grown stock. Fancy peas are to be had in any quantity. Carnations are holding their own with a good demand. Snap dragon has never been finer and finds ready sale. The plantmen are now in their glory, this being the height of the bedding season, that oft-repeated phrase "Sales far in advance of last year" still holding good. At present outlook it is doubtful whether there will be any outside blooms for Decoration Day in this section. In greens everything is to be had now.

NEW YORK The market is still loaded down with a superfluity of flowers in all varieties and grades and there is little that can be said in the way of

encouragement except that, had the weather been seasonably warm and sunny, the situation would have been worse. Memorial Day holds out prospects of activity as, of late years, the importance of this occasion has increased materially and the demand from out-of-town points will undoubtedly make good inroads on the stock of carnations, lilies, peonies, etc., as well as the medium grades of roses.

PHILADELPHIA Last week found business very much more stagnated than any week this season. The weather was much warmer which brought in a tremendous lot of all kinds of flowers, particularly roses and carnations, which sold at almost any price for the poorer grades. Carnations were sold by more than one wholesale house at 5c. a bunch and in some cases less to the street men who really were the only people who kept the stock moving at all among the wholesale houses and then only half-heartedly. Beauties were very plentiful, quality excellent, and moved off in better shape than the small roses. All small roses moved very poorly, excepting possibly the higher grades. Carnations kept very poorly, consequently sold poorly. The majority of sweet peas, on account of the warm weather, have not reached the market in at all salable shape. Lilies of the valley moved fairly well, perhaps not as good as might be, on account of the outdoor stock which is coming in.

NEWS NOTES.

Penstock Bros. have installed a new cold storage system at their establishment 1514 Chestnut street, Philadelphia.

J. H. Thurston succeeded Jos. Free, resigned, as manager of the Park Street Flower Market, Boston, on Monday, May 20.

The trailing arbutus is reported to be very scarce in certain districts in Connecticut where it has been abundant previous to this season. In many places it is entirely dead.

BETWEEN YOU AND ME, What
do you think of the Buyer's Directory
and Ready Reference Guide of HORTI-
CULTURE? I always look it over be-
fore I do any buying.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—Single man as assistant rose grower on commercial place. Steady position to good man. Give reference from last place and state wages expected with board. Dean & Co., Little Silver, N. J.

WANTED. A good designer, accustomed to waiting on retail flower trade, industrious and well-recommended. A good position for the right man, Thornton Bros., Lawrence, Mass.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B, care HORTICULTURE, 11 Hamilton Place, Boston.

WANTED—Grower who is thoroughly familiar with the growing of Pandanus, Dracaenas and a general and large line of Stove Plants, with commercial experience. A good position for an active man who understands his business. Address, giving reference, Henry A. Dreer, Riverton, N. J.

SITUATIONS WANTED

POSITION WANTED by experienced landscape gardener, civil engineer and horticulturist of some ten years' experience. Open for engagement with private proprietor or business concern after June 12. References supplied. Address, E. L. Raymond, 9 Felton St., Cambridge, Mass.

We can with pleasure recommend the services of a skilled gardener and orchid grower to any lady or gentleman requiring the services of such a man. Apply Carrillo & Baldwin, Secaucus, N. J.

WANTED—Situation as Head Gardener on private place; capable of taking care of orchids, ferns, palms, roses, etc. Best of references. Address N., care of HORTICULTURE.

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

FOR SALE

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 35 Erie St., Chicago.

FOR SALE—Second hand 4 in. cast iron pipe for greenhouse heating, five-foot lengths. 10 cents per foot, F. O. B. Exeter Machine Works, Exeter, N. H.

CUT FLOWER MARKET REPORTS.

(Continued from page 697).

Cattleyas are less abundant and are selling well. There are quite a few miscellaneous things coming in, such as snap dragon, and in fancy colors some small gladioli which are very nice and sell well. The prospects for this week are more favorable and the business outlook is much better, which is gratifying.

Trade the past week, **TWIN CITIES** has been very fair; while individual sales have not been large, numerous small sales brought business up to a fair standard. The fine spring weather brought purchasers out in large numbers and what spring flowers are on the market, sold to good advantage. Roses and carnations suffered some and large numbers were carried over from one day to another. Roses with all the growers are in full crop and the demand is light, thus having a depressing effect on prices.

On Sunday, the 19th **WASHINGTON** May, this city was visited by a severe storm of rain and wind, accompanied by hail. While the hail stones were not very large, for a few moments they fell very rapidly and were of sufficient size to make the owners of greenhouses feel quite uncomfortable. Since then and at the present writing prices are indispensable. Carnations have taken a drop in price, but are still in demand; forget-me-not, cape jasmine and lilies of the valley are, at present, much called for over the counter. Pond lilies are bearing the cold and beginning to bloom; outdoor roses are showing color. The present cool spell will, in one way, be an advantage; viz., in retarding the roses sufficiently to give a good bloom for Decoration Day, if a rainy season does not come now and spoil them.

HENRY A. DREER,
714 Chestnut St., Phila., Pa.

Greenfield, Mass.—E. A. Richards, extension 30x100.
Adams, Mass.—T. D. Brown, two rose houses.

Crude Texas petroleum has been applied by Superintendent Pettigrew to Commonwealth avenue, Boston, this spring with very satisfactory results, effectually stopping all dust and making the road bed smooth and hard. By count the travel on this road numbers three hundred autos an hour, a pretty severe test of the efficiency of the spraying process.

T. D. Brown, Adams, Mass., is to instal a new heating system and add two rose houses to his plant.

Cast Your Eye Here

This letter from a well known and prosperous Massachusetts florist should interest you.

MR. W. W. CASTLE,

Leominster, Mass., Apr. 6, 1907.

Dear Sir:—

The Boiler and Circulator installed by you last Fall has given entire satisfaction. I have saved at least twelve tons of coal, and have given Mr. Congdon an order this day for one of the largest Boilers you make to be put in at the Stone property on Nelson St., Leominster. It is the best Boiler-I ever had.

Yours respectfully,

(Signed) J. FULLER.

Watch this space next week. We shall present some more letters equally convincing.

In the meantime write for particulars of our new

Steel Plate Hot Water Boiler

built especially for greenhouse heating. Piping and fitting done according to most approved methods and satisfaction guaranteed. Perfect circulation in all kinds of weather absolutely assured by the use of our

Electric Circulator

W. W. CASTLE, Heating Engineer, - 170 Summer Street, Boston, Mass.

THE KROESCHELL BOILER

is the only perfect Hot Water Boiler. Made in 15 sizes, heating 6000 to 50,000 sq. ft. glass to 60° at 15° below zero.

Prices and Catalogue on application

KROESCHELL BROS. CO.

35 Erie Street, CHICAGO

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

E. HIPPARD, Youngstown, Ohio

It is what the Machine does—

what our customers say of our line—not what the opposition says—that should help you in deciding in our favor. A trial will quickly convince you that we have the best on the market. Our line speaks for itself. Circulators and prices for the asking.

117 E. Blackhawk St., CHICAGO

NOW STOP RIGHT WHERE YOU ARE

and before you spend another cent in all cypress

houses, turn the following fact over in your mind. To make any all-cypress house rigid, you must have heavy sash bars, numerous heavy purlins, a cumbersome, ugly, soon to decay eave line. If you don't build them heavy, then your house becomes wind-shaken, the putty loosened, letting the air in and the heat out. You have the extra expense of frequent reglazings. Such a house then can **never** be economical! Do you honestly think it pays to buy such repair troubles? Are you actually going to put your money into a back number construction, when all up-to-date, "right on the job" kind of growers are investing their money in a permanent proposition in our Iron Frame House? Think it over, then write us.

HITCHINGS AND CO.

Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

A QUESTION OF FIT

Any boiler that is loaded right up to its limit is short sighted economy. It requires constant attention, burns out the grates faster and when there's an extra zero night you are up against it. So put in a "Burnham" large enough to leave a working surplus. Then as your demand for more boiler capacity comes, add more sections. You can do this with a "Burnham" without change of piping or disturbing the base. The "Burnham" is a greenhouse boiler made to meet greenhouse conditions, and it meets them. Have your name put on the list for the new Edition E Catalog.

LORD & BURNHAM CO.

PHILADELPHIA Branch: 1235 Filbert St.

IF you want to get an accurate idea of exactly what the U-Bar construction is — how it differs from others — why it differs — then this new catalog of ours, you will find most satisfactory. It starts off with two pages of "Why the U-Bar" followed by the thorough consideration of

twelve representative subjects showing for each a plan, exterior and interior views along with a brief, readable description. From its pages you can form a somewhat definite idea of the kind of house you want and get a line on what it will grow. If you want to go into every detail of construction, there are some dozen or so pages of sections and parts, which in connection with the "General Information" will answer your queries. We want you to

know every U-Bar point — We want to send you this catalogue. **Pierson U-Bar Company, Designers and Builders U-Bar Greenhouses** Metropolitan Building, Fourth Avenue and 23rd Street, New York.

Oreodoxas

Linnaeus said: "Palms are the princes of the Vegetable Kingdom." Very soon after a person reaches the tropics he realizes the truth of this great statement,

Avenue of Royal Palms—*Oreodoxa regia*.

made so many years ago by this wonderful man, the father of botanists and greatest of classifiers. There are two men that I always like to pay homage to and these are Linnaeus and Columbus. Linnaeus had a terribly hard struggle in his early life. My friend, Blomberg, did not tell us enough about his great countryman. I also thank HORTICULTURE for giving us this timely article on this great man who made this world more pleasant to live in.

Often when on the briny deep I have thought of Columbus and the monstrous difficulties he had to encounter when trying to discover this great country. We are under great obligations to these great men and few of us realize what they have done for us. We do not give enough credit to those great pioneers. We hear much about raising monuments to poets, historians and such like men in our parks and gardens in this country, but very few monuments have been built to this great naturalist.

I am not a lover or yet a believer in monuments in our fine parks and boulevards or yet in our public gardens. Yet if any man deserves such a memorial in any of the above places it is Linnaeus.

I must return to my subject and I still agree with Linnaeus that palms are not only the princes of the vegetable kingdom but to man in the tropics they are certainly the most useful plants and supply almost all his wants.

In the very largest greenhouses that are built palms are not seen and cannot be expected to appear as they do in their native wilds, as some of these plants reach or attain more than one hundred feet in height.

In the West Indies the *Oreodoxas* are wonderfully plentiful and in some parts of the islands they are the most interesting plants in the landscape.

Six species of *Oreodoxa* are known to science. The

most common and the most plentiful are the royal palm (*Oreodoxa regia*) and the cabbage palm (*Oreodoxa oleracea*).

Probably in no part of the West Indies or in South America are to be seen so many of the royal palm, or as the Cubans call it "Palma real," as in Cuba. A person riding on the train from Santiago de Cuba to Havana passes through immense forests of this picturesque palm. The habit of the royal palm is very graceful and exceptionally striking in the landscape. We have nothing in our northern forests that will compare in habit with this singularly beautiful palm, when it is seen growing in the very best conditions. Not only is this palm to be found in the forests and fields, but in every small town and city it is associated with the buildings. In Cuba for long avenues this tree is used more than any other. In riding on the train from the centre of Cuba to Havana one can see perfect avenues miles in length of this graceful palm.

The picture which accompanies this article graphically represents the spacious avenues which this imperial palm makes in Cuba. An avenue like this one when once seen makes an impression that can never be erased from the memory. Not only for avenues is the royal palm used but in the parks and plazas they are superbly beautiful when placed in right positions.

This *Oreodoxa* does not make a good pot plant nor is it as pretty in a young state when planted out. Given perfect condition in ten or fifteen years it makes a handsome specimen.

Palma real is used by the Cubans in many other ways. The huts or houses of the poorer classes in the country are made almost entirely from this palm. The sheathing base of the leaves is used for the sides or the walls of the houses and the other portions of the leaves are used for thatching the roof. In fact I have seen houses where every part of the building was made from this palm. The leaves are also made into coarse matting and into baskets. The fruits or nuts are used for feeding hogs and cattle.

This palm grows in certain localities in Florida, chiefly at "Little and Big Palm Hummocks," east of Cape Romano and also on Elliott's Key.

Cabbage Palms—*Oreodoxa oleracea*.

The cabbage palm (*Oreodoxa oleracea*) is just as beautiful a plant as the above species but cannot be seen in perfection until one goes further south to the

tropical island of Trinidad. This species loves more heat and moisture than the royal palm. This plant is used in Trinidad and South America much in the same way as the Cubans use the royal palm. When in a young state the centre leaves of the young plants are cut and used as a vegetable, hence the name cabbage palm. The accompanying photograph shows a group of these trees growing in the Queen's Park, Port of Spain, Trinidad, taken by the writer about one year and a half ago.

The Porto Rican royal palm is *Roystonea borinquena*. This genus was formerly referred to *Oreodoxa*. The Porto Ricans used this palm very much in the same way as the Cubans use the *Palma real*.

Oreodoxa granatensis is a graceful and beautiful species which in a young state makes a useful pot plant and is a native of Columbia.

Oreodoxa Sancona is also from Central America. It has long graceful leaves with narrow long leaflets, which make it very desirable as a pot plant.

British Horticulture

GARDEN FURNISHING

The developments which have taken place in filling the British gardens with new and improved floral treasures have had their counterpart in the higher standard which has been reached in providing an appropriate artistic setting. The artist has co-operated with the gardener, and with a harmonious blending of their talents some charming pictures have been produced. Terra cotta ware is much in favor amongst gardeners, the pleasing soft tone being preferable to the cold white of artificial stone, whilst the material is equal in durability. Elegant vases, of a classic design, with imposing pedestals, form a splendid embellishment for garden steps or wide terraces. Doulton ware is in favor for garden ornamentation. One notable feature in the manufacture of this ware is that the process of decoration is carried out whilst the pieces are plastic or unbaked, and the ware is completed in one burning. During the last stage of firing in the kilns when the ware is just on the point of vitrification common salt is thrown in the heated chamber. The decomposition of the salt fills the kiln with fumes of salt-vapor, producing on the wares a thin glaze of silicate of soda, the coating being very even and thin. Some ornate samples of this ware were seen in the grounds of the British Commission house at the St. Louis exhibition.

MIRRORS OF TIME

In a chat with the head of a firm of sun-dial makers, I learnt that there is an increasing demand for these garden ornaments. One great charm of the sundial is that in many cases it furnishes an interesting memorial of some noted man or historic place. For instance, lovers of Dickens are able to secure a replica of the sundial which formerly ornamented the grounds of Gladshill place, near Rochester, the great novelist's Kentish home. Another sundial of literary interest is a fac-simile of one belonging to Sir Walter Scott at Abbotsford. The pedestal is of Gothic design, three feet high, with a Greek motto in front, "For the night cometh." The most popular form of sundial is the

antique pattern, formed of Portland stone, usually depicted in pictures of old-world gardens. One of the latest designs is the Empire sundial. This shows the respective times in the principal cities of the globe, and the dial bears the appropriate motto: "The sun is always shining somewhere in the British empire." Another very suitable design is the floral sundial. The most appropriate flowers for each month are engraved between the equation table. The centre of the dial immediately around the gnomon is engraved in the form of a star pointing to 16 compass points. A design lately completed in marble represents the figure of Father Time bearing a globe dial, which he is handing to an infant, typifying the new day. Another elaborate arrangement for a pedestal is a representation of the Three Graces supporting a dial.

GARDENERS' BENEVOLENCE

Arrangements are being made, at the time of writing, for the annual festival of the Royal Gardeners' Orphan Fund. All branches of horticulture are well represented in the list of stewards. The claims of the society will be voiced by the Lord Mayor, Sir W. P. Treloar, the chairman, who is well fitted for this position, seeing the prominent part he has taken in the cause of London's poor crippled children. His philanthropy has gained for him the title of the Children's Alderman. Since its inception in 1887 the receipts of the society have amounted to £34,937 (pounds). Of this total the sum of £16,373 has been expended in assisting in the maintenance and education of the orphans of gardeners. During the same period investments have been made amounting to over £11,000, this providing an annual income which covers all ordinary working expenses, and furnishes a balance to the credit of the fund. The total number of orphans who have been elected to receive the benefits of the fund is over 230. Several orphans are awaiting to receive assistance from the society, and it is hoped to get a substantial sum at the festival to enable the committee to make a suitable provision. Last year at this gathering the sum of £1,000 was obtained. The committee anticipate great things this year, for the work of the society is so well known that there is sure to be a substantial recognition made. We are extremely fortunate in this country in the organized efforts made for those engaged in the gardening profession, to provide for the various misfortunes which arise.

SOME NEW WALL FLOWERS

Wall flowers fill such a useful part in our gardens that it is well an addition has been made to add variety to these old favorites. A new introduction likely to be popular is Sutton's ivory white, a large flowering and compact habited sort, which offers a striking contrast to the darker and richer shades. Messrs. Carter & Co. have two new crimsons and scarlets, these producing imposing flower spikes. Another novelty from the same firm is Carter's Spanish Queen. This is really a multicolored variety, an unexpected cross between the Brompton stock and wall-flower, giving an entirely new departure as regards tint. Other varieties which are likely to be found extensively grown are Ellen Wilmot (bright ruby), Faerie Queene (lemon or pale citron), Eastern Queen (apricot changing to rosy pink), Vulcan (bright crimson), and Cloth of Gold (bright yellow).

W. H. Adsett.

Ornamental Conifers

Continued from page 650

Thuyopsis dolabrata from Japan is an interesting little tree when well grown. It requires a well sheltered situation and a cool loamy moist soil. The shoots are flat and toothed on both sides like a double saw. The tree is broad, pyramidal in shape and one of the nicest ornaments for small lawns. The variegated form seems to be more vigorous than the type. *T. laetevirens* is a dwarf flat-growing form from *dolabrata* making no leader. It has the same toothed foliage but fine, and shorter shoots. *T. Standishii* also known as *Thuya japonica* in some places, is much hardier than the two others. It resembles more a coarse arbor-vitae with longer pendulous shoots and broad pyramidal outline. It will grow in any place where a *thuya* will grow.

BIOTA

Biota orientalis, the Chinese arbor vitae, is a medium sized tree with flat erect shoots and narrow pyramidal outline; it is not very particular about soil, but grows better in sandy loam, and wants to be sheltered from north winds. It is not a strikingly ornamental tree, but different forms of it are of great ornamental value, used in the same way as *thuya*, especially for formal work. The seedlings raised from the different forms of *Biota orientalis* vary much and as a result a number of good little trees are in cultivation. *B. o. compacta* and *aurea* can be taken as two types of departure from the original, the first a pillar, the second of spherical form, but there is a gradation in both of those forms between larger and smaller, more compact or more open, those two keeping the middle; in color they run from yellow to bluish green. Many of these forms are named but the authenticity of the names is often very doubtful as the names are nearly all local. They are all striking on account of the vertical arrangement of their flat branches. A few that differ in appearance are the following: *B. o. aureo-variegata*, narrow pyramidal in form and strongly yellow variegated; nice when young but less so when old. *B. o. decussata*, better known under the name of *Retinospora dubia*, is a very compact pyramidal little tree, divided into a few stems when old, with heather-like foliage, dark green and of a peculiar cream color in winter. *B. o. elegantissima* and *semper-aurescens*, which look much alike, are both of pyramidal outlines, the first one broader, very compact, yellow in color the whole year, but darker in winter. *B. o. filiformis* has a spherical outline with cord-like erect shoots; *filiformis pendula* grows erect and high, with the same cord-like but pendulous shoots. All the Chinese arbor-vitae often lose some of their branches in winter when not well enough protected, but with intelligent clipping they soon fill out again. The hardest of that section is *B. o. Zuccarinii*, a Japanese tree of ovate, conical outline, very compact and dark green in color. It is a fine tree for small lawns and not particular about situation; for New England it is the best of all the biotas.

LIBOCEDRUS

Libocedrus decurrens, sometimes called *Thuya gigantea*, the white cedar from the Pacific coast, is the only one of the genus about hardy here. It grows to a tall narrow tree, well furnished from top to bottom with short flat branches. In Central Park, New York, near Bolivar rock, is one over forty feet in height. This tree wants a good sheltered place to succeed. There is

in cultivation a tree under the name of *T. Graigii* which spreads its branches more, has more reddish bark, and more glossy foliage, but is more tender.

Am. Dutham

The Three Best Roses

It may interest your readers to know which are the three best all-round roses, in the opinion of the members of the general committee of the National Rose Society of England. W. E. Nickerson of Cambridge, Mass., is a member of the National Rose Society of England and last year he offered to the Society the sum of fifteen guineas to be awarded to the raiser of the best all-round rose of recent introduction in each of the three sections, viz., Hybrid Perpetual, Hybrid Tea and Tea. Mr. Nickerson laid down no hard and fast rules but left it to the society to determine by which means the desired end should be attained. "He was anxious simply to encourage the introduction of really fine roses which are well adapted for growing by ordinary amateurs in the open air and if so be, in the United States as well." The matter was left in the hands of the National Rose Society's General Committee who decided that (1) Only varieties sent out in 1900 and in subsequent years should be eligible; (2) That the rewards be decided by ballot; (3) That all members of the general committee be entitled to vote. The ballot took place recently and the result was declared as follows: The best Hybrid Perpetual was declared to be *Frau Karl Druschki*; the best Hybrid Tea *Dean Hole* and the best Tea *Mme. Jules Gravereaux*.

Frau Karl Druschki is already one of the most popular roses here, both for exhibition and for garden decoration. It is undoubtedly the best white rose we have. Not only are the individual flowers remarkable for size and good form but the plants blossom freely throughout a long period. (P. Lambert, Trier, Germany.)

Dean Hole was awarded a gold medal by the National Rose Society when first exhibited. It is one of those roses of such extraordinary coloring that a pen description quite fails to portray its beauty. It is described by the raisers as silvery carmine, shaded with salmon, absolutely distinct and by far the finest of its color. A colored plate of this rose was sent out with the Rose Number of *HORTICULTURE* March 9, 1907. (A. Dickson & Sons, Ltd., Newtownards, Ireland.)

Madame Jules Gravereaux has come to the front within the last year or two and is rapidly becoming popular. It is a strong growing variety and may be used as a pillar rose as it makes a large bush. The flowers are of exquisite form, pale yellow in color, tinged with peach in the centre. (Soupert and Notting, Luxembourg.)

It is of course impossible to say that a certain rose is the best rose for everybody for a variety that does well in one garden may give quite indifferent results in another garden where the conditions are different. Still there are few, if any, roses that have a better claim to the high distinction conferred upon them by the Nickerson awards than the three above mentioned.

The gardeners' opportunity The unprecedented demand for reliable foremen and assistants for greenhouse and outside work this season and the difficulty experienced in filling such places with reliable men is a good index of the prosperous condition of horticultural industries generally. No really good steady gardener has idleness forced upon him under present conditions.

Things we should like to see It makes one somewhat envious to read the details of the displays at such an exhibition as that of the Royal Horticultural Society of London described in this issue, with its wealth of new

and rare things. The educational opportunity of such a show, especially to anyone engaged in the horticultural profession, is a rare privilege which in this country we have not yet had provided for us, except in a very limited degree. No time should be lost by those who are preparing for our National Flower Show to arrange for exhibits at that time by these firms abroad.

The advent of the cluster rose in flower work We notice, with pleasure, the appearance of Lady Gray rose as a novelty in the cut flower market. This type of rose, coming in profuse racemes of small blooms, charming as to color and often very fragrant, should receive a ready welcome from every floral decorator who is possessed of good taste and the ability to use it. Evidences are not wanting to indicate that we shall soon have roses of the Lady Gay and Hiawatha type that will be continuous bloomers. As soon as this goal is reached the cluster roses will surely take a place of permanent prominence in the list of florists' staples, standing in the same relationship to flowers of the American Beauty type that the pompon chrysanthemums do to the Japanese blooms in decorative value and, in some measure, side-tracking the small inferior grades of standard varieties which have hitherto served this purpose.

The hardy flowering bulbs We commend to those of our readers who are interested in garden planting and to those who sell to such, the instructive paper on bulbs for bedding purposes by W. N. Craig, which appears in this issue. The lists of tulips, hyacinths and narcissi given therein as well adapted for such work will be found particularly valuable. We can stand much more of gorgeous display and color riot in early spring after the barrenness of the dreary winter months than in the blaze and heat of summer. The hardy bulbs fill in as nothing else can, the long interim between spring opening and the time when garden planting can safely be done. It is no wonder that the public admire the gay display and now, while the enthusiasm is on, is the time to canvass for orders for fall delivery. The planting of tulips, daffodils, chionodoxas, scillas and crocuses can and should be made much more general and extensive than it is. Now is the time to make up your import orders.

The Spring of 1907 The remarkably cold spring of 1907, which has broken all records as to temperature, caused the loss of potatoes and seeds of various kinds, killed off early vegetables, blighted fruit buds, depleted the coal bin, retarded the flower crops and, among other vagaries, treated us to snow on May 26 and a thunder storm on May 27, has yet some compensations to its credit. It has, for instance, stretched out what promised to be a hasty, unsatisfactory nursery season to one of the longest and most favorable planting seasons ever experienced. It has kept society people from flitting to seaside or foreign land, thus lengthening the season for the city florists, entertained the New Yorker with the unheard-of spectacle of apple trees in full bloom on June 1, and given those of us who cannot get vacations reason to be grateful for so much home comfort. Had it only shrivelled the gypsy caterpillars as it has the early "garden sass" we should have been glad to vote an award of merit to the spring of 1907. But it didn't.

ALPINE PLANTS.

The article from our esteemed friend Robert Cameron, on Alpine plants, was of especial interest to me, I being familiar with most of the Alpine plants, and thoroughly acquainted with the Rock Garden in the Royal Botanic, Edinburgh. You will excuse me for stating that an Alpine house is the supply for the Rock Garden; also plants that are of special value and require more care, sometimes called Duplicate House, hence rocks in the Alpine House would seem to me to be out of place.

The Rock Garden in the Botanic, Edinburgh, is a charming spot, full of interest all the year round. The collection is very extensive and is greatly envied by all Alpine lovers. The gems that thrive best are the *Ramondias*, *Haberlea Rhodopense*, *Onosma tauricum*, *O. roseum*, *O. album*. These all thrive best planted on the sides of a dug-out pit: *Morisia hypogaea*, the beautiful little plant of *Chicocoden Soldanelloides*; *Diapensia Lapponica*, *Andromeda Hypnoides*, *Asperula Arcdensis*, *Dianthus Callizonus*, *Campanula Zoysii*, *Phyteuma Comosum*, *Androsacea Arachnoides*, *A. Chumbii*, *Aubrieta Fire-King*, *Gentiana verna*, *G. Bavarica*, *Geranium argenteum*, *Lithospermum prostratum*, *L. Caeneasens*, *Dryas Drummondii*, *Daphne alpestris*, *Sedum Pottii*.

The encrested saxifraga is a very interesting rock plant. They do not seem to be quite so happy as some of the others, though their culture is of the simplest. Many of the nurserymen supply these beautiful gems, and it is a wonder to me that we very seldom come across an extensive rock garden on this side of the Atlantic. Much may be said and done toward constructing a natural rock garden. To be successful the best method is to secure the highly-prized jewels and construct suitable pockets for the individual requirements of each species. Though quite a few owners of large estates are building those clipped, pruned Italian gardens, it seems to me that a well-arranged and judiciously planted rock garden is of more continued interest and more in harmony with many of our large estates.

DAVID MILLER.

"BUTCHERING" THE SHADE TREES

Editor of HORTICULTURE,

I would call your attention to the work of the department of parks in our community. They are butchering the shade trees and, from the way in which they do the work one might think they were short of fire wood. The wounds are bleeding profusely too. But the worst feature in the estimation of the citizens is that the nests of the singing birds, as robins, etc., are destroyed. Why was not this work done in the winter or early spring when the men were idle, or else why can they not wait until the birds are hatched and can take care of themselves? I know there is a law in this State against killing song birds; is there none against destroying their nests? Men who work in the parks must take civil service examination; I believe the commissioner needs it as much as any one else.

Yours respectfully,

BEAULIEU.

Woodhaven, N. Y., May 22, 1907.

RETRIBUTION AND THE EXPRESS COMPANIES.

Shocked and bewildered, the express companies haven't yet recovered from the concussion to nerve centers caused by the decision rendered by Franklin Lane, of the Interstate Commerce Commission, in the matter of certain rates from New Jersey points to New York city.

For the short haul on cut flowers from those points, the United States Express Co. was formerly accustomed to charge 50 cents per 100 pounds. Last July they increased the rate to \$1. Mr. Lane has just made the rate 60 cents.

At various times and places in the past there have been temporary reductions in express charges due to competition among the several companies, but long ago an end was put to that sort of foolishness. This is the first time that considerations relating to the value of the service rather than what the traffic will bear and the companies' ability to utilize the money have entered into the fixing of an insurance charge. Something has been happening in this country. The Roosevelt rate-regulation measure governs these as well as other interstate common carriers.

The curious thing about the express situation is that although the average rates throughout the country are such as to enable them to earn enormous net profits, the stockholders, at least in the case of the United States company, are chafing under a long series of grievances as well as the public. A circular issued in New York this week by a stockholders' committee sets forth that while the dividends declared are only 4 per cent., the net profits of Mr. Platt's company for the last five years are shown by the management's own statement to have ranged from 11 to 18 per cent. and are believed to have been much greater.

The board of directors is a self-perpetuating body, no election to it by the stockholders having been held for more than twenty years, and runs things with a high hand and an eye single to its own advantages.

The stockholders are organizing in an effort to obtain their rights from Senator Platt and his inner ring in the management. The public ought to be engaged in a similar effort. Net profits of 18 per cent. and more show that the company can afford to make a material reduction in its charges and the existence of the interstate commerce commission and the precedent in the cut-flowers case show how this and other express companies may be forced to grant the reduction.—*Detroit Free Press*.

THE CAPE COD CRANBERRY INDUSTRY.

It is estimated that within a decade the production of cranberries on Cape Cod has doubled and the next five years will see the present output increased by at least 100 per cent. Hundreds of men are engaged at present in draining, diking, sanding and planting in the effort to furnish a supply equal to the ever-increasing demand for this popular little fruit. It costs, on an average, about \$400 per acre to properly prepare a cranberry bog and the yield of berries begins in the third or fourth year.

SHRUB CHAT.

The forsythias have been glorious this season. The magnolias also are extremely beautiful as seen at the present time in single specimens here and there on lawns, blooming in profusion.

The Scotch broom *Cytisus scoparius*, looks as though before long it will feel quite at home in the northern States. A clump of broom covered with its yellow flowers is something worth noticing.

Pyrus Japonica is now appearing in its gorgeous mantle of scarlet. A hedge of *Pyrus Japonica* is beautiful while the plants are in full bloom and as a hedge for protection it is always useful. The plants thrive in any kind of soil and endure a very severe climate.

Azalea amoena makes a neat and attractive low hedge. It makes a splendid showing early in the season when planted in quantity in a mass wherever it is able to stand the winter. It does well in Brooklyn, N. Y., and Newport, R. I., but is not reliable around Boston.

Berberis Thunbergii is a beautiful shrub of graceful habit, the leaves are bright green turning in the autumn to tints of yellow, scarlet and crimson. The berries of this shrub are produced in abundance and their coral color helps considerably to make this a charming shrub even in the depths of winter. This berberis is especially effective in groups or as a hedge.

OUR FRONTISPIECE.

The picture of the little greenhouse at the Arnold Arboretum, Boston, and its presiding genius Jackson Dawson, will recall to the minds of many of our readers visits to that unpretentious but always interesting spot where, to the visitor, the hours fly by on swift wing as he scans the boxes of thousands—yes, hundreds of thousands of young seedlings from every mountain and valley of the earth's temperate zones and listens to the fascinating discourse of the man whose life is devotedly spent among these things he loves so well and in the propagation of which he stands without an equal. Far and wide are distributed forests of shrubs and trees which spent their infancy in this little place. The amount of material turned out annually is incredible and is equalled by no establishment, however pretentious, on this continent, very much of it new, rare, and to some extent experimental. And if there's a spark of life left in the seed Jackson Dawson can make it grow, no matter where it came from.

The Jubilee International Exhibition at Mannheim, which opened on May 1, was especially interesting on May 7 when orchids were in competition. The schedule called for collections of orchids in 100 varieties, of botanical orchids, of dendrobiums and of cypripediums. The prize winners included Messrs. Beyrodt of Berlin, Maron of Brunoy, and Hugh Low & Co., of England, whose collection included most of the orchid families in cultivation. English and American perpetual-flowering carnations displayed by Messrs. Low received a gold medal.

NEWS OF THE CLUBS AND SOCIETIES

ROYAL HORTICULTURAL SOCIETY OF LONDON.

At the R. H. S. show, May 14th, the hall was well filled, as not only the usual trade exhibitors were showing but there was a good display from private gardens, herbaceous perennials being predominant. From Mr. Prince, gardener to the Marquis of Salisbury, came very fine forced strawberries, Laxton's Royal Sovereign, and the only other fruit,—if such it may be called,—was a gallon of peas from Sutton & Son, "World's Record", and two more sorts, all of merit, and fit for immediate use, carrying 6 to 7 peas in a pod, while Hobday's giant rhubarb was shown forced by the raiser in good condition and over four feet long, though stout. On entering the hall, Cottage and Darwin tulips proved the leading objects, Peter Barr, Wallace & Co., Alex. Dickson & Sons and Ware putting up grand lots in which the darkest seem to be Frau Angela and Zulu, almost black. Novelties were not many—probably reserved for the grand Temple show on the 28th et seq.

The Veitch Group.

Veitch & Son showed a fine old plant in *Hydrangea arborea*, the flowers of which are produced in small round trusses, and in great profusion, also *H. hortensis* *Mandschurica* and the graceful *paniculata grandiflora*, but their cynosure was tall, densely-flowered trees of the fine double cherry *J. H. Veitch*, while the light and cheerful *Pyrus malus* *Sche-deckeri* was on view as a well-done pyramid of blossom. Forced azaleas made a showy foreground to the group, Anthony Koster and Conseil Ceresole being very fine. They had a neat specimen of the double *A. rosae-flora*, a very old kind, and also of the new *Indica* Baron Ed. de Rothschild.

Alpine Plants.

Mr. James Douglas had a table to himself which he well filled with his specialty alpine and show auriculas, while at the end he had three large plants of the giant forget-me-not (*Myosotidium nobile*) like blue megasias; these having been grown in his cool dry pits, where he does his auriculas. Amos Perry had fine examples of the *Dropmore Auchusa Italica*, which is a great advance on the type in habit and size of flower, also cut pieces of the fine *Euphorbia Wulfeni*, and a vase of *Phlox Canadensis*, Perry's var. On this the tired eye could rest from the view of masses of the fine golden globe flower, *Trollius asiaticus* and *Fortunei* fl. pl. He also showed a fine dwarf and vigorous yellow lupine, *Thermopsis rhomboides*, *Orobis varius* and the brilliant *Geum miniatum*, and two pretty hybrid *Iris* *pumila*, *Princess Blanche* and *Princess Louise*, with a mass of the useful rock plant *Ledum palustre*, *Tiarella cordifolia* and *Pentstemon Menziesii*. I. C. van Tubergen again put up an exhibit of hybrid *Iris regelio cyclus*, all much resembling *Susiana*, the seed parent,

and no gain except from the botanists' point of view.

Some Orchids.

In marked contrast to these was a fine piece of the brilliant *Masdevallia Veitchi*. Orchids were again numerous, Low's cattleyas and laelias, *odontoglossum Rossi* and *Cypripedium grande striatum* standing out well above the rest. A corner was filled with *Salvia splendens* var. *Zurich*, by H. B. May, who also had *verbena* in pots—all of the Miss Willmot type, King of Scarlets being a fine new crimson. Barr's bank of Alpines in perennials contained a good many interesting novelties—*Ramondia Nathalia* and *serbica* being lovely, also *Viola pedata tricolor* and *Primula farinosa*.

Trees and Shrubs.

George Paul put up a splendid lot of cut flowering trees and shrubs. *Amelanchier Asiatica*, a very fine early thing, *Daphniphyllum*, a good evergreen shrub with white daphne-like inflorescence, and *Azalea High Beech*, scarlet, of the Ghent race were grand, while *Corchorus grandiflora* fl. pl. is a superb double kerria. Geo. Bunyard & Co. Maidstone had quite a representative collection of lilacs (*Syringa*) *Lemoinei* fl. pl., *Madam A. Chatenay*, President Grey, Mdm. Casimir Perrier and *Souvenir de Spaethe*, being most notable. *Photomagensis alba* should prove an admirable kind for the florists and would doubtless be quite white from the close atmosphere of the forcing pit. This firm had also a beautiful lot of *Primula Sieboldi* in all varieties.

Some Fine Groups.

J. Veitch & Son again staged *Kalanchoe flammea Kewensis* and *Felt-hamensis* and some lovely *Phyllocacti* *Agatheia Epirus* and *Admiration*, of lovely soft tints, and their *Exacum macranthum* and fine named cannas, besides some excellent carnations, including Gov. Roosevelt, Mrs. H. Burnett, Lady Bountiful and the fine white *La Belle*. Their strain of *Schyzanthus grand. hybrida* is much more highly colored than *Wisetonensis*, and of compact pyramidal habit. A few plants of *Calla Elliottiana* stood up above, while specimens of *Nephrolepis exaltatum superbum* and *Whitmani* made a fine base to the group. Gilbert & Son, specialists in this showy genus, had *Anemone fulgens oculata gigantea*, King of Scarlets and the pure white *The Bride* and *Tulip* (Darwin) *Glow*, brighter than any of the *Gesneriana* species. F. Dutton showed carnations *Robt. Craig*, *Christmas Eve*, *Lieut. Peary*, and *Prosperity* with many other leading kinds. Cheal & Son showed cut branches of *Exochorda grandiflora*, *Rhododendron Snowball*, *Pyrus malus Transcendant* and the pretty early broom *G. praecox*, and *Reuthe Keston* had the rare *Campylocarpum*, and *Embothrium coccineum*, and *Rhododendrons* (*amoe-na*) *Royali* and President Maude. L. R. Russell took a gilt Banksian medal for his group of forced shrubs and trees, which was formed mainly of azaleas, pyrus and cerasus.

THOMAS BUNYARD, F. R. H. S.
May 15, 1907.

ELBERON HORTICULTURAL SOCIETY.

This society held its regular meeting on May 20. The principal feature of the evening was an able paper on *Herbaceous Plants* by W. D. Robertson. An interesting discussion followed. Cultural certificates were awarded to W. D. Robertson for a very fine plant of *Cattleya gigas*, some of the flowers measuring 9 1-2 inches from tip to tip and for a dish of *Asparagus Palmetto*; to A. Bauer for vase of *Gladiolus Augusta*. Other exhibitors were: A. Greib, vase of *Cercis canadensis*, P. Murray, plant *Dendrobium thyrsoideum*, J. Kennedy carnations, B. Wyckoff, *calceolarias*, F. Dettlinger, early vegetables.

The society will hold a rose and strawberry show on June 17. Arrangements are nearly completed for the second summer show on July 24 and 25. Many of the seedsmen and nurserymen have donated prizes for it.

NASSAU COUNTY HORTICULTURAL SOCIETY.

The regular monthly meeting was held on May 25, President McKenzie in the chair. Special premiums for the fall show were received as follows: Mrs. Dana, \$20, in books; Rickards Bros., \$10; W. H. Boune, \$5. B. Davis offered a prize of \$1 for one best rose at the June meeting. A committee was appointed to express the sympathy of the society to the bereaved family of John Bingham. Mr. Bingham's loss will be greatly felt by the society. Secretary Johnston read a most interesting paper on the best time to plant evergreens, which was well discussed in an instructive manner later. James Holloway presented the society with a handsome ballot box. H. Matz exhibited a splendid white seedling carnation; other exhibitors were A. McKenzie, V. Cleres, F. Mense, J. O'Brien.

AMERICAN PEONY SOCIETY.

The fourth annual meeting of the society will be held June 18 and 19, 1907, at the State College of Agriculture, Department of Horticulture, Cornell University, Ithaca, N. Y., and all consignments of flowers for exhibition must be so addressed.

Express charges on all exhibits must be prepaid, and should be so marked on the boxes, as no charges will be paid by the manager of the exhibition.

The regular business meeting will be held at 3 p. m., on the first day, June 18, at which time the society will be welcomed by either President Schurman or Dean Bailey.

An address will be made by Mr. J. E. Coit, of the Horticultural Department, who has had immediate charge of the test collection, and a paper of much value is expected.

Prof. Craig, the chairman of the Nomenclature Committee, will make a report on the progress of the work of that committee, which undoubtedly will be of much interest.

As the test collection is now in its third year a fine opportunity is presented peony growers for studying the

varieties as they grow in the field, as no where else can so many varieties be found growing together under such favorable circumstances as will be found at Ithaca.

Judges of the exhibits will be appointed at a preliminary session held previous to the regular meeting.

LENOX HORTICULTURAL SOCIETY

The regular meeting of the above society was held May 18, President Heeremans in the chair. In order to increase a more lively interest in the society among the assistant gardeners and others, it was unanimously voted to reduce the initiation fee as much as possible. It is expected that this will result in a very considerable increase in membership, as many have expressed a desire to affiliate. The co-operation of all those having the interests of the society and the profession at heart is cordially invited by the officers and members. Several questions taken from the question box created very lively discussion, among the most interesting and instructive being, "What causes hot water to circulate in pipes?" and "Does a moist atmosphere prevent red spider?" Judging from the discussion that followed there would seem to be a large majority of the opinion that a moist atmosphere alone does not prevent red spider. Two very fine vases of Gladioli, Peach Blossom and Blushing Bride, were exhibited by S. Carlquist, for which he was awarded a certificate of merit.

G. H. INSTONE, Secretary.

SOUTHAMPTON HORTICULTURAL SOCIETY.

The regular meeting of the Southampton (N. Y.) Horticultural Society was held Monday, May 13, president Clark in the chair. Seven new members were elected making a total of forty-seven active and five life members. President Clark showed a very fine collection of narcissi, also a vase of *Mertensia virginica*. Wm. Gray, gardener to Judge Russell, read a very interesting paper on melon culture. The question box also brought out the usual interesting discussions. The next regular meeting will be held Monday evening, June 10th.

U. G. AGER.

CLUB AND SOCIETY NOTES.

The Annandale rose show will be held June 12 and 13.

The New Jersey Floricultural Society will hold a rose show on June 7.

The Missouri Horticultural Society will hold a convention at Carrollton, June 4, 5, 6.

The executive committee of the American Rose Society met in New York city on May 28.

The Chicago Horticultural Society have selected the week from October 31 to November 6 for their flower show at the Coliseum.

At the meeting of the New Haven County Horticultural Society, May 22, James Bruce made a striking exhibit of chrysanthemum flowers.

The "outing" committee of the New York Florists' Club are now ready to

go to press with the official program and list of prizes for the annual games. If any one wishes to contribute an additional prize or insert an advertisement he should attend to same immediately.

BEDDING PLANTS.

A paper read before the Gardeners' and Florists' Club of Boston, by Thos. H. Westwood.

Bedding plants are the plants of the masses. They are widely distributed. They are seen in the palace and they adorn the hovel. They bring light with their cheerful coloring. They fill the air with their sweet fragrance. Their reasonable cost brings them within the reach of all mankind. They do not seem to resent the ill treatment that is so often given them, but show forth their glory under great difficulties.

We are not to enter into a discussion on growing bedding plants, but will say in passing to grow this class of plants successfully is just so much "a fine art" as it is to grow many of the more costly plants which receive such skillful treatment from the skilled artists. "Anyone can grow a geranium" is an old saying, as well as a false one. The great height that some of them attain shows us that "anyone" is still with us growing them.

There is most surely a place for the extensive use of these plants which are grown in such abundance. We commend the work of Mrs. Jack Gardner in offering prizes for this class of plants grown in window boxes.

We congratulate the people of North Easton for the work being done there. The children's garden work ought to be encouraged. The care which the child gives to the garden is well spent, both from a moral and mental standpoint and the development of plant life teaches the precious lessons to the observant child.

Here is an avenue of usefulness open to our club and we hope and recommend that some effort will be made along the line of clearing up the front-yards and back-yards of our city and suburbs, perhaps by offering prizes for the best kept yard, or by furnishing plants to those who are not able to pay for them and who wish to improve their environment. The arrangement of bedding plants is a subject about which a great deal may be said, and this seems to be an opportune time to discuss this great question. Strange to say, our amateur friends come in for a great deal less criticism than our professional friends do. The amateur arranges his plants as if they had dropped from the clouds. There seems to be an abandonment about their arrangement which is refreshing.

Let us turn and see what is being done in our ranks and let us discuss some of the bedding that is to be seen in and around Boston. Of course, where there is so much money spent, and where bedding is done on such a large scale, we naturally look to our city gardens. For enlightenment we look for effects that come as near to nature, as one may come to nature along bedding lines. We do not see

enough grouping of plants of one variety. We see a good many plants grouped, that are at variance with each other. *Ficus elastica*, *Celosia cristata*, crotons, euonymus, all in a group are certainly mixing things, and are certainly a poor example at least for educational purposes. We believe that plants of one variety in a group will give a more pleasing effect than a mixture of plants which seem to be antagonistic, the one to the other. We believe there are more geraniums grown for bedding purposes than any other variety of plant grown for bedding, and they are the most difficult to arrange, as it is so easy for the colors to clash, and to place the bed in the poorest situation we can find. The semi-doubles are our favorites on account of the lasting property of their flowers. We use a great many geraniums because we are requested to by our people. Where it is possible we plant a whole avenue or section of our place with one variety. Keep the scarlets and pinks apart. For a dark mixture we give S. A. Nutt, Alphonse Ricard, and Bishop Wood. For a light mixture we use Poitevine, any good white variety and Mme. T. Thebant. We never use variegated varieties, in fact we do not grow them. The canna is the greatest acquisition for this class of work that has been introduced for many years. They give such a tropical effect and are worth growing for their foliage alone, but some of them have very striking flowers. A group of Admiral Dewey makes a very handsome bed. A group of Alphonse Bouvier planted sixty feet apart bringing an occasional plant to the outer line of the bed which takes away any suggestion of formality, and filled in with Vernon begonias makes a superb group.

This leads us up to tropical effects, the grandest of all our bedding, when we know how to arrange such groups. *Musa ensata* makes an imposing subject for tropical beds. We do not use any variegated plants that are very pronounced but depend upon the varied shaped leaves for effect. To plant one of these groups, which must be of good dimensions, better have one good sized group, than many small groups dotted hither and thither. Place a large *musa* near the centre of the bed. Place other specimens widely apart throughout the bed. A few coming to the edge of the bed adds to its grandeur. Around the largest of the musas, group some free growing canna, around others *Cyperus alternifolius*. Large plants of *Dracena indivisa* are planted throughout the bed. *Dracena Braziliensis* with its broad green leaves, *Alocasia arborea* adds strength to the group. *Penisetum* with its beautiful plume and grassy foliage is a good neighbor to the *alocasia*. The dwarf *Cyperus* takes its place towards the outer edge with *Carex Japonica*, a dwarf gress. *Curculigo recurvata* is an interesting plant for this work, planted towards the edge where it stands sentinel over its dwarf friends. During the days when the air is not stirring this plant will sway to and fro like the pendulum of a clock, suggesting that the place is a well regulated one and always on the move.

Crotons, as bedders in the vicinity of Boston, do not develop their bright

favor. We do not think the bright coloring of the croton is suggestive of healthfulness, but instead we are impressed with the fact that nature is having a hard struggle with this child of hers, and in spite of the old dame, the child develops red spots and yellow streaks.

Our Boston crotons outside are demure looking and dignified specimens refusing to put on a gaudy attire which is certainly to their credit. We would not advise going into this class of bedding too extensively. We prefer giving the plants a little more room than they are given in some of our gardens. We do not approve of planting so closely together that the individual is merged into the whole. Give a little room to show forth the habit of the plant. At the same time this adds grace to the arrangement. We use the old *Peristrophe augustifolia* for covering the ground and the bed is finished.

Begonias are becoming very popular as bedders, and are being used in great quantities, the leader in our opinion being *Vesuvius* having a fuchsia like habit. The flowers make a quiet display. Altogether, this is a charming plant for outside work, and cannot be recommended too highly. Our Mr. Sander has a variety of *Erfordii* bearing light pink flowers, a good grower and loves the sunshine. The red *Erfordii* gives great promise. Its foliage takes on a beautiful bronze after being planted out the red flowers making a splendid combination. We predict a great future for the begonia as a bedder.

Carpet bedding is not so popular as of yore, but there is a great deal of it done and there is more of it overdone. Many gardeners make poor work of their design work. It is such a relief to one when he realizes he has not to erect a white elephant or a gate far enough ajar to allow the elephant to pass through. We believe those who do this kind of work are working along lines that are artistic and sublime, rather than the monstrous and profane. We believe there is still some of it done that is apt to cause one to express his opinion in language bordering on the profane even in this enlightened age. How ridiculous to cut out these serpentine lines in the grass, Copley Square being a horrible example a few years ago. Rather have a large bed and the design worked out with the plants. But after all your time and energy is spent, how artificial it all is and how little enjoyment one gets out of all the patience and thought that he must put into such work. I must say it takes painstaking and thoughtful study, to work out a bed of this kind, both on the plan and the execution of the work. It is needless to say that the coleus is rapidly disappearing. A large bed is seldom seen. We have seen *salvia splendens* planted through shrubbery borders. It certainly looked as if the shrubs or the *salvias* were not at home. The *salvias* were certainly out of their element and they looked it. All bedding plants should be kept away from the shrubs. We only mention a few of the bedding plants that we may confine ourselves to the reading of the paper. We might go on indefinitely discussing bedding plants, their use, and abuse.

BULBOUS PLANTS FOR MASSING AND BEDDING.

A Paper read before the Gardeners' and Florists' Club of Boston by W. N. Craig.

During the past few years there has been a wonderful growth in the popularity of hardy bulbous plants not due to any vagary of fashion, but rather to the general spread of a genuine love of flowers. Coming into bloom as they do after the long dreariness of winter they have ever had a charm for poets and lovers of nature. We cannot trot out any of the many familiar quotations which come to mind, but must rather pass on to enumerate some of their good qualities. Unlike the fashionable orchid and the carnation needing glass structures and skilled labor for their culture, these hardy bulbs will thrive in almost any soil and situation. Some of them are a trifle more delicate than others, but a good selection may be made of perfectly iron clad varieties which will succeed with almost any one.

For bedding purposes tulips and hyacinths are the two predominant bulbous plants. The first-named lead in popularity, their comparative cheapness, ease of culture and great color varieties being the chief causes of their occupying a foremost position. Where an extensive system of bedding is carried out in individual beds, massing separate colors in a bed is the most effective, the softer and lighter shades should however, always predominate over the brighter ones, no matter whether the intervening spaces be of gravel or grass; the dark pinks, scarlets, crimsons and purples should be placed farthest away from the house or from the principal observation point. At a distance these higher colors are telling, more so than the softer hues. If a solitary bed on a lawn near a house is planted one solid color it soon becomes monotonous, however, and a mixed arrangement will be in better taste and prove well-satisfying. It should ever be borne in mind that we do not plant always to gratify our own tastes and desires, but rather those whom we serve. Gardeners to be ultimately successful must first consult the wishes and desires of those by whom they are employed; it is in their power to make many suggestions which employers will be glad to receive and also introduce little innovations which will from time to time prove pleasant surprises; but we are digressing from our topic.

A few of the best of the early bedding tulips are: *Chrysolora*, *Proserpine*, *Joost van Vondel* (white), *Keizerkroon*, scarlet and white *Pottebakkers*, *Thomas Moore*, *Pink Beauty*, *Queen of the Netherlands*, *Couleur Cardinal* and *Prince of Austria*. In doubles a few pleasing varieties are *Couronne d'Or*, *Murillo*, the *Tournesols* and *Imperator Rubrorum*. Following the early single and double tulips and excelling them in many respects are the late-flowering varieties in many beautiful colors, the *Bybloemens*, *Bizarres* and such late sorts as *Picotees*, *Gesneriana*, *Bouton d'Or*, *Golden Crown*, *Retroflexa*, *Vitellena*, *Shandon Bells*, and *Elegans*. As a rule these have much longer stems than the early varieties and for cutting are splendid.

While some of these are higher priced than the early tulips we find the bulbs do not deteriorate from year to year in the same ratio.

In addition to their use in solid beds tulips are excellent for mass effects along shrubbery borders. They may be used either in long bands of irregular width or in clumps of fifty or more bulbs each. If used in bands it is best to use the softer shades for this purpose, keeping the darker colors for massing between shrubs a little farther back.

Hyacinths are much higher priced than tulips and while very showy they have never attained any such popularity in America. For formal bedding they are very good, but their extreme stiffness makes them unsuitable for bands or clumps in shrubberies; their stalks, being very brittle, become easily broken causing them to look untidy unless securely staked. When mixed they do not present a pleasing appearance, the colors clashing badly, but when in solid beds with a ground covering of double white daisies or violas, they are very effective; blooming earlier than tulips, they are sometimes used in the same beds with them. If the two should perchance flower together the result is not unsatisfactory. One of the most striking examples of how not to do it was noticed on a Commonwealth avenue lawn the past week. A mixed bed of tulips, hyacinths and narcissi of every imaginable color were flowering together and the result was simply distressing. Single bulbous flowers are in about every case preferable to doubles, and double hyacinths are distinctly inferior to single ones in every way. A few good bedding hyacinths are: Red—*Gertrude*, *Robert Steiger*; white and blush—*Grandeur a Merveille*, *La Grandesse*, *Baroness van Tuyl*; blue—*Charles Dickens*, *Baron von Tuyl*, *Regulus*.

The third important bulbous class we will refer to are the narcissi. A quickened interest in these is due in some measure to the many beautiful introductions of the hybridizers and to other forms secured from the Pyrenees and other homes of the daffodils and the energy of the collectors. In Great Britain the culture of these increases enormously year by year. Where a comparatively few years ago growers had one to ten beds, they now have acres, some of the larger cultivators having 10, 20 to 50 acres devoted to them and marketing millions of flowers and bulbs annually. For cutting they are in season unrivalled, travelling well and lasting long in water. The colors may be less wide than those in tulips, but they embrace the most exquisite shades and harmonies unrivalled for delicacy and beauty by any other flower. Added to this is a perfume delicious and unique, and surely here is a combination strong enough to arouse the enthusiasm of any flower lover.

Narcissi are not used in our public gardens and on private estates for formal bedding as their merits warrant. Their exceeding grace far exceeds that of the tulip and hyacinth. Unlike the two latter bulbs they in nearly all cases improve in flowering qualities year by year and are impervious to showers which will break down hyacinths and damage tulips.

TULIP DISPLAY IN THE SUNKEN GARDENS, FAIRMOUNT PARK, PHILADELPHIA.

From a photograph by a staff photographer of the Philadelphia Press.

Fine as they are in formal beds it is by using them in irregular bands and masses in shrubberies or mixed flower beds, that the best effects are to be had. Once planted they are best left undisturbed for three or four years, when it will be necessary in many cases to lift and replant them. Such varieties as poeticus, all the Leedsii save forms of *Incomparabilis* like Figaro, Sir Watkin, Stella and Cynosure, and that beautiful variety *Barrii Conspicuus*, increase faster than the trumpet types, although the robust Emperor and Empress spread quite rapidly while the magnificent newer varieties like Mme. De Graff and Glory of Leyden have surprising vigor. Bulbs of the last-named this season carried five flowers each, some five inches in diameter. But even where some of the trumpet section do not survive more than two or three years the cost is so low that it is easy to replace them.

For naturalizing in grass land the Leedsii and poeticus section are the most reliable, the last named succeeding specially well on the margins of streams and lakes where the ground is damp. In such a location they grow with wonderful vigor and spread surprisingly. Some of the best narcissi are: Yellow Trumpets—Glory of Leyden, Emperor, Henry Irving, Golden Spur. Bicolor Trumpets—Victoria, Empress, J. B. W. Camm. White Trumpets—Mme. De Graff, Moschatius. *Incomparabilis* section—Sir Watkin, Figaro, Guyther, Beauty. *Barrii* section—Flora Wilson, *Conspicuus*. Leedsii type—Duchess of Westminster, Mrs. Langtry, Minnie Hume, Duchess of Brabant. Poeticus section—ordinary type, *Ornatus* and *Poetarum*.

As the newer English varieties become less expensive and are introduced

here their exceeding beauty will enchant bulb buyers and the day is not far distant when narcissi will be more extensively cultivated than tulips are and will become the most hardy bulb in America.

To lay down a truly artistic garden is about as difficult as arranging the materials for heightening the effect of the landscape but spite of all this the whole idea of bedding out is good and it has done more to make flower lovers and buyers than any other branch of horticulture. We think also that bedding out can be brought out in such a way as to not even displease those who may be continually carping after a close imitation of nature. We all know that natural gardening at this season is far more satisfying and restful to the genuine plant lover than any stiff floral arrangements, no matter how gaudy they may be, but there are multitudes who prefer the latter to the former, and both systems, therefore, should be given their proper places.

The necessarily brief time allotted to us this evening forbids any reference to Spanish or English iris, crocus, snowdrops, chionodoxas, scillas and other bulbous flowers, all of which have a place in every well regulated garden.

In conclusion we would say that the garden without bulbous flowers lacks its brightest jewels. No flowers are so dear to the heart as the class we have briefly referred to. In bulb bedding the flowers do not remain so long as in the case of their summer successors, therefore simpler combinations are more desirable, but even effects a little harsh pass away ere they become nauseating.

Planting in October or early in November, 4-5 inches deep, given a light

mulching of leaves or strong manure after the ground freezes, which is to be removed early in April before growth becomes too far advanced, bulbs will winter well and provide a feast more enchanting and more heart satisfying than can be had from any other class of bedding.

THE NEEDS OF THE NEW YORK BOTANICAL GARDEN.

Efforts are being made by the board of managers of the New York Botanical Garden to obtain special funds to supplement the ordinary income of the institution. These funds may bear in general such personal designations as the contributors may wish to indicate.

Twelve foundations which are greatly desired are specified as follows: Exploration fund, for which \$250,000 is needed; horticultural fund, \$100,000; library fund, \$50,000; conservatory fund, \$50,000; herbarium fund, \$50,000; lecture fund, \$25,000; fund for the illustration of "North American Flora," \$30,000; scholarship funds, several foundations of from \$10,000 to \$25,000; laboratory fund, \$20,000; fund for horticultural prizes, \$10,000; fund for botanical prizes, \$10,000, and research funds, are all set forth in a statement signed by Addison Brown, chairman of the executive committee of the board of managers.

CATALOGUES RECEIVED.

The Julius Roehrs Company, Rutherford, N. J.—A beautifully illustrated catalogue of orchids, palms and other choice exotics, besides ornamental shrubbery, bays, conifers, etc. A colored illustration of *Dendrobium Phalaenopsis* adorns the cover.

A NEW LEADER IN EDUCATION.

The committee on Course of Study and Faculty of the Board of Trustees of the Massachusetts Agricultural College have voted to recommend to the full Board the election of Prof. W. R. Hart, of the Nebraska State Normal School, as Professor of Agricultural Education at the Agricultural College.

Prof. Hart is a man of about fifty years of age and is considered one of the strongest men in the educational work in Nebraska. He spent his boyhood on an Iowa farm and received his education in Iowa Wesleyan University, Iowa State Law School, and the University of Nebraska. He had his master's degree from the latter named institution. He has had teaching experience in country schools and also in high school and normal and college work. He is a member of all the educational associations in Nebraska, has contributed numerous educational articles, and written several monographs on educational topics.

The department to which Prof. Hart has been called is an entirely new one at the Agricultural College and is a very important departure. Prof. Hart will be expected to make a thorough study of all phases of agricultural education and to be of especial help to the teachers, principals, and superintendents of the State in introducing agriculture into the elementary schools and high schools, and in the establishment of agricultural high schools. The Summer School of Agriculture, to be held for the first time during the coming summer, promises to be a great success, and is to be part of the work of this Department of Agricultural education.

It is believed that the Massachusetts Agricultural College is the first institution in the United States to organize this work on so broad a foundation, although many other colleges have introduced various phrases of instruction for those desiring to teach agriculture.

Prof. Hart has extremely complimentary testimonials from such men as Chancellor Andrews of the University of Nebraska, Dr. A. E. Winship of Boston, Dean Bentley of Clark College, Worcester, besides a large list of prominent school men in the State of Nebraska.

He will assume his duties July 1 and be present at the Summer School of Agriculture. He will not take up his regular residence in Amherst, however, until the opening of the new college year. He is married, but has no children.

NEPHROLEPIS

Piersoni Elegantissima

The Tarrytown Fern

A good stock in all sizes on hand at all times. A splendid seller and money-maker. Large specimen plants, ready for immediate sale: 6-inch at 75c and \$1.00 each; 8-inch at \$1.50 and \$2.00 each; 10-inch at \$3.00 each; 12-inch at \$5.00 each; 14-inch at \$7.50 each; 16-inch at \$10.00 each. Also fine young stock for growing on, 2¼-inch at \$8.00 per hundred.

F. R. PIERSON CO., Tarrytown-on-Hudson, N. Y.

WHOLESOME CHESTNUTS.

Now it is planting time, but even if it is do not plant anything outdoors nor advise a customer to plant anything that is not well hardened in preparation for changes of temperature and cool winds which may come yet before summer.

Of the main stock of bedding plants, geraniums are perhaps the easiest to harden and get ready for planting, and they should in consequence be planted about the first. I am not referring to such plants as pansies, which should have been planted a week or two ago, nor to many kinds of annuals or biennials, such as dianthus.

Plant every bed with one kind or variety, and one only. If you have another highly prized variety it can find a place somewhere else without sacrificing the effect of both.

The nearest to approach geraniums in utility are begonias. The Vernon type is exceedingly desirable and showy when planted in separate colors. The true red Vernon, which is the best dwarf bedder for all practical purposes, stands sunlight better than any of the others; in fact, the foliage only assumes the beautiful bronze color for which it is noted when the sun gets at it easily. Tuberous begonias succeed best when planted in partially-shaded situations and in good soil. It will be well also to contrive some light temporary shade to protect them for a few days after planting.

Heliotrope is oftener seen in spaces reserved for cut flower plants than in beds for decoration, but why, I don't know. Its beautiful color and delicate fragrance make it desirable for vases while it lasts, but it does not last long after being cut. In a bed it not only looks as well as most things, but it also perfumes the air as few other things do.

The compact blue lobelias are excellent little plants worth trying in beds by themselves. Fuchsias are grown in larger numbers this year than last, and still the supply is not equal to the demand. Don't forget that this

fall or next spring. The old-fashioned common cannas were all right, and are all right still, but are not in it with those newer sorts with foliage just as good as the others and flowers rivalling the choicest orchids in color and form; they are just right for beautifying any place big or little.

It is too early to plant coleus, achyranthes or alternanthera outdoors, but they should be got in shape as soon as possible. C. Verschaffeltii is the best red coleus for bedding, and Golden Bedder the best yellow. There is a golden Verschaffeltii, but it is not such a desirable variety either in color or form as Golden Bedder.

Bedding stock intended for sale, especially geraniums, should not be left uncovered, particularly at night, as this has a decided tendency to keep them from flowering at this time of the year. Give these plants all the air necessary by lifting the sashes top and bottom, or even removing them during the day, but cover the plants at night.

A great many growers grow English ivy in partially shaded houses; it then stands to reason that it is necessary to protect it for sometime from the full sunlight after it is taken out of such a house. English ivy can be made useful in countless ways. If fine specimens of nephrolepis are wanted, pick out a few of the most promising and put pots or stands under them so that the fronds can steer clear of everything; water carefully and in a few weeks you may have plants to your heart's desire.

Gloxinias do not thrive well when they are fully exposed to sunlight, nor when the glass is densely shaded or when the plants are at a considerable distance from the glass; these plants succeed best when placed near the glass with the glass very thinly shaded. Gloxinias need very careful watering, but will not stand hard syringing.

Don't let the primulas and cinerarias out of your mind; poinsettias are worth all the labor bestowed on them from now; Lorraine begonias are no doubt hard to grow and but few grow them well, but never mind that; go ahead.

PITTSBURG GARDENING NEWS.

The unseasonable weather in April has had disastrous effects upon hardy shrubs and herbaceous plants in and around Pittsburgh. In the more exposed, dried positions privet has survived, but in low lying situations privet and many hardy shrubs are killed to the ground. Herbaceous plants have suffered severely. Out door bulbs have been unsatisfactory; Narcissi were frozen as soon as they opened; tulips have been short and fugacious. The low temperature still continues, retarding summer bedding operations.

One of the finest sights in Pittsburgh is a long border of Phlox divaricata at the Pitcairn place. Mr. R. Smith, the chief gardener, thinks this one of the best subjects for spring flowering. It requires very little care. After flowering, the plants are lifted and laid aside until the busy bedding season has passed, then they are divided and planted in rows in the vegetable garden in well prepared rich soil and planted in their flowering positions late in the fall. Phlox subulata is used as an edging and treated in the same way. The effect is really fine.

Mr. W. Thompson, gardener at the Craig place, Sewickley, has at present some fine plants of Cattleya gigas in flower. He has also some very large plants of Cattleya Skinneri which are almost finished, but which have carried some magnificent heads of flowers.

NEWS NOTES.

Snow flakes fell on Boston Common on the evening of May 28.

The business of the Central Greenhouses, Sandusky, O., will be offered for sale on account of the illness of the proprietor, D. J. Mackey.

H. P. Potter, Wilmington, Del., has directed the work of beautifying the grounds around the city hall with plants, an innovation that is attracting much attention.

The Florists' Hall Association completed twenty years of existence on June 1st, 1907. Every claim has been paid and its financial standing is O. K. In addition to a large emergency fund the association has a reserve of over \$17,000.

JOHN F. ESLER, Sec'y.

We learn from Arthur Cowee, the gladiolus specialist of Berlin, N. Y., that although the season is unusually late he will undoubtedly conclude planting his bulbs not more than a week later than ordinary, and the acreage will be practically the same as last year.

The Grand Rapids Greenhouse Co., contemplates repairs and improvements of the Stover property at Glenville, Mich., which they have purchased and will enter into possession of on July 1. The plant at Grand Rapids will be increased by 100,000 feet of glass, and brought up to date in every particular.

The high wind on May 19 blew down the end of one of the largest greenhouses of J. H. Dunlop, Toronto, and a portion of the house about 240 feet collapsed. Two adjoining houses had

been removed to be replaced by a new structure. No damage was done to the stock as it was in readiness to be moved the next day.

Julius Roehrs Company have a new rambler rose which is sure to make a sensation when introduced. The flowers are single, bright pink fading to white at the base of the petals, fragrant, very persistent and borne in enormous trusses. It appears to be also a continuous bloomer for, simultaneous with the blooming, buds of all sizes are in sight at the tips of the new growths. The foliage is very glossy and the plant is hardy. It is yet unnamed.

OBITUARY.

Dr. Joseph D. Mansfield, born March 22, 1817, died in Wakefield, Mass., May 22. He was one of the original members of the Wakefield Horticultural Society.

William O'Reilly, who has made the Cousino Gardens at Loto, Chili, one of the most interesting gardens in the world, died at his home in Parque Cousino on Jan. 7. He was of Irish extraction and received training in the Kew gardens.

William M. Cottle of Waterbury, Ct., aged 65, and little Arthur Gordon Mieliez, the 4-year old son of his foreman, Adolph Mieliez, were struck and instantly killed by a train while driving across the tracks at Brown's crossing on the Watertown branch of the New Haven R. R. Mr. Cottle was a prominent Mason and Odd Fellow and has been in the florist business in Waterbury for the past twelve years.

PERSONAL.

Among recent visitors to New York was Frank H. Houghton, of Houghton & Clark, Boston.

Miss Zana Ariel Shaw, daughter of J. Austin Shaw, and Mr. Percy Noel of the New York Commercial staff, were married on May 24.

Charles Loechner of Yokohama Nursery Company is again able to be at his desk after a long confinement in the New York German Hospital.

A. Schultheis and family will sail for Europe on the Kaiser Wilhelm der Grosse on July 2. Mr. Schultheis has entirely recovered from his severe illness of last season.

MOVEMENTS OF GARDENERS.

J. Ahearn has been appointed gardener for Henry Clews, Newport, R. I., to succeed James Murray.

William Austin, lately assistant to Mr. James Boyd at "Beechwood," Newport, has been appointed gardener for Mr. Moffet at Islip, Long Island.

John Roach, for some years gardener for Mrs. O. H. P. Belmont at Hempstead, Long Island, visited Ireland last year with the intention of staying over there permanently, but our latest information is that he has returned to Hempstead and the employment of Mrs. Belmont.

STILL IN BUSINESS.

Our Montreal note in issue of May 18, stating that Mrs. Graves had retired from business, proves to have been unfounded. Mr. Graves died some two months ago, but his widow is still conducting the business at their greenhouses in Westmount.

NEWS NOTES.

I. E. Coburn, Everett, Mass., has opened a retail store on Bromfield street, Boston.

Miss E. H. Canfield, for many years with J. I. Gurney & Co., has assumed the management of the new store and greenhouse at 1889 Dorchester avenue, Dorchester, Mass.

Fire, caused by the explosion of an oil stove, destroyed the potting shed and connecting corridor of John Young's greenhouse at Bedford, N. Y., on May 24. Loss fully covered by insurance.

One of the most striking floral effects is seen in Small's window, Broadway, New York, this week—a vase of tall tiger lilies of remarkable growth and finish, far excelling anything one sees when this lily is bloomed outdoors. Florists looking for something out of the ordinary line of decorative material should make a note of this for next season. *L. tigrinum* Fortunei splendens is the finest variety.

The new store of W. H. Donohoe, under the new Hotel Seville, 17 East 28th street, New York, is a very handsome and convenient establishment, area 25x67, and a basement room of equal extent. The walls are covered with Tapeastrola, a sort of burlap in dark forest green, and mirrors are freely used. The window floor is of decorated tile and the store floor is of polished quartered oak.

BUSINESS CHANGES.

Mrs. Mary Weisenberger has purchased the business and greenhouses of C. H. Hollied, Maryville, Md.

W. E. Ingalls, Bridgeton, Me., who met with serious loss by fire recently, has offered his greenhouse for sale and will give up the business.

The Lakeside Floral Co., Inc., Houghton, Mich., intends to tear down and remove to Chassell the Lutey greenhouses recently purchased by them.

John Sambrook of Sambrook Bros., Troy, N. Y., has leased the greenhouses of Arthur Cowee, Berlin, N. Y., and Peter J. Shroder is in charge. This range consists of about 20,000 feet. Roses and carnations will be the specialty.

CUT FLOWER MARKET REPORTS

BOSTON Memorial Day, always the biggest day in the year for the Boston wholesale flower trade, has far outstripped its record this year and reached a volume and value of goods moved never approached by any holiday, under any circumstances, heretofore. This, notwithstanding the unfavorable conditions for securing needed material which, if it could be had, for all demands would swell the total sales to a much greater extent. The usual outdoor flowers of the season are missing. Lilacs are the main reliance in the outdoor class this year; tulips of the late varieties are eagerly bought up; poet's narcissus is about the only other garden flower available; these are in plentiful supply. Stocks and astilbe, especially forced for the occasion, are in the market but in so green a condition as to be of little consequence. Pansies at \$1.50 to \$2.00 a thousand have been disposed of in enormous quantities. Carnations are in active demand and have experienced a considerable stiffening of values but roses have not advanced to any extent and, as might be expected, the lower grades have found the best sale. Growers and wholesalers have been working early and late and Memorial Day, 1907, has certainly made a new high record. People that are usually wholesale sellers at Christmas and other holidays are buyers now.

BUFFALO Business the previous week was good to a certain extent. Flowers were not overplentiful. Beauties have been in good supply together with Richmond, Killarney, Chatenay, Liberty, Bride and Bridesmaid, the latter showing much mildew but the color has been superb. A good lot of ordinary stock was handled and sold better than previous weeks. Carnations of the colored line were a little scarce at times but plenty of white could be obtained. Outdoor stock has not been plentiful. A good portion of the tulips are of poor quality, short stemmed and small flower and show the effects of frost. It looks as if the market will be short on outdoor stock for Memorial Day, as lilacs, deutzia, lily of the valley, peonies, etc., will not be in bloom. Callas and Harristi are scarce and good demands have been had on other flowers. Wood ferns have not been too plentiful while adiantum, Sprengeri and other greens sold well.

COLUMBUS The weather has at last turned warm, and it really seems as if growing conditions were at hand. Stock of all kinds is more plenty, especially carnations, which are always our main-stay. Roses are good, also, and as everything can now be sold at most reasonable rates, the over-the-counter trade with all the craft has been unusually good the past week. There will be an especially large business done for Memorial Day, as indicated by the large number of advance orders that have been placed. The one drawback will be the lack of outdoor stock; the trade for this holiday demands large bunches of flowers and at reasonable rates; this will be difficult to do this year with so little hardy

stock. The seedsmen are very busy with retail counter trade and bedding as well as vegetable plants. Trade in every line is very satisfactory.

DETROIT While business in general is not very brisk, the daily supply at our wholesale houses cannot cope with the demand. The extreme bashfulness of gentle Spring is to be charged up with this general lack of cut flowers. This season just passing has been a great trial for the old principle of supply and demand as price regulators. The growers had an extremely poor cut all through the winter as far as quality is concerned. In looking over their financial harvest though, the result is very gratifying because there never was a glut, but always good prices instead. Our cemeteries will look rather desolate this Decoration Day. The florists attending to this line of work have not been able to do anything worth speaking of on account of weather conditions.

INDIANAPOLIS The long looked for seasonable weather has at last come and placed the market and trade conditions on a better level. The planting branch of the business is now quite active. Trade from the retailer's view was never better at this season of the year. Beauties are fine but not over plentiful. Teas still hold their own as to quality and supply. Carnations are more than plentiful, the quality keeping up well. Abundance of fine sweet peas are on the market. Gladioli, lilacs, irises, and peonies are to be had in limited quantities. Very few outdoor flowers can be counted on for Decoration Day. The market is short of good ferns, while smilax and other greens are equal to demand.

NEW YORK Weather conditions for the past few days have been unprecedented for the season, and the result has been a situation unparalleled in the flower market of this city for Memorial Day. The outdoor material usually so abundant as to spoil any tendency to special activity in florists' flowers is missing, and lilacs and outdoor lily of the valley, ordinarily past and gone at this date, are just beginning to come in. No extraordinary preparations for a demand having been made, this market actually finds itself in worse shape than is the case in other centres usually less favored, but which have access to quantities of stocks, astilbes and other material brought forward in heat for Memorial Day exigencies. Consequently there has been an onslaught on everything from outdoor or indoor sources, and the wholesalers have been cleaned out with surprising rapidity, while orders for thousands upon thousands of carnations have been turned down for lack of goods with which to fill them. Of course this condition cannot last long, but it will require a series of warm days to bring about any great demoralization in the market. One consequence of the cold spring has been the continuance of society people in town to a later date than usual, and the retail business is reported as

excellent all around. A few good violets are still being sent in and one grower at least is cutting a nice crop of chrysanthemums.

PHILADELPHIA Conditions here have greatly improved since last report. Stock has shortened up on account of the dull weather with no diminution in demand, the consequence being a much healthier tone all round, not so much in an increase of prices as in a general cleaning up of arriving shipments, there being no such transactions as twenty thousand Brides at twenty cents a hundred as took place last week. Beauty roses moved well, the outside demand being brisk and keeping the market in healthy condition. Brides moved better, but outside of a clean-up little improvement took place, prices remaining about stationary. Bridesmaids were off both in color and quality. Richmonds went well especially in the shorter grades. Killarneys were in fine shape and among the best sellers in the market. The carnation market is in a very healthy condition and the outlook is for shorter supplies. There will not be nearly enough to go around for Decoration Day trade. Sweet peas are in good demand, but the quality is nothing extra. Lily of the valley is fine and going much better. Gardenias are plentiful and cheap, a great deal of southern stock arriving. The iris market has also been spoiled by southern arrivals. Cattleyas are about the only orchids that cut any figure at present. Peonies are late. Nothing doing this side of Washington. A big loss to the peony men of Washington, Baltimore and Philadelphia. All our supplies that amount to anything are coming from farther south. The combination of dull weather and a late season makes Decoration Week this year exceptional—with a scramble for stock all round both local and shipping.

SAN FRANCISCO There is very little news to tell about San Francisco, except that we are setting our calamities too close together. We were just getting our first breath after the fire and were beginning to settle down to business when the street-car operators, telephone operators, iron workers—in fact, about half of the working classes go on strike for higher wages and shorter hours. Of course every tradesman, especially the florist, is doing very little business. Flowers are not plentiful and would bring good prices if it was not for above mentioned conditions.

TWIN CITIES The cold, disagreeable weather has affected the retail trade to a large extent. One or two bright days during the week gives us a good chance for comparison, but trade this spring will undoubtedly fall short of a year ago, from the retailer's point of view, and what affects the store man must also affect the grower and wholesaler. Spring flowers are practically an unknown commodity. The stock at the present time is about the same we have had all winter. A few early tulips are offered; the de-

NEWS NOTES.

Cut blooms of rose Lady Gay are seen occasionally in the stock of some of the New York retail flower stores and are used with graceful effect in artistic decorative work. The big trusses of pink flowers are very showy.

Traendly & Schenck have completed a substantial addition to their wholesale establishment in West 28th street, New York, by building over the yard in the rear, an area of about 25 feet square. It is well-lighted and ventilated and makes an excellent storage room for flowers.

CUT FLOWER MARKET REPORTS.

(Continue from page 720)

mand for them is so slight that it hardly pays to handle them. Roses and carnations are equal to the demand, there being no surpluses. Decoration Day business from present indications will be heavy, especially from outside towns. The appropriation in the cities has been cut considerably in comparison with former years; a much heavier trade can therefore be expected from citizens in general.

As a result of the sudden changes in which cold, rainy days predominate, outside plant life can only struggle for its existence. Bloom is out of the question—that is, marketable bloom. Owing to these conditions carnations are holding their own in both quality and price. Sweet peas are also fine and sell readily. Peonies, which are usually gone at this time, are just beginning to bloom and are of very inferior quality. Outside roses, in the more sheltered places are producing some bloom, but there will be a most distressing shortage for Decoration Day.

?
Is Your Name In The Above List? If Not, Why Not?
?

WHICH ARE YOU WATCHING the bung hole or the spigot? If anyone should point out to you that while you were watching so carefully that half pint coming out of the spigot, three gallons were pouring out of the bung hole—you would stop the leak at once, that's sure. Now tell us where is the difference in buying an all-cypress house with a price that sounds cheap when in a year or two you begin to put your profits into repairs instead of in the bank? There's no house built that will grow such plants as our Iron Frame House, or that is as downright cheap in the end. We want you to take this argument up by mail—we'll answer your letter that very day.

Here's Another One

This letter from a well known and prosperous Massachusetts florist should interest you.

MR. W. W. CASTLE,
Boston, Mass.

Waverley, Mass., Apr. 24, 1907.

Dear Sir:—

It is a pleasure to recommend your Circulator for the very efficient work it does for me.

I have two greenhouses each 200 ft. long piped for steam with 1½ in. pipes, and can operate them perfectly with hot water by using the Circulator; in a very short time it brings the returns nearly as hot as the flows. As I have two of the Circulators in use under different conditions, I am well able to judge of the work they are capable of doing, and would not like to part with either of them.

Yours truly,

(Signed) WILLIAM W. EDGAR.

Watch this space next week. We shall present some more letters equally convincing.

In the meantime write for particulars of our new

Steel Plate Hot Water Boiler

built especially for greenhouse heating. Piping and fitting done according to most approved methods and satisfaction guaranteed. Perfect circulation in all kinds of weather absolutely assured by the use of our

RANGE AT POMFRET CENTER, CONN.

This is a section of the up-to-date Iron Frame rose house that we are adding to the range. The man who builds now is sure of having the house up in time for early stocking.

HERE YOU HAVE GREENHOUSE BUILDING AT ITS BEST! A nicely balanced arrangement; an effective contrasting of the straight and curved roofs in an almost perfect location. It forms one of the most important and ornamental features of the grounds, and is just in sight through the trees, from the residence. The palm house, general greenhouse and carnation house form the center, which is flanked on the left by a two compartment, curvilinear grapery and on the right by the orchard house for potted fruit. Orchard houses are constantly growing in favor because of the double purpose for which the house can be utilized, and the almost immediate returns the fruit gives. If you are thinking of building look thoroughly into our kind of houses, or better yet, see a salesman. Lord & Burnham Co., Greenhouse Designers and Manufacturers, 1133 Broadway, cor. 26th Street, New York. Boston Branch, 819 Tremont Building; Philadelphia Branch, 1235 Filbert Street.

While Saying So Much in a detailed way of exactly how the U-Bar itself is constructed, we have neglected to show you a section from which to get a line on the proposition in general. This 18 foot section makes plain the simplicity and lightness of construction better than any amount of our talk. See how clean cut and perfect is the connection of sill and U-Bar. A single center column with branch stays is all the support necessary. The ventilating hand wheel is placed most conveniently, and the rod and mitre gears under the bench are entirely out of the way. The benches are galvanized steel frames, tile bottom and either slate or cypress sides. It is beyond all comparison the most perfectly designed and equipped greenhouse made. The new catalogue tells you exactly how and why it's made the way it is made. Send for it. **Pierson U-Bar Company**, Designers and Builders U-Bar Greenhouses, Metropolitan Building, Fourth Avenue and 23rd Street, New York.

American Rhododendrons

OVERPLANTING OF *R. MAXIMUM*

While in the United States last autumn, on a business trip, I visited a number of nurseries, and also a considerable variety of private and public gardens. I have naturally been very interested in the use of the plant with which I am most closely associated, viz., the rhododendron. I was particularly struck with the large quantities of the native variety, *R. maximum*, that are being planted, and it has occurred to me to ask if this is altogether a wise step. The great question in front of the man planting rhododendrons is, of course, that of hardiness, and without doubt the variety *maximum* has much to recommend it in this respect, but on the other hand it has been amply demonstrated that certain of the hybrids, and more particularly those which have their origin either from *catawbiense* or *maximum* are, if planted with a due regard to certain conditions, of sufficient hardiness to warrant their use, and, while not condemning *maximum*, it must be borne in mind that the latter has practically only one shade of color, and if used indiscriminately, is likely to become as monotonous as the *Rhododendron ponticum* in England, which really, except in isolated cases, has only the merit of cheapness to recommend it, and, where used without the addition of the hybrids giving color, is of no advantage whatever in garden effect. It is this point which strikes me so much in many American gardens, which I have seen—the use of *Rhododendron maximum* exclusively, where such splendid effects of color could be got with the addition of a certain number of hybrids in groups.

SELECTING A FAVORABLE POSITION

In America where the climatic conditions are much more *in extremis* than in England, it is apparent that great care must be taken in selecting a position suitable

Field Culture of Rhododendrons.

for rhododendrons, and in my opinion it should be chosen so that, always bearing in mind to avoid exposure to wind, and more particularly to draughts of any kind, they should have a northern aspect. This may seem contradictory for any shrub which may be classed as delicate, but my experience tells me that when given a northern exposure, the tendency is for the plant to remain for a longer period in a dormant condition, in which state the rhododendron and many other shrubs are perfectly hardy and will not suffer so much as when planted in a warm situation which induces a rising of the sap and an inclination to precocious growth before the night temperatures have ceased to be nearly as low as in midwinter. Again, a position which ensures shade, not, however, too dense, should be chosen, and in any case the early morning sun must be avoided as the beds of rhododendrons, when subjected to a low temperature of the air and with the sun melting one side of the bed while the other remains frozen, are very perishable and, even if the foliage of the plants remains uninjured under these conditions, the flower will be lost and consequently they will have no greater value than any other evergreen.

Another point which it is most desirable to emphasize is that, naturally, the rhododendron is an undergrowth as a general rule, and subsists not only on its own decaying foliage, but on other vegetable refuse such as the foliage of forest trees, and consequently in garden use proper care should be taken in the first place to see that it has such food as peat or leaf mould or some good fibrous matter to subsist on in accordance with natural conditions; and, secondly, that when established, such food should be supplied to plants from time to

Rhododendron Gomer Waterer.

time as a surface dressing, and, in America where such hot spells are so common, a moulding of leaves and decayed manure which will keep the roots from scorching, and, in winter, will serve to protect them from extremely low temperatures.

CHOICE OF VARIETIES

As regards what varieties can be used with comparative safety, I have great faith in the experience which certain kinds have had and withstood for a period of years, at the Arnold Arboretum. This more especially applies to Boston and the New England section. In other parts, viz., around New York and perhaps more so in Philadelphia, a considerable number of other kinds have been found to stand perfectly well. I am somewhat loth to publish the names of certain kinds, from obvious reasons, but I think I can safely give such names as *Album Elegans*, *Everestianum*, *Charles Dickens*, *H. W. Sargent*, and a few others, as having stood for so many seasons as to be practically safe, although, no doubt, in common with many other evergreens, such as the mountain laurel (*Kalmia latifolia*), and even the hemlock and white pine, they were found to have suffered during the extremely severe weather experienced some three years ago in the States. This should not, in my opinion, deter people from planting again, as the damage done that season proved to be, in many cases, only temporary and the plants recovered during the ensuing summer.

I have noticed, to my great regret, in many places I have visited, that where hybrids have been planted, although a fair percentage of the proper hardy varieties are to be found, yet there is a quite large proportion of tender varieties which, in America, are absolutely useless except to be treated as tender plants and, as such, to be protected in the winter, and consequently after even an ordinary season, without any great extreme of temperature, it is found that many have been injured, the result being that the planter is naturally dissatisfied, and at once comes to the conclusion that all rhododendrons are unreliable for garden work, and so either plants some other flowering shrubs in their place, or leaves a blank space. Now, this is a great

pity, and I attribute it to the fact that the really hardy varieties being somewhat scarce, some nurserymen, with rather elastic consciences will accept and execute an order, even incorrectly, rather than admit inability to supply. The intending planter should be most careful to ask for, and see that he gets those kinds only that have proved to be thoroughly reliable, and also when he has them to see they are planted in the proper position, and I feel sure that under these circumstances the use of the hardy rhododendron with its double effect of flower and evergreen foliage is only just beginning.

A few words as to the tender varieties: there are among the hybrids many very lovely varieties, which, even if they are not suited for planting out permanently, are so fine as to warrant their use in other ways with great effect, such as in tubs and sheltered in the winter. This is done with bay trees in order to give certain effects, and why should it not be done with rhododendrons to give another effect? Large bushes or standards can be procured, and I am of opinion that with a rational treatment they would be found very easy plants to handle, and in that way the more beautiful hybrids can be seen and used in American gardens. Other kinds as, for instance, the *R. Pink Pearl* which, when first shown in England created almost a sensation in the horticultural world, or the variety *Gomer Waterer* may be used to very great advantage as pot plants, and fully deserve to be known as well in America as with us. The subject of rhododendrons is a very large one, and I do not propose to go into any further sides of it, but I shall look forward to the future greater use of this beautiful evergreen in American gardens and hope that my views may turn out to be correct. I feel sure, if the planter insists upon being supplied with the really hardy varieties, he will not be disappointed, and more than this he will be conferring benefits upon the lovers of gardens generally.

Gomer Waterer

American Nursery, Bagshot, England.

The Rhododendron

SOME RHODODENDRON HISTORY

John Wilmore of Oldford near Birmingham, England, who was a most enthusiastic amateur horticulturist some seventy years ago, delighted in making experiments with various species of plants in order to produce new and improved varieties. He turned his attention particularly to those families which were the most difficult to hybridize, as for instance the ericas; of these he succeeded in raising the one which bears his name, "*Wilmoreana*" which is a favorite at the present day. He also used his talents on the rhododendron and assisted my father in his efforts in the same direction with this noble evergreen.

Taking the Indian species, *R. arboreum*, it was used to pollinize several other species which were known to be quite hardy in Great Britain, especially *Catawbiense*. The flowers of *arboreum* are rich crimson with black, chocolate and red markings in the throat of the flower. The object aimed at was to get these colors and pencilings into varieties which would stand the British climate. This could only be effected by raising thousands of seedlings and making selections of such as promised the desired qualities, namely, various tints of

the carmine and rose of the *arboreum* to blend with, or supplant the lilac of the *Catawbiense*, but combined with the habit and growth of the latter. It was found that if the *arboreum* was pollinized with the *Catawbiense* the seedlings were not hardy, but when the *Catawbiense* was pollinized by the *arboreum* the habit of the female parent was maintained, but except in rare cases the color of the flower was not materially changed.

DIFFICULTIES IN THE WAY OF SUCCESSFUL RHODODENDRON HYBRIDIZING

Crossing and raising seedling rhododendrons is a work of years and is full of interest. The first difficulty, in the case of using the early and late varieties as parents, is to get them in bloom at the same time; the *arboreum* being the native of a warm climate requires the protection of a hot house, and therefore flowers much before the hardy varieties; to force the hardy ones does not fully answer the purpose of the hybridizer, because forcing weakens the growth to some extent, and plants thus treated do not seed so vigorously. To retard the *arboreum* seems the most practical, but this is also attended with some trouble; it can be effected, however, by keep-

ing the plants in the shade and in the coolest part of the house, and then removing them into the greater heat and sunlight when the flowers are required. Another difficulty is that the seeds are so small as to require great care in the handling, and will only germinate when subjected to a certain degree of moisture and moderately cool temperature; sown close to the surface and shaded from the hot sun, very finely pulverized peat soil being used on which to sow the seed.

SOME INTERESTING EXPERIMENTS

Some experiments were also made in crossing the ponticum, a much more free growing species from Asia, which is hardy in England and used there very extensively for under-cover in pheasant preserves, but not much progress was made with the ponticums, the flowers being loose and small, and the hybrids not perfectly hardy. Several varieties were produced, namely, one called Victoria, a deep claret color, p. roseum, deep rose, and some others. Another parent was *R. maximum*, the species indigenous to New England, and by mixing this with *Catawbiense* some fine, light-colored sorts were produced such as *album elegans*, *album grandiflorum* and others, and these being again recrossed, some fine light-colored sorts have resulted. *R. Javanicum*, a species with glossy foliage and golden yellow flowers was used to try to infuse their tint into the hardy varieties, but does not appear to have been successful.

Once the efforts to acquire new and improved varieties were successful it was much easier to add to their number by crossing them with each other, therefore many fine ones are annually announced, but nevertheless some of the original seedlings hold their own and have scarcely been surpassed.

When some of the choice *Catawbiense* seedlings were imported to this country the first specimens were killed the first winter; this may be accounted for by the fact that they were grafted upon ponticum stocks, which, although it survives the cold of the old world succumbs to it in the new, especially when they are not worked so low as to permit of the stock being buried in the soil.

TREATMENT REQUIRED BY THE RHODODENDRON

It is gratifying to remark that the rhododendron is growing in popularity, and new and superior hardy varieties are increasing in number, while the older ones are not to be despised. This queen of evergreen flowering shrubs accommodates herself to a variety of soils but thrives best in peat earth or any decayed vegetable matter. Potash and carbonic acid she delights in, but nitrogen, in too undiluted a state, or in too large a proportion, is very injurious. I once had a batch of seedlings I was particularly anxious to push along, so I gave the

soil a dressing of stable manure, without due consideration, and killed every one.

Do not add animal manure to the soil nor mulch the beds with stable litter; a mulching, before the bushes are large enough to cover the ground, is desirable but it should be of leaves, straw or grass, cut before it has gone to seed; such a mulch will keep the temperature of the earth equal, and will prevent a too sudden thawing of the roots in the spring.

Rhododendron should never be pruned but planted in such order as that each specimen may grow into a perfectly symmetrical shape. Neither should large branches be cut for table or house decoration, because if the natural contour of the bush is destroyed it can never be repaired.

AN EXHIBITION SUGGESTION

The shrubs can be removed at any season except when the ground is frozen hard, or when the new growth, which immediately succeeds the flowers, is very tender,

and even then they may be transplanted if carefully handled and the roots well soaked with water. This peculiarity has enabled extensive growers in the old country, such as the Messrs. Waterer, to hold annual exhibitions of their choice varieties under large canvas tents. These exhibitions are among the great horticultural sights of the British metropolis.

If I should not be too presumptuous I might venture

to suggest that the great Massachusetts Horticultural Society would do well to hold such a show annually in Boston; not one of cut flowers only, in their hall, which after all gives but a poor idea of the beauty of the various species, or of their capabilities to make a most magnificent display when under a canvas tent; for it is there, where the bright sunlight is subdued, that their delightful and delicate shades of color are brought out to the best advantage; besides which they are protected from storms of wind and rain and last very much longer in bloom than under the open sky. The exhibition might be kept open two weeks at least, and the public would have a treat of which thousands would avail themselves.

The grouping and arrangements should be in charge of a most skilful floral decorative artist. Prizes for growing plants, either single specimens or in collections, should be liberal enough to induce competition and to reimburse exhibitors for their trouble and expense in transporting their specimens to and fro, and there is little doubt that the enterprise would be a grand success.

A Tent Exhibition by J. Waterer & Sons.

Geo. Moore

Raising Hardy Rhododendrons

WHY SO MANY RHODODENDRONS ARE TENDER

There are a few, so to say, "about hardy" rhododendrons, but the only ones that are truly hardy in New England are those who descend from *Catawbiense* and *maximum*. If *Catawbiense* had not been introduced into Europe so long after *ponticum*, which had been used as a seed bearer in crossing with *arboreum* and other tender species and gave all those beautiful varieties in cultivation, the chances are that the American species would have been taken for crossing purposes and a much hardier set of varieties would now be in cultivation. The fact is that *ponticum* is an easier and quicker grower, hardy enough in Europe, more liable to cross; as in the seedlings from true *ponticum* there is always a tendency to variation in color and form of the flower, something much less accentuated in *Catawbiense* and *maximum*, and for those reasons, probably, the American species have always been neglected. Since the demand for hardy rhododendrons in our country has begun to increase, however, the hybridizers of Europe are working in that direction and I do not see why we ought not to try to get our hardy rhododendrons ourselves. Parsons' nursery in Flushing has raised in the past some good varieties which are the leaders among the hardy ones yet, and why should not the experimenting be followed up?

Catawbiense, which flowers at the same time as the other varieties, is easy to cross. Although it is a little shy in taking strange pollen, with patience and perseverance good seed pods can be obtained. With *maximum* this is more difficult, but I think that by keeping a few hybrids in cold storage for a while one would have some flowering together for hybridizing purposes. *Punctatum* could be tried as a seed bearer also.

TO RAISE RHODODENDRONS FROM SEED

There are several methods advocated for raising rhododendrons from seed. I have tried a few ways myself with more or less success. The following is the one which gave me always best results. Eight-inch square pans are filled with crocks and moss to the half height; good sandy peat is used to fill up the pot, the

top part of which must be finely sifted, to one-half inch from the top, and well pressed down. Before seeding the soil must be sprinkled and the seed scattered over it, but not thickly, after which the pans have to be covered with glass and put in saucers big enough and always filled with water. An ordinary greenhouse is all they need, but they have to be kept in the dark until germination begins when a little air is given until they are strong enough to have the glass removed. It is best to start early, as soon as the seeds are ripe, so as to have strong little plants before the heat in the spring when they have to be pricked off and planted in the same compost as the seeds, the pans being kept always in a saucer filled with water. During the summer they have to be kept in a cool, half-shady, damp place, a cold frame being the best; thrips and damping off when too warm must be guarded against.

CARE OF THE YOUNG PLANTS

During the first winter the young plants can be kept in a good cold frame and will be big enough to be planted out in the following spring in frames or beds where they must be kept well-watered and shaded. The first winter out of doors it is best to cover them with turf as they are not yet strong enough to test their hardiness. Having been planted only four inches apart it will be necessary to transplant them again the next spring giving more room and they soon will be strong enough to show a few buds—we have buds on three-year-old plants. A little covering with leaves every winter is necessary to keep a too heavy frost out of the ground, and if they are planted in the open, shade has to be given.

As said before, we are in need of hardy American-raised rhododendrons and everybody having the time and the necessary, ought to help make a step ahead in the improvement of those beautiful ornaments of our gardens.

Am. Dutham

The Question of Hardiness

Rhododendrons have gone through a series of severe winters. These have tried the mettle of the best and the oldest of them. The size and the age of many of our largest plants ought to be a guarantee of their hardiness. They could not have lived and thrived, as many of them have done for thirty years, and not be considered ironclad. Some of these have been injured, and never more than during the past winter.

From our experience, we still believe a northern exposure best. By this we do not mean they should be entirely shut out from sunlight, although we have some remarkable plants, that are almost entirely so. Their foliage is extremely handsome, and in this respect alone, rhododendrons are remarkably effective. Still most people want them to bloom, and this they do not do nearly so well as in sunny places. Under such conditions,

however, though not so prolific in bloom, the flowers are larger, and last longer.

On the matter of exposure, we would conclude that it is most essential that the plants should have some sort of a screen from the midday sun. To illustrate what is meant: We had to move two plants in the way of improvements, and protected them specially, with a screen of spruce boughs. If this had not been done, they certainly would have been sunburned. It was done, in this case because root action was disturbed late in the season. Still it is a case in point. It is the winter's sun that does most injury, and especially during the month of March. So-called sheltered places, where sun heat has a chance to gather, suffer most. The damage comes from the alternate freezing and thawing of the buds and foliage. In more exposed places, and in full sunshine

they do not suffer so much; and near the lake—facing northwest with no protection—least of all.

All in all there are few places in Massachusetts where rhododendrons and many other exotic trees do so well. Generally under average conditions growers have a trying time. Rhododendrons give the ordinary gardener more concern than any other out-door plants. I am frequently asked to recommend an ironclad list. Not knowing the conditions it is often a difficult task. Growers in the United States are almost altogether dependent upon importations. Nothing that I know of has been done to develop a type suited to our climate. In this our hope lies in breeding up from the Catawbiense type. We may have to be content with less range in color, though with perseverance this may not be denied us. The oldest, handsomest and in every way the most satisfactory plants are the Catawbiense hybrids, which were the first ones planted.

Some years ago we suggested to the late H. H. Hunnewell that some of the hardiest of our plants should be

crossed with some of the tenderer ones of rich coloring. We were told that we should be in Mt. Auburn Cemetery before they bloomed. To be buried there is an honor we hardly expect, but we do hope to see some of our seedlings, now nearly a foot high, bloom. Whether we succeed or fail we intend to keep on.

It is difficult to arrange color satisfactory. It is a defect we see everywhere. Good whites are scarce. The only way to get color effects is to plant them liberally. I should prefer to keep the colors in separate beds, or, if I wanted a large bed, I should separate the color by using white. Other effects can be made by planting the early and late varieties separately. A bed of Charles Dickens would be past before J. W. Sargent came in. Similarly, Album Grandiflorum before Delicatessimum.

J. D. Hatfield

Roses Under Glass

EARLY PLANTED HOUSES PRODUCE BEST CROPS

Rose growers year after year are realizing the fact that houses which are planted in May, or early in June, produce the heaviest crops, and that the cut is superior in quality to those planted later. This result is doubtless due to the fact that roses planted thus early have the advantage of the long, sunny days of summer in which to grow, and usually by the end of September have developed into good-sized, thrifty plants, from which it is not unreasonable to expect a good crop. The expense attending the replanting of rose benches is a very considerable item and one from which many growers seek to escape by carrying over stock another year. Others, and their numbers increase each year, have hit upon a plan for disposing of their year-old stock to advantage. By means of liberal advertising in the newspapers, magazines, etc., these plants which but a few years ago were unceremoniously dumped on the rubbish heap, are now sold for garden purposes all over the country.

With our planting plans already perfected, young stock, soil, etc., in proper condition, the first object should be to find a market for the old stock. If this can be disposed of at a figure that will leave a fair margin of profit after paying for the labor of lifting, packing and shipping, it will be like money found, as they have got to go anyhow.

PUTTING BENCHES IN PROPER CONDITION

As soon as the old plants and soil are removed, the benches should be put into a good state of repair so that there will be no danger of a break down during the season. Weeds, old soil and rubbish should be removed from under the benches, and the boards of the benches given a good washing by playing the hose upon every crack and crevice so that no dirt will remain. The insides of the benches should then receive a good coating of hot lime wash, which destroys insects and their eggs, and helps to preserve the wood. To prevent the soil from running through the spaces between the boards wheat or rye straw may be spread on the benches. The almost perfect drainage insured by tile or hollow brick bottoms is so well known that to use the words of a well known grower—"We are only waiting for the old

benches to collapse, to relegate board bottoms to the realms of 'innocuous desuetude.'"

As soon as the benches are ready, they should be filled as quickly as possible, so that the soil may not dry out too much previous to planting. If bone meal is to be used as a fertilizer, care should be taken to spread it on the soil as evenly as possible. It may be either stirred into the soil, or left on the surface. The act of planting will place as much of the meal near the roots as is good for them at present; the subsequent watering and stirring of the soil will gradually convey the rest to within reach of the roots. If the soil in the benches is five inches deep the quantity required is about twelve pounds to every 100 square feet of surface.

PLANTING THE YOUNG STOCK

In planting Bride, Golden Gate and similar varieties, each plant should be allowed a space at least one square foot to grow in, never less. Beauties require at least one-third more, if high grade blooms are desired. Some growers prefer diagonal planting at right angles, claiming that it is much easier to give the plants the full benefit of the syringe.

Previous to planting, the young stock should be carefully examined to see that none are dry. Any plants put into the bench in this condition take a much longer time to start than do the others. Also the balls should be disturbed as little as possible, simply rubbing off the sharp edges around the surface, and not even removing the drainage. Each plant should be placed just deep enough to cover the ball, and the soil pressed firmly around it, leaving a depression around the neck of the plant. This should be slowly filled with water as soon as possible after planting, and on every bright day for about two weeks it should be repeated twice a day, as, at this stage, young stock revels in copious supplies of water.

During bright weather syringing may be practiced quite frequently and will serve not only to keep red-spider in check, but to cool off the house.

Colored Plate With This Issue. Rhododendron Pink Pearl.

A shipper
tripped up

An action to recover the cost of a consign-
ment of lily of the valley pips, by a
Holland firm against an English florist,
was recently decided at Bath, England, in
favor of the defendant, on the grounds that the Dutch

variety had been delivered instead of the Berlin pips which had been ordered, a fact which appears to have been adequately proven by witnesses. This seems good law but there are plenty of parties who are willing to take chances and substitutions, some easy and others difficult of detection, are probably of daily occurrence in nursery, plant and seed trade. A few applications of the legal penalty for the deception, on the order of the incident above recorded, would have a healthy restraining effect.

The
rhododendron

The rhododendron has been selected as the special subject for our attention in this issue of HORTICULTURE. No argument is needed to substantiate the right of this most useful and beautiful of flowering shrubs to the distinction we are according it. The rhododendron has been deservedly designated "the most glorious of our garden ornaments." Of late years much work has been done in the field of improvement. More attention has been given to the testing of varieties for hardiness in the climate of our northern States and the English raisers upon whom we have thus far depended for the greater part of our supply are earnestly striving to furnish stock that may be relied upon. As urged by one of our correspondents in this issue, there is a good field for American hybridizers in the crossing of the rhododendron with a view to producing varieties that will be absolutely iron-clad in our gardens and at the same time possess the rich coloring and size and profusion of bloom which thus far are rarely found excepting in sorts that are not always to be depended upon.

What the
month of
June offers

Five important events scheduled for the month of June are the meetings and exhibitions of the American Association of Nurserymen at Detroit, June 12 to 14, Horticultural Society of New York at New York City, June 12 and 13, and American Peony Society at Ithaca, N. Y., June 18 and 19; Twenty-fifth Convention of the American Seed Trade Association at New York City, June 25 to 27, and the Annual Rhododendron, Peony, and Rose Shows of the Massachusetts Horticultural Society at Boston on June 8 and 9, 15 and 16, 22 and 23. There is no more delightful season for traveling than the month of June and doubtless the attendance at all these important affairs will be large, as indeed it should be. No better evidence of progressive prosperity in any branch of the great horticultural industry can be advanced than a full and enthusiastic attendance upon the meetings of the organizations devoted to its interests. Progressive no man can well be who denies himself these opportunities to mingle with his fellow craftsmen, to see and hear what others are doing and to divest himself of the narrow-minded provincialism and palpable self-conceit that so often characterizes those who never travel. Beyond a question he who attends any one or all of the events above noted in the right spirit, will take back with him a full equivalent for all it has cost.

AFTER ADJOURNMENT.

We learn from a press report that a shipment of more than 1000 barrels of fancy Australian eating apples has reached New York, the voyage occupying sixty days. Isn't it about time for our apple growers to sit up and begin to take notice?

The Pittsburg Leader for May 19th puts the credulity of its readers to a severe test in a very romantic description of "The Resurrection Flower." How is this for word painting?

The flower blooms but for a short time, and then its aspect changes. Before an hour has passed, we can see its life fading away. The pulsing light at its heart grows fainter and fainter; slowly the petals raise themselves, to drop wearily side by side upon its bosom, and finally, its beauty vanished, its strength exhausted, it hangs heavy and brown upon its stem, waiting for the touch that alone can waken it again.

Rather reminds one of the Mermets some growers used to send to market day before Christmas in the olden time!

We make bold to say that no publication on this continent, of whatever character, is doing more earnest, public-spirited, far-reaching work for the people of today and the people of the future than is Forestry and Irrigation. This magazine is issued monthly by the American Forestry Association, Washington, D. C., at \$2.00 a year, including annual membership in the Association. After reading its convincing appeals on behalf of the trees and our fast-disappearing forests and noting the many striking illustrations of forest scenery no one will regret the trifling investment for one year's dues or fail of heartiest sympathy with the Association and its well-directed work. We should like to see every reader of HORTICULTURE a member of the American Forestry Association. Apart from our ordinary interests as citizens there is much that we have in common. Horticulture and forestry touch all along the line.

SHRUB CHAT.

Climbing roses flower more profusely if the stems are trained nearly horizontally. A V-shaped incision in the bark with a sharp knife just below each bud when dormant will also tend to increase the quantity of bloom.

A group of Rhododendron Pink Pearl, the subject of the beautiful colored plate accompanying this issue, received the high award of a silver-gilt Flora Medal at the exhibition of the Royal Horticultural Society in London on May 14.

Viburnum Carlesii, which flowered for the first time at Kew last year, is spoken of by a writer in the Gardeners' Chronicle as one of the most valuable of recently introduced shrubs. It is a native of Corea and quite distinct in general appearance from any other cultivated species; the flowers are white on the inner surface and pink on the outer, bearing a strong resemblance to some species of Rondeletia and having a delicious perfume.

You will find something worth reading on every page of HORTICULTURE.

UP-TO-DATE METHODS OF GROWING THE DAHLIA.

As a first essential for growing the dahlia properly the ground should be thoroughly cultivated to the depth of eight to ten inches. If planted in hills the tubers should be given a depth of fully six inches; they should be laid horizontally in the soil in place of vertically so that the tuber at the sprout should be not less than six inches below the surface. The new tubers all form and make their growth at the base of the crown of the old tuber. If planted as advised there will always be moisture enough in the soil to keep the plant continually growing. After the tubers are placed it is well to cover the sprout an inch or so with soil before using any fertilizer or dressing. It is not wise to use too much stimulant at first. After the plants get to the stage of throwing out buds it is well then to make another application, either in liquid or raw state; this should be applied around the plant on top of the soil from six inches to two feet. One great point to be considered before the plant gets to its flowering state is the cultivation of the soil. In order to obtain the best results from the dahlia, the soil should be kept thoroughly cultivated either with a hand hoe or with a horse cultivator. After your plants begin to show signs of flowering it is not well to cultivate them, as this is very apt to injure the plant through the cutting off of many of the new tubers thus weakening the growth, and in many cases causing the plant to wilt in the hot sun, something from which it will take a long time to recover. The dahlia will do well on any kind of soil if properly treated. If grown on heavy soil it is well to use some ground bone meal and nothing but staple fertilizers should be used. On light sandy soil it is well to use some stable dressing, also ground bone meal can be used with good effect, as this is the soil that just suits the dahlia, but good cultivation is the main point in getting first-class results for there is no plant that is more responsive to cultivation and good treatment than the dahlia and if properly cultivated it will produce more flowers than any other plant in the garden.

J. K. ALEXANDER.

East Bridgewater, Mass.

JUNE EXHIBITIONS AT BOSTON.

The annual rhododendron exhibition of the Massachusetts Horticultural Society will be held Saturday and Sunday, June 8 and 9, at Horticultural Hall, Boston.

The annual rose and peony show will take place the following Friday and Saturday, June 14 and 15, followed on Saturday and Sunday, June 22 and 23, by the rose and strawberry exhibition.

As the season is unusually backward it is expected that these exhibitions will overlap each other somewhat, and classes not competed for on the dates assigned will be continued over to the following week, so that a series of fine weekly exhibitions is assured for the next three weeks.

The admission is free to all.

WM. P. RICH, Secretary.

MUSINGS OF MCGORUM.

Decoration Day goes on record as the best in history. The scarcity of outside flowers brought about by the late season accounted in a great measure for the volume of business done, and it brought to the surface the fact that people are willing to pay for good flowers at any time of the year when they want them. In one of your contemporaries I noticed that the Boston correspondent mentioned that carnations were being preserved, or, in other words, "salted." Tuesday morning I noticed a certain shipment of carnations that had just reached a wholesaler; on being opened some Lawsons on top were found in fairly good shape, but the white ones underneath were in a dilapidated, weary condition. The wholesaler passed them aside and opened another lot from a different party, which were in good shape. The first mentioned lot probably went to the fakir and, of course, there would be a protest from the consignor as to why he didn't get the top price when carnations were selling at a high figure. Such men practicing this game ought to be keel-hauled, branded and drummed out of the business. It stops people from buying very often when they otherwise would.

We have all been busy, and the rose men will now be still busy as the planting season is in full swing. Verily a greenhouse man's life is strenuous, but of course there are little pleasures such as club outings, club banquets and meetings that tend to help him smooth over the rough places in this stirring world. There was considerable excitement at the last club meeting. On entering the hall I noticed a group of men hastily putting on their overcoats, ready to take to the tail timber. I noted that the hall looked somewhat different, the roof being hung with calico, all plaited like Scotch kilts, and the wall draped in white. I thought some of the clans had dyed their tartans, or some of the Back Bay ladies had hired the hall as a drying room for the washings to keep them clear of the B. & A. R. R. smoke. But Pres. Westwood, with his usual tact, came forward and explained that the trustees were trying experiments to get better acoustic results. Little, if any, difference could be noticed, however. When at the boiler hearing, some time ago, we heard a boiler expert talking about the pulsation of the engine wearing out the boiler. There being many second-hand boilers sold cheap, why couldn't the trustees buy a quantity, cut them open and make an arch over the hall? The speaker's voice would reverberate along the centre and drop echoes at the end so that the deaf could hear.

I see in your N. Y. contemporary of recent date that our friend W. N. Craig took the editor of that paper to task in words something like this:

"Come hither Aleck lad an' answer for't: your blam'd for leelin'."

Craig used bare knuckles and had the worthy editor gasping for breath in the first round.

The saying that "it's an ill wind that blows nobody good," seems to hold good just now, for the cool weather has helped to keep roses in better condition than they would be had we the usual weather at this time of the year.

R. T. MCGORUM.

NEWS OF THE CLUBS AND SOCIETIES

AMERICAN ROSE SOCIETY.

Certificates and Prizes—\$200.00 and \$100.00 for Outdoor Roses.

Pursuant to notice, the Executive Committee of the American Rose Society held a meeting at the Hotel Martinique, 33rd St. & Broadway, New York city, on Tuesday afternoon and evening, May 28th, at which meeting there was taken up the matters pertaining to the Washington Exhibition, Mr. Bisset, president of the Washington Florists' Club being present.

The minutes of the business meetings were read and recommendations for action passed at that meeting referred to the executive committee were taken up, viz.:

The recommendation that a certificate of merit be awarded to novelties which did not score the requisite number of points to receive either gold or silver medals of the Society as now provided. At the Washington meeting, at the second session this subject was discussed with interest by Messrs. Craig, Elliott, Barry, Farenwald, O'Mara and others. In accordance with the authority then imposed upon the Executive Committee, the following resolutions were offered and carried:

Resolved that hereafter any exhibit competing for the Society's medals or certificates shall consist of twelve blooms.

Resolved that a certificate of merit be awarded to any novelty covering 80 or more points in accordance with the recommendation made at the annual meeting in Washington in March, 1907, and that this certificate be, and is hereby added to the list of medals now offered by the American Rose Society for novelties but the certificate is not to be delivered until the variety is named.

Resolved that a certificate of merit be awarded to the varieties, Queen Beatrice scoring 83 points, Rhea Reid scoring 80 points and the variety exhibited by Messrs. Myers & Samtman, scoring 81 points.

Resolved that the following varieties of climbing roses exhibited by M. H. Walsh, Woods Hole, Mass., Paradise, La Fiamma, Delight and Juanita be awarded a certificate of merit as recommended by the judges of the Washington Exhibition, March, 1907. These resolutions were put to vote and carried unanimously.

Mr. E. G. Hill of Richmond, Ind., advised that he would attend the Nurserymen's Convention at Detroit and if opportunity offered, bring before that body the advisability of the support by nurserymen of the Rose Society, especially in the interest of hardy outdoor roses. On this point Philip Breitmeyer, vice-president elect of the Society, advocated that some recognition should be offered to induce exhibitions of outdoor roses, saying, "I offered a prize when at the meeting in Washington for an exhibition of outdoor roses in bloom, say 100 or 150 plants in a group. This should be limited to outdoor roses but not limited to varieties. I have suggested this idea to several men who are largely interested in this class of stock and in order to bring this to a

head, I will offer \$200 for a first prize and Mr. Boddington will offer \$100 as a second prize to be awarded for such an exhibition in any form that is desired.

This liberal offer provoked very much interest, calling forth the belief that so large a prize would stimulate efforts which had never been made before in this direction. Mr. Farenwald said that he had never yet seen a good show of Hybrid roses in pots at any of our exhibitions, but I admire the pluck of Mr. Breitmeyer in leading off as he has done in this direction and Mr. Breitmeyer deserves thanks for his liberal offer. The Committee accepted the prizes of Messrs. Breitmeyer and Boddington with thanks.

The matter of increasing the membership of the Rose Society was brought forward and a further suggestion of Mr. Breitmeyer was favorably received, he having said, in speaking of the coming show at Chicago, that he believed our field in the west to be large and that the growers as a rule were in sympathy for mutual benefit.

Life memberships are greatly to be desired so that thereby a permanent fund may be acquired. A suggestion was made, following the recommendation of President Simpson in his annual address, that a list of names of such men as may be eligible be distributed for life membership. Mr. Breitmeyer said he would be glad to be one of the executive committee to secure life members or to increase the membership to where it is desirable to have it.

A resolution was passed directing the Secretary to prepare a Bulletin of the proceedings of the last annual meeting and exhibition and secure specimens of suitable certificates of merit and certificates of life membership.

BENJAMIN HAMMOND, Sec.
Fishkill-on-Hudson, N. Y.

FLORISTS' CLUB OF WASHINGTON.

The June meeting of the Florists' Club was held at Gude's Hall on June 4th. One new member, D. N. Shoemaker, a recent addition to the carnation industry, was admitted to membership in the club.

Pres. Bisset exhibited several of his new seedling roses; they were enthusiastically received by the members present. One, a pink one, of exquisite shade, named Rosalie, attracted especial attention. Another, somewhat darker, more like La France, was especially handsome. It will be remembered that Mr. Bisset was the originator of the Queen Beatrice rose, of which the above mentioned are, I believe, descendants.

A motion, made by Geo. H. Cooke, to have a chrysanthemum show held here next November, under auspices of the Florists' Club, was carried. The date has not yet been decided upon.

A handsome silver cup, won by the bowling team in their late contest, was exhibited by W. H. Ernest. After some minor discussions the meeting adjourned to meet again the first Tuesday in July.

AMERICAN PEONY SOCIETY.

Fourth Annual Meeting June 18 and 19 at Ithaca, N. Y.

The fourth annual meeting of the American Peony Society is to be held in the new buildings of the New York State College of Agriculture at Cornell University. There are many reasons why this meeting promises to be an interesting and important one. There will be an exhibition of blooms staged in the auditorium of the College, which will represent the best productions of the various growers in the country. Besides this there is an extensive collection of varieties comprising nineteen hundred and thirty-three lots of one, two or three plants each, growing on the Experiment Station grounds, which have been donated by peony men all over Europe and America. These blooms will be available for study to all those interested. A checklist, including all names ever published with descriptions, and giving references to sources and indicating all pictures, will be available for use at this meeting. Questions of nomenclature bearing upon the authenticity of varieties and the grouping of synonyms, will be brought up for discussion.

The meeting, coming as it does in Commencement week, will give an opportunity to visitors to inspect all buildings of the University, and pleasure parties may be made up to visit some of the many interesting and beautiful waterfalls, gorges and lakes, for which this region is famed.

FLORISTS' CLUB OF PHILADELPHIA.

A well attended meeting of this club was held on the 4th inst. Antoine Wintzer, on the "Deterioration of Forcing Roses," was the principal attraction. He dwelt especially on the rage for cheapness and blamed the shoddy spirit of the age for much of the falling away. Some of the members seemed to think that Mr. Wintzer took too pessimistic a view of things declaring that there was always a market for the best and that if the best was always properly advertised and emphasized there would be no trouble in getting good prices. Six new members were elected to membership. Chas. D. Ball, chairman of the executive committee on convention, reported satisfactory progress, and predicted ample resources for taking care of what is felt now will be the banner crowd in the history of the trade. Jno. Westcott has recovered his health and is helping the rest of the members to plan arrangements with all his old-time vim and spirit. A special meeting of the Executive Committee will be held on the 20th inst to perfect details on convention program.

Joseph Heacock has been chosen as head of the hotel committee for S. A. F. convention at Philadelphia. Those who wish to be forehanded in this matter should address him at Wyncote, Penn.

10,000 AMERICAN ARBORVITAE (*Thuja Occidentalis*)

Each tree grows wide apart and splendidly developed on all sides. So bushy that for hedges or screens they will go almost twice as far apart as ordinary Arborvitae will. They have been frequently transplanted and are supplied with an abundance of fine fibrous roots. Can be dug and shipped with ball if desired.

Cold Storage Lilies

All live and up-to-date florists grow
COLD STORAGE LILIES

THE forcing of cold storage lilies is no longer an experiment. If you have not already grown some of these we can refer you to **hundreds of florists** who make a success of this method and have lilies "all the year round"—The same as Lily of the Valley.

Our lilies are bought for and placed in cold storage for the **express purpose of delivering bulbs in the summer time.**

Lilium longiflorum and l. giganteum take about two months to bloom from

ARTHUR T. BODDINGTON, 342 West 14th St., NEW YORK CITY

Seed Trade.

Unfavorable reports about the pea crop are arriving, and some specific instances of serious damage are given. A letter from one of the leading canners who is located in Michigan, says he has lost 200 acres of peas through the rotting of the seed, and that much of his other acreage is more or less "spotted." Other reports from Michigan and from other sections, though less specific than that cited, all tend to show that peas are not in fine condition, and in fact have started with considerable of a handicap. As the situation develops, the facts will be given in HORTICULTURE.

Weather conditions are much improved since the advent of June, but are still quite unsatisfactory. Much re-planting of corn and beans is reported and, in the seed corn districts of Connecticut, this is being done on an extended scale as seed of the first plantings has quite generally rotted in the ground.

Vine seeds are now being planted, but under more or less unfavorable conditions. Jerome B. Rice Seed Co., report the situation as very unsatisfactory in Washington County, New York.

It is significant that not a single seed crop is considered to be in really fine condition. This is a danger signal which the thoughtful seedsmen will not ignore.

There is still a possibility of Rennie & Thompson of Providence, adjusting matters, and continuing in business, although there may be some change in the personnel of the firm. Nothing has been decided, however, though a definite decision will have to be reached soon.

A liberal fund has been raised for the entertainment of the seedsmen at their forthcoming convention, but how to spend it to the best advantage is troubling the Committee on Entertainment. Part of the Committee advocate spending it on one grand banquet, while others think a good dinner, with not too much spent for liquids would be more satisfactory, as it would leave a considerable balance

200,000 Calla Lily Bulbs--Æthiopica

	100	1000
Calla Æthiopica, 10 inches circumference	\$10.00	\$90.00
" " " 9 " " " "	9.00	80.00
" " " 8 " " " "	8.00	70.00
" " " 7 " " " "	7.00	60.00
" " " 6 " " " "	5.50	45.00
" " " 5 " " " "	4.50	35.00
" " " 4 " " " "	3.50	25.00
" " " 3 " " " "	2.25	15.00

The above Bulbs are all warranted to be free from disease, and safe arrival is guaranteed. My first car leaves for the East promptly on July 15. If cash is sent with the order I will prepay the freight, which is 15 per cent value of the bulbs.

A. MITTING, 17-23 Kennan Street, SANTA CRUZ, CAL.

ZIRNGIEBEL'S GIANT PANSIES

Fresh Crop

Now Ready

Famed for a quarter of a century and when you buy them you get the **best in existence.** I am continuing the pansy business on exactly the same standard as carried on by my father, the late DENYS ZIRNGIEBEL. **None genuine unless sold by me.**

AUGUSTUS ZIRNGIEBEL, Needham, Mass.

GIANT MARKET. "The Variety for the Million." Trade packet, 2000 seeds, \$1.00.

GIANT FANCY. The NE PLUS ULTRA in Pansies. Trade packet, 1000 seeds, \$1.00.

to be expended in other ways. In view of the fact that not over half of those present will drink wines or liquors of any kind, much of the money spent for this part of the dinner will be wasted, and while not desiring to "butt in" or offer advice, the opinion is ventured that a moderate-priced dinner will be much more satisfactory to the great majority of those who will attend the convention.

W. Atlee Burpee and family, together with Mr. Brown, treasurer of the Burpee Company, Philadelphia, sailed for Europe on the 1st inst.

The business of the Lamar Seed Co., Lamar, Colo., has been purchased by F. H. Kelsey.

C. C. Morse & Co., have leased the six story and basement, class B building, at 48 to 56 Jackson street, running through to 13 to 22 Clark street, San Francisco, Calif. Their offices and all of their bulk department and general packing headquarters will be moved to this building. They will continue to operate the retail store of the Cox Seed Company at 125 to 127 Market street and are having same fitted up in a very attractive manner. A sign now appears on the front of

the building "C. C. Morse & Co. successors to Cox Seed Company." They will carry on all of the departments formerly operated by the Cox Seed Company and E. J. Bowen, but their growing department will be operated as an entirely distinct business, with T. M. Landrum and Lester L. Morse actively in charge.

Miss Katherine Boyden has been appointed to the position of private secretary to Mr. Richter, general manager of the Michell store, Philadelphia.

IRRIGATED LAND PRODUCTS EXPOSITION.

Accompanying the 15th session of the National Irrigation Congress at Sacramento, Cal., this year will be an interstate exposition of irrigated land products and forestry products. This will be open from September 2d, when the Congress commences until the conclusion of the State Agricultural Fair, which follows immediately upon the closing of the Congress. The considerable interest that is being taken in this exposition by prominent people is indicated by the number of trophies and prizes offered for competition. No less than fifteen handsome gold and silver loving cups have been offered for inter-state competition, and to these there will be added a long and valuable list of medals, cash prizes and special awards. California will not compete for these general prizes, so that all exhibits will be on an equal footing and not be handicapped by material right at home which is always at an advantage.

PUBLICATIONS RECEIVED.

Annual Report of the Department of Agriculture for the fiscal year ending June 3, 1906. This contains the report of the Secretary of Agriculture and of the chiefs of the various bureaus, including the weather, animal industry, plant industry, forest service, chemistry, soils, entomology, biological survey, publication, statistics, library, experiment stations, public roads and other divisions of the department.

Annual Report of the Maryland State Horticultural Society, Vol. IX, 1906. Gives in full the proceedings at the summer meeting at Berlin, Md., August 8 and 9, and the 9th annual meeting, at Baltimore, Md., Dec. 5 and 6, 1906. All the excellent papers on horticultural topics presented at both of these meetings are published in full together with the speeches at the annual banquet, the whole making a volume of 300 pages.

Orchids Orchids

A man can buy now, pretty well all the time, all kinds of freshly imported Orchids, more or less good, but not all the time can he buy **fine plants**. We are in a position this spring to supply such, a few of which we mention below, and many more are to come.

Cattleya Percivaliana. These are the finest plants ever arrived in this country; every one is perfect; if ordered now and potted you will have a nice crop of flowers in November and December.

Cattleya Laleiata. These are in extra fine shape, plump and well leafed, and will pay for themselves the first season. Any of the above by the dozen or 100 or by the case.

We have also the following fresh arrivals:

Laelias, Crispa, Dayana and 'Traestans.

Oncidiums, varicosum Rogersii, Crispum, Marshallianum and luridum.

Miltonias, Clowesii, Cuneata, Candida and many others.

Write for prices.

PITTSBURG DOINGS.

The Centennial anniversary of the birth of Agassiz, the naturalist, was celebrated by the High school students in Columbus Grove, Schenley Park, on May 28th, as a postponed Arbor Day. Eighty-three trees were planted, fifty in honor of famous naturalists. Superintendent of Parks G. W. Burke directed the planting.

Retail florists had a busy time the few days preceding Memorial Day, there being an unprecedented demand for bedding plants and cut flowers. The scarcity of out-door flowers was considered to be the reason for the great demand for cut flowers, the only outdoor flowers in evidence in any quantity being Viburnum opulus which however drooped very quickly in the bright sunshine. Carnations of all colors were plentifully distributed throughout the cemeteries, Enchantress and Lawson being the favorites. Roses were not very largely used, Lilium longiflorum, lily of the valley and tulips were plentiful. A few sweet peas and fewer cattleyas were noticed. The most important exercises of the day were held in the beautiful Allegheny cemetery where W. Falconer has done good work during the few years he has had charge. An important feature of the exercises was the distribution of flowers of a high grade on the graves of the many soldiers buried in this charming cemetery which, although situated in the midst of a hustling city, is rapidly assuming a natural and rural character. Besides the usual bedding plants which were present in abundance, large plants of hydrangeas, Astilbe Japonica and spireas were noticed. Amongst the bedding plants the predominant color was scarlet, S. A. Nutt geranium

being the favorite. The run on bedding plants and cut flowers continued until late in the day. In St. Mary's and Homewood cemeteries the same condition prevailed.

J. H.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

The next regular meeting of the club will be held at Horticultural Hall on Tuesday evening, June 18, at 8 o'clock. The speaker of the evening will be Charles H. Totty, the recently elected president of the New York Florists' Club; his subject will be "The Chrysanthemum: Its Past, Present, and Future." There are other attractions being planned for this meeting which will undoubtedly be more largely attended than any in the club's history. W. N. CRAIG, Secretary.

CLUB AND SOCIETY NOTES.

The Outing Committee of the New York Florists' Club has completed its work on the programme, and \$265 has been subscribed by advertisers, and nearly \$300 for prizes. The Committee hopes to distribute copies of the programme at the meeting of the club on Monday, June 10.

The Ogden Floral Society has been organized at Ogden, Utah, with W. T. Stillwell, president, and J. F. Hendershot, secretary and treasurer. Its objects are to develop public taste in the adornment of public and private grounds and to discourage ruinous competition in prices.

A fire started in the establishment of Hike & Jones, Cortland, N. Y., on May 21, but was arrested quickly.

WASHINGTON NOTES.

Joseph R. Freeman has a cross between American Beauty rose and Baby Rambler which he prizes highly and which he thinks will be heard from in the future. A number of other new rose seedlings are under trial at this place. With Cook, Freeman, and Bisset all at work on the Queen of Flowers Baltimore and Washington are at present quite a center of interest in that new race of American roses of which Richmond is so encouraging a forerunner.

Peter Bisset has a new shell-pink Hybrid Tea rose of delightful fragrance, good form, good stem and foliage. Also a yellow sport from Abies alba and a golden form of the tulip poplar. A fine new range of conservatories is being erected; Moninger of Chicago has the contract.

Otto Bauer, a brother of Fred C. Bauer of Baltimore, is now associated with and acts as manager of the retail store of the Washington Florists' Co. The greenhouses of J. Louis Loose at Alexandria, Va., and others are a part of this concern.

Edward A. Schmid the 13th street seedsman is happy over the completion of his new store front and building obstructions next door which have hurt business somewhat the past six months.

G. C. W.

DURING RECESS.

W. H. Ernest, George Cooke, Samuel Simmonds, George Schaffer, and other prominent Washington business men who take an interest in the ten-pin pastime are proud of their improved standing and prospects in connection with the Baltimore and Philadelphia series and the coming convention.

NEWS NOTES.

George Holst, Jr., of Flushing, N. Y., has opened a retail store at 102 Main street.

The greenhouse of Alvin Bates, Rockland, Mass., was entered on May 28 and a quantity of carnations and other flowers stolen.

A. W. Turner and C. A. Keller have purchased the Hartman greenhouses, Van Buren, O., and J. J. Waaland of Findlay purchased the stock of plants.

City Forester Gale has taken up active operations against the beetles and moths that are preparing to devastate the shade trees of Springfield, Mass. Arrangements have been made for the spraying of elm trees on private grounds at the owners' expense.

Mrs. E. M. Bartow, 317 Market St., Chester, Pa., was robbed of about \$30 on May 24. A man went into the store and asked to have ten cents changed. In a few moments he returned with a companion who asked to look at plants and it is supposed that while the book-keeper was showing the plants the money was taken.

OBITUARY.

T. W. Guy.

T. W. Guy, formerly of North & Guy of St. Louis, died at St. James, Mo., on May 24, aged 76.

John Spiess, Sr.

John Spiess, Sr., a well-known florist of Buffalo, N. Y., died at the home of his daughter, Mrs. Frederick Fox, 611 South Park avenue, on May 25. Mr. Spiess was born in Aschenfeld, Germany, 74 years ago. He came to this country in 1853 and made his home in Buffalo. For 15 years he conducted a successful florist business on Peach street, retiring in 1886 and turning the business over to his son, John Spiess, Jr.

He is survived by one daughter, Mrs. Frederick Fox, and two sons, John Jr. and Andrew Spiess.

A CORRECTION.

In the paper on Bedding Plants by Thos. H. Westwood, page 719 of our last week's issue, "sixty feet apart" as applied to the distance recommended between plants of canna Alphonse Bouvier should have been given as "six feet."

CUT FLOWER MARKET REPORTS

BOSTON Business didn't wait long after Memorial Day to go to smash, so far as market values are concerned. Prices have fallen from 25 to 50 per cent. on most lines. Roses are moved at 1,000 rates, which in many cases are not very far from the 100 rates of one week ago. American Beauty roses are plentiful and slow to move. Lilies are strong at maximum prices. Gardenias are being received in abundance from the South and bring carnation values with reluctance. Carnations themselves are down to summer rates. Sweet peas are abundant with a weak market. Peonies from southern points are beginning to put in an appearance.

The week ending June 1 **BUFFALO** will be remembered by many. The Memorial Day business will not exceed previous years, as the stock was not obtainable. Parties ordering previous to Memorial Day, and who depended on receiving their full orders, were sadly disappointed, as orders were all cut in two in filling, the March weather having shortened the supply to one-third of what it should have been; this was especially true of carnations, which had the heaviest demand. There was very little out-door stock, and that which was had was snapped quickly. Roses were the life saver, and they as well as lily of the valley, peas, lilies, etc., went off at a lively rate. The latter were somewhat scarce and prices were high. Peonies were not seen at all, and very little lilac was had. Everybody concedes that the coming month belongs to the lovers and the graduates. Traditions now-a-days are becoming frightfully shattered; April showers have turned to sleet, the May blossoms have had a hard task making their debut in snow storms and frigid weather. The growers are coaxing on their crops of roses in order to be able to supply the demand during this month.

We had for weeks expected to have a fine business. Memorial Day; but no one in the trade had the least idea that any such flood of orders as was poured upon us could be possible. Several causes made this pleasing result; in the first place, there was little or no outdoor stock; then again, with every year that passes this sacred holiday is gaining great momentum as far as the use of flowers is concerned. Everybody will have them—the price matters little. It was very easy to see early on Wednesday what the result would be; stocks no matter how large, simply melted away. After most carefully considering the whole trade, I believe that in the aggregate twice as much stock could easily have been sold. The final result was by far the best and largest business ever done in this city for a Memorial Day.

The predominant feature **DETROIT** of Decoration Day was a general scurrying around to supply the demand of the buying public for flowers. The tardiness of spring caused a dreadful shortness of flowers, so much so as to be harmful to the business. Heretofore we labored here under a favorable short-

ness—that is, the scant supply prevailing stiffened prices so as to reduce that dreadful practice of cutting prices to a minimum. This time, however, a great volume of business was not done because there was no supply to do it with, a condition which occurs very seldom and could not be remedied even if it had been foreseen.

The Memorial **INDIANAPOLIS** week's business broke all previous records especially in the money value of sales. The supplies of stock were good but there was a shortage in many lines compared with last year especially in peonies and other outside stock. The strongest call was for colored carnations probably due to higher prices of other stock. Beauties, teas, longiflorum lilies and other smaller flowers were in good supply. No home-grown peonies were to be had at all, the entire supply coming from Michigan. Numerous weddings and school commencements will keep the retailers busy and create a big demand for flowers the next two weeks. There is quite a scarcity of geraniums in flower, owing to cold dark weather. All kinds of greens are plentiful with exception of good fancy ferns which are nearly unobtainable.

The supply of roses is **NEW YORK** heavier than last week but quoted prices have not undergone any radical change. American Beauties are much more plentiful particularly the shorter sizes. The quality of the Teas is remarkably good and comparatively free from mildew when the bad weather is considered. Carnations are beginning to show up in quantity and the demand has fallen off. In fact, the general business is falling away gradually. There are some peonies, lilacs, and snow balls in the market but not enough to be a factor as yet though a few warm clear days will make a big difference in the receipts of out-door material. Lilies are in good shape and fairly plentiful.

The Decoration **PHILADELPHIA** Day trade in this market exceeded the most sanguine expectations. The cool weather having held back much of the outdoor stock, which usually fills in, threw a strong demand to the regular cut flower centers, with a consequent brisk market and satisfactory prices. Stock in general was scarce. Beauties were mostly all long stemmed; Bridesmaids were improved in color and found themselves in the running with Brides, Gates, Richmonds, Killarneys, and Libertys. Killarney is especially fine at present. Good carnations were bringing Christmas prices. Sweet peas, lily of the valley, daisies, callas, lilies, cattleyas, gladioli, and other staples shared in the general prosperity. The outdoor stock observable this week include hemorcallis, cornflower, iris, deutzia and snowball. The few peonies appearing to date are mostly from south of Washington and bringing high prices. Nothing really fine has been seen in peonies up to this date, but we look for a great improvement in a short time.

Decoration Day business was the best that we have had in years; this is the general report of the trade. Stock was not plentiful and some difficulty was experienced with carnations. It seemed impossible to get a sufficient number with which to fill orders. The growers who were fortunate enough to have them took advantage of the situation and in one case a retailer paid 10c. each for them, in order to fill his orders. The general figure was between \$5.00 and \$6.00 per 100. Roses were plentiful, especially white. The trade did not count on such a heavy business, consequently some were sold out early and compelled to do some skirmishing to fill orders.

Since the severe **WASHINGTON** rain storm of June 1st, it has been cold enough to necessitate constant fires. Carnations continue of unusually good quality, by reason of the cold weather, and prices are correspondingly good. There has not been such a scarcity of flowers on Decoration Day before for years. Everything sold, and at good prices. Outside flowers can not bloom except in very limited quantities, and this, of course, keeps the price of greenhouse blossoms away above normal. Peonies are conspicuous by their scarcity; what few are seen are very small. Some few roses are blooming in the more sheltered places, but not in sufficient quantities to relieve the situation much. A very beautiful and novel feature of Decoration Day was turning loose in the waters of the Potomac a boat-load of flowers, in commemoration of those who lost their lives beneath the waters.

BUSINESS CHANGES.

The business of A. Clarine, Aitken, Minn., is being closed out.

W. O. Willard of Grinnell, Ia., has sold his business to Walter Squire.

Gordon Bros. is the name of an enterprising new firm in Ilion, N. Y.

J. W. H. Sedon has hired the greenhouses of Mrs. Blake, Greenville, Mass.

A. B. Nash has leased the greenhouses of Joseph Slade at Red Deer, Alberta.

J. B. Murphy has purchased the business of the Manistee Floral Co., Manistee, Mich.

The Rosary Flower Shop, 15th below Chestnut, Philadelphia, has filed a voluntary petition in bankruptcy.

John Bauscher, Jr., Freeport, Ill., will soon move from the Fry building to the Blust building which he has recently acquired by purchase.

Miss Bada Schmidt has purchased Mrs. Stafford's interest in the Stafford greenhouses at Marquette, Mich., and will have charge of the business.

Recent losses by hail are reported from Robert Kift and the Mancill greenhouses, at West Chester, Pa.; W. A. Rieman, Vincennes, Ind.; W. B. Davis & Co., Aurora, Ill., and Kidwell Bros., Chicago.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—An experienced assistant in our greenhouses. Must be well recommended and temperate. J. Newman & Son Corp'n, Beacon St., Winchester, Mass.

WANTED—First class gardener for a commercial house. Must be a good grower of Chrysanthemums, Asparagus, all varieties of ferns, all classes of bedding stock, and a good designer of Floral work. Able to take complete charge of 25,000 ft. glass, and 10 acres of land. Address, stating wages expected, and references. E. A. Butler & Son, Niagara Falls, N. Y.

WANTED—Good active young man, experienced in rose growing under glass. Good salary. Address B, care HORTICULTURE, 11 Hamilton Place, Boston.

SITUATIONS WANTED

WANTED—Situation as Head Gardener on private place; capable of taking care of orchids, ferns, palms, roses, etc. Best of references. Address N., care of HORTICULTURE.

POSITION WANTED by energetic American as outdoor foreman in park or cemetery. Age 35, single; can work from blue print. References. Address Foreman, care HORTICULTURE.

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

FOR SALE

A BARGAIN

FOR SALE—7 1/2 miles from Boston; one acre of land, seven roomed cottage, lawn and fruit trees, 4 greenhouses; electric cars pass place. Good neighborhood; fine property for building lots. Land, which is worth price asked for whole place, is triangular, two sides on streets. Come and see. J. ASTLE 6 Perkins St., Melrose Highlands, Mass.

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 35 Erie St., Chicago.

FOR SALE—Second hand 4 in. cast iron pipe for greenhouse heating, five-foot lengths. 10 cents per foot, F. O. B. Exeter Machine Works, Exeter, N. H.

BUSINESS CHANCES

WANTED—To sell my interest in a good wholesale and retail florist business, 10,000 feet of glass, one acre of good land, within 10 miles of Boston; early market trains handy. Address L. A., care HORTICULTURE.

PRICES QUOTED IN THESE COLUMNS ARE FOR DEALERS ONLY When Writing to Advertisers Please Mention Horticulture

PERSONAL.

Visitors in Boston this week: W. C. Langbridge, of Jerome B. Rice & Co., Cambridge, N. Y.; A. C. Polman-Mooy, Haarlem, Holland; C. C. Laney, superintendent of parks of Rochester, N. Y.; G. C. Eldering, Overveen, Holland.

In ordering goods please add "I saw it in HORTICULTURE."

MOVEMENTS OF GARDENERS.

Frank Warrington, formerly gardener to I. C. Baldwin, Falls Church, Va., is now located at Mt. Kisco, N. Y.

Andrew Morrison, lately gardener for Curwen Stoddart, Jr., Rydal, Pa., has moved to Los Angeles, Cal.

Alex. Lamont is superintendent of the estate of C. H. Hutchins, recently purchased from Mrs. P. W. Moen, at Shrewsbury, Mass.

CATALOGUES RECEIVED.

Hitchcock's Nursery, Agawam, Mass.—List of small fruits, cabbage plants, etc.

"Perfect Greenhouse Construction" an album of 100 pages by the John C. Moninger Company, Chicago, has come to hand. There are 60 full page half-tone views of greenhouse ranges furnished by this enterprising company and the remainder are blue prints, diagrams, etc., of equal interest to any one concerned in or contemplating the erection of greenhouses. The covers are illustrated in colors. Send for this catalogue and we think your conception of the extent of the greenhouse industry in America will be much enlarged.

W. W. Castle, 170 Summer street, Boston, has secured the contract for a \$10,000 job, including four steel boilers, piping, etc., as the result of the successful trial of his electric circulators installed last season.

This letter from a well known and prosperous Maine florist should interest you.

MR. W. W. CASTLE,
Boston, Mass.

Biddeford, Me.

Dear Sir:—

Having had plenty of zero weather with wind all through the past winter, the Circulator has had a tyrant to cope with. I am pleased to say that it has proved convenient, economical and necessary. I cannot say too much for its efficiency, and you are at liberty to refer anyone to me who is interested in securing a positive circulation for hot-water heating with the least expenditure for fuel.

(Signed) CHAS. S. STROUT.

Watch this space next week. We shall present some more letters equally convincing.

In the meantime write for particulars of our new

Steel Plate Hot Water Boiler

built especially for greenhouse heating. Piping and fitting done according to most approved methods and satisfaction guaranteed. Perfect circulation in all kinds of weather absolutely assured by the use of our

The Modern Herbaceous Border

ITS ADVANTAGES

To most persons there is no kind of gardening that gives as much pleasure as a properly planted and thoroughly conducted herbaceous border. The old-fashioned border where only perennials were used with probably one or two kinds of lilies is a thing of the past.

Bulbs Blooming in Herbaceous Border in Early Spring.

The modern border must contain a liberal supply of all kinds of bulbous plants and all sorts of hardy herbaceous plants which will give a continuous show of blossoms from early spring until the end of October. The charm of a border like this is its changeableness. One has not to look at the same picture for more than one week or sometimes for not more than one day. There is a continual changing of flowers. Right here is where the herbaceous border has the advantage over the bedding system.

Not only is the frequent changing of the flowers of special interest, but in early spring to a keen observer the color effects of the young foliage and stems are quite conspicuous and very interesting. The herbaceous border comes nearer nature's way of doing things than the bedding system, hence the reason we enjoy it so much.

No doubt a herbaceous border is more attractive and gives more satisfaction when it has a suitable background. A background of shrubbery is always pleasing, but such a background is not always procurable. There is one precaution which one should always take and that is to see that the border is not near large trees. Otherwise there is sure to be failure and disappointment. The roots of the trees get into the border and steal the food from the plants. The strong-growing kinds soon grow weak and sickly and fail to give the show of flowers they were expected to produce. The outline of the border is not of so much importance, but the one that gives the most satisfaction is one where the lines are uneven or sinuous.

PLANTING

In making a border we are always careful to dig the ground as deep as possible, two to two and a half feet deep. We incorporate into the soil as much rotten stable manure as can safely be put into it. We like stable manure much better than commercial fertilizers as it is more lasting and gives better results. The reason the soil is made so rich at the start is that the

border after it is planted is not disturbed again for at least four or five years. The only safe way to enrich the border during this long period is to give it a liberal top dressing, late in the fall, of well-rotted stable manure. The snow, frost and rain will wash most of the top dressing into the soil before the plants begin to grow. In spring when the soil needs loosening a fork should be used in place of a spade.

Many people make a great mistake when they imagine that herbaceous plants when once planted will take care of themselves afterwards. There is no class of plants that I know of will give good results if constant attention is not paid to them. Herbaceous plants are just like other plants; their wants and needs must be carefully looked after.

In planting our borders we try to get the tallest plants near the back and are careful not to get plants of the same height to follow one another, as an uneven line when the plants are fully grown is much more pleasing. We work the smaller plants to the front where they have not to struggle with the tall-growing kinds, and as they are mostly all lovers of sunshine, in such a position they have a much better chance to get sufficient light.

Of late years we have adopted the system of setting the large plants in the back rows about four feet apart and in the spaces between we grow large colonies of bulbous plants such as tulips, narcissi and fritillarias. In the front rows between the herbaceous plants we use scillas, chionodoxas, crocuses, snowdrops and grape hyacinths. In early spring, before the herbaceous plants have much more than made their appearance above the ground, the tulips, narcissi, scillas, chionodoxas and grape hyacinths are in full bloom. I have failed to meet any person who has not been

Fritillarias.

pleased with this system of planting when it is properly done.

EARLY SPRING BLOOMING BULBS

The following is a list of the plants as they have blossomed in the border during April and May of the current year. The first to open their flowers were the

snowdrops. The kinds which give the best results in the front row of the border are the common snowdrop (*Galanthus nivalis*), the Crimson snowdrop (*Galanthus plicatus*), and the giant snowdrop (*Galanthus Elwesii*). The flowers of the last species mentioned have a patch of green at the base of the petals. These snowdrops, the harbingers of spring, are not expensive now and ought to be planted in colonies large enough to make a show. Very soon after the snowdrops the crocuses put in their appearance, the yellow kinds coming into blossom first, followed quickly by the light blues. The following kinds are the best for border work: In white, Caroline Chisholm, Mammoth White and Mont Blanc are the most pleasing; in striped crocuses, Albion, Cloth of Silver and Sir Walter Scott are good; the best yellows are Golden Yellow and Cloth of Gold, and the most satisfactory of the blues and purples are Baron Von Brunow, King of the Blues and *purpurea grandiflora*.

The early squills are charming; their blue flowers dazzle in the early spring sunlight. The Siberian squill (*Scilla Sibirica*) and its white form are the best. *Scilla bifolia* has not as large flowers as the Siberian squill and they are of a different shade of blue; although the flowers are smaller they are produced very abundantly. The *chionodoxas* that do well are *Sardensis*, *Lucilæ* and *Lucilæ* variety *gigantea*. This fine variety *gigantea* is a much stronger growing plant, has much larger flowers and a most pleasing shade of blue.

Owing to the lateness of the season very few narcissi blossomed until near the end of April this year. The established plants always come into flower first; that is the bulbs that have been in the ground for several years. Those that were planted late last fall came into blossom much later. There is no doubt if we had our beds and borders ready in August for the narcissi that they would be much better in the soil at that time. When planted late they make very few roots until spring. However, any one who wishes to lengthen out the season of blossoming should plant some bulbs each year late in October.

It is very unusual to have narcissi in bloom as late as Memorial Day and if the weather still continues cool we shall have them for a week or more in June. The following kinds were planted late in October and are in bloom today, May 31st. This list will be of interest in years to come to show the lateness of this exceptional season. In yellow trumpet varieties we have Ard Righ, Golden Spur, *Rugilobus Maximus*, and Emperor; bicolor trumpet varieties, Empress, Grandis, *Horsfieldii*, and Princes; *Incomparabilis* varieties Figaro, Queen Bess, Frank Miles, Sir Watkin and Cynosure; Leeds varieties, Leedsii and Minnie Hume. Other varieties, *Barrii* conspicuus, *Burbidgei*, and *poeticus ornatus*. These narcissi make charming border plants and should not be disturbed often.

Of tulips the single varieties and the species are the most pleasing. Double tulips are too stiff and formal for the mixed border. Parrot tulips we do not care for as border plants; their stems are too weak and they do not hold up their large gorgeous flowers in pleasing way. The following are all showy and effective and keep on increasing in the border: Belle Alliance, *Chrysolora*, Duchesse de Parma, Yellow Prince, La Reine, Pottebakker Scarlet, Prosperpine and Vermilion Brilliant.

The May flowering Cottage tulips are exceptionally valuable as border plants and they contain some beautiful gems. The kinds we have grown for several years and which are the most satisfactory are Bontou D'Or,

Gesneriana, Gesneriana *Spathulata*, Golden Crown, Golden Eagle, Isabella, Picotee, May Blossom, White Swan, Summer Beauty, Bizarres, Bybloemens and Roses.

Out of a number of Darwin tulips we planted in the border five years ago the following are in bloom now: Glory, Gustave Dore, Herold, Hippolyte, Liberia, Longfellow and Olga. The extraordinary length of stem and their distinct and peculiar colors are bound to make them general favorites especially as border plants.

Some of the species that are showy and effective are Batalini, *Clusiana*, *Didieri*, *Grergi*, *Oculis-Solis*, *Persica*, *præcox*, *sylvestris* and *vitellina* and *retroflexa*.

EARLY BLOOMING HERBACEOUS PLANTS

Very few of the herbaceous plants in the border blossomed this year in April. With the slightly advancing temperature in the early part of May we had a splendid show of flower. The flowering season of the early kinds has been exceptionally prolonged this season owing to the coolness of the weather. *Arabis albidia*, *Phlox subulata*, *P. procumbens* and *P. Stellaria* flowered most profusely. A charming yellow flowered plant is *Adonis vernalis*. This plant is rather scarce and ought to be

Broad-leaved Saxifrages.

seen in collections more frequent than it is now. *Aubrietia deltoidea* and *polemoniums* are fine for shades of blue. The globe flowers are valuable on account of their soft, pleasing shades of yellow. The most satisfactory are *Trollius Asiaticus*, *Europæus* and *Japonicus* variety *Excelsior*.

The large broad-leaved saxifrages are bold and imposing plants. The kinds we grow are *cordifolia*, *crassifolia* and *ligulata*. Near the front of the border *Veronica gentianoides* and *Orobis vernus* lend shades of color which are pleasing at this time. The finest columbine is a natural hybrid between *Aquilegia cærulea* and *A. vulgaris*. This plant does not deteriorate like some of the columbines. We have grown it five years and it seems to get stronger each year.

Dicentra spectabilis is one of the most pleasing plants; it is thoroughly hardy and reliable. Its pleasing color, gracefulness and other good qualities make it one of the most valuable plants for the border. *Lychnis lapponica* is a new plant that promises to be a favorite. It grows only about six or eight inches in height and is now completely covered with its cluster of pink flowers. The forget-me-nots that we like the best for border use are *Myosotis sylvatica* and *Myosotis*

sylvatica variety alba. These are more graceful and airy than many of the stiff, flat kinds one often sees.

Viola cornuta and its white variety are valuable early plants and so are the varieties *Administration* and *White Perfection*. Clumps of English primroses and polyanthus are always pleasing and fascinating.

The only pæonies in bloom are *anomala*, *tenuifolia*, *tenuifolia hybrida*, *arietina*, and *Barri*. The large single flowers and the nicely cut leaves of these early flowering species are quite attractive. Irises in bloom are *pumila*, *olbiensis*, *olbiensis* variety *sulphurea*, *nudicaulis*, *florentina* Germanica variety, *Purple King* and *cristata*.

Good practical advice at this time is to keep the hand fork busy weeding out switch grass and other obnoxious weeds which are sure to be annoying. Now is an opportune time to begin to take notes of plants that are wrongly placed so that they can be moved in fall to places where they will make more pleasing combinations of color.

British Horticulture

THE STRAWBERRY CROP

The unfavorable weather which has marred the opening of the summer has caused a great deal of anxiety amongst strawberry growers, particularly those who are growing for the early market. A correspondent in "Garden Life" points out that in America it is a common practice to apply after flowering a dressing of nitrate of soda at the rate of about a hundred weight per acre, and as it has been shown by Dr. Dyer's experiments that artificial fertilizers not only increase the crop but also hasten its ripening he suggests that the practice might with advantage be adopted in Britain. The writer also shows that apart from late frost the strawberry is fortunately not exposed to many risks. There are two fungoid diseases by which it is sometimes attacked—mildew, easily recognized by the white threads which spread over the foliage and fruit, and leaf blight, distinguished by red patches on the leaves. Both may be cured by spraying with Bordeaux mixture. Amongst insects, the most troublesome are red-spider, chiefly under glass where the plants have been kept too dry, and several of the ground beetles. The latter eat the seeds, and in consequence the fruit instead of swelling is small and hard. These beetles are usually trapped by means of tins half filled with sugar and water sunk to their brims between the rows in different parts of the bed.

A VISIT OF FRENCH HORTICULTURISTS

A party of French gardeners took advantage of an excursion arranged by a trade society this week and visited London, where they were accorded a genial welcome. They visited the great Temple show on the second day, and were delighted with the magnificent display. The staging of the plants evoked their warmest admiration. A hearty greeting was extended by the officials of the Royal Horticultural Society. After making a tour of the tents the visitors saw the chief

places of note in the Metropolis, including the parks and the famous Kew Gardens, whilst some of the party sampled the eloquence in the House of Commons, and exchanged compliments with some of the members of Parliament who are interested in promoting a good feeling between Britain and France. In the evening the inevitable dinner took place, the visitors being the guests of British nurserymen. There was a pleasant interchange of good wishes between representatives of the two countries. Many of the British nurserymen retain happy recollections of the kindness they have received when making a tour of inspection in France, and the present visit afforded a splendid opportunity for showing their gratitude. Altogether the trip was a great success, and the Parisians returned with very pleasant remembrances, besides being impressed with the high standard reached at our premier show.

A SALE OF ORCHIDS

An important sale of orchids belonging to the late Sir Frederick Wigan, recently took place in London, with very satisfactory results, the total realized being about £4,000. There was a good attendance of buyers, amongst whom there was a great keenness to secure lots, especially for the white cattleyas, and the remarkable hybrids. Three plants of *Miltonia vexillaria Memoria G. D. Owen* realized 500 guineas, 420 guineas, and 390 guineas, respectively. *M. v. alba* made 38 guineas. *Cattleya labiata alba* sold for 66 guineas, *C. l. Cooksoniae*, 72 guineas; *C. Mossiae The Queen*, 21 guineas; *C. M. Wagneri*, 28 guineas; *C. Schroderae alba*, 27 guineas. A good type of *Sophrocattleya Doris* made 40 guineas, whilst a smaller plant realized 13 guineas. A fine specimen of *Cymbidium Devonianum* sold for 32 guineas. *Megaclinium falcatum*, 6 1-2 guineas. Some of the smaller plants made good prices. There was a keen competition for the rose-blotched *C. bellatulum Princess Clementine*, which went for 44 guineas. The high prices which prevailed indicate that there is no decline in the value of the best kinds of orchids, and that there is still an unlimited demand for some of the choicest specimens in spite of the high value placed on them. The cult of the orchid is as flourishing as ever, although for the rarer specimens orchid growing must remain the hobby of the rich. There is a remarkable fascination in the collection of the rarer specimens.

CHRYSANTHEMUM AND CARNATION SHOW

At the next market show, arranged under the auspices of the National Chrysanthemum Society, a new departure is to be made in the shape of carnations. There are several market florists who cultivate tree carnations to perfection, and there should not be any difficulty in arranging a good display. The committee making the arrangements include Mr. A. Smith, the raiser of Britannia. In the chrysanthemum section prizes will be offered for exhibits of market growers, nurserymen and commission salesmen. Special awards will be made from the best novelty not in commerce, the best packed two boxes of market bloom, and the best memorial design of chrysanthemum blooms. In the carnation section prizes will be awarded for a collection of winter-flowering carnations in vases to fill a table space of 8 ft. by 3 ft. also for 36 blooms of various tints.

Horticulture takes the lead

Attention is called in the columns of our New York contemporary to the "improvement, contemplated and current" instituted by our Canadian contemporary in the exclusion from its reading columns of cheap jokes and personal comments "such as those that disfigure the columns of some of the United States trade papers." We agree with our friend in New York that this is a sensible course. We also respectfully call

attention to the fact that HORTICULTURE was the first to take the step in the direction of a more elevating and dignified range of reading matter. We are glad to see our neighbor across the line following in HORTICULTURE's footsteps in this reform. As in its case, "a few florists have found fault with this policy," but we think it is now pretty evident to all observers that no mistake was made. We note with pleasure the improvement more or less noticeable in the reading material handed out by our three older contemporaries since it became evident that HORTICULTURE's policy was meeting with widespread approval and it was demonstrated that a florists' and gardeners' paper could find ample support without limiting its contents to the calibre of the least intellectual of its readers. Let the good work go on.

The nurseryman and his sphere

In another column we present the annual address of President Harrison before the American Association of Nurserymen, in session at Detroit this week. It is an interesting document containing much food for thought on the part of workers in other departments of culture as well as of the nurserymen. On this occasion we would mention but one point in Mr. Harrison's address, and that in the way of friendly criticism. He seems to have overlooked that sturdy department of the nurserymen's trade which has shown such a marvelous growth of late years and offers so much of promise for the future—the ornamental section, trees and shrubs which are planted mainly for their beauty and their shade. Consistently with this omission, in his favorable comments on the horticultural press, we note that the fruit grower and the farmer, the fruit and farm papers only are recognized. He then says, with truth, that "the nurserymen are the poorest advertisers and it is our own fault." We would respectfully submit that so long as the nurseryman persists in his assumed indifference towards that horticulture which is today showing the greatest progressive vitality, just so long will the above criticism by the president of his Association hold good.

The horticulturists' interest in nature

We are pleased with the approving response accorded by our readers to our recent appeal on behalf of our forests and the wild creatures which Nature ordained should do a large share towards maintaining those conditions needed to make the world a comfortable and luxuriant abiding place for mankind. We are told that it was man's own folly that lost to him forever the beautiful Eden which had been given him for a home, yet the lesson seems to have been wasted on us, for despite all our assumption of intelligence we are surely disobeying in the most flagrant and reckless manner natural laws which are inseparable elements of our existence—laws as inexorable as that which exiled Adam and Eve from their garden habitation. Where shall we look if not to the horticulturist, closeted as he is with Nature in all his operations and interests, for earnest pioneer work in awakening the country to the impending calamity, the burden of which already begins to weigh upon us? When we reflect that within the past year or two an organization of fruit growers and farmers has petitioned a State legislature for the right to exterminate the robin, the ignorant Italian and his mania for bird-killing should not surprise us but rather bring us to a realization of the magnitude of the task ahead before a healthy public sentiment can be fully developed. The two communications on another page of this issue are timely. Let us have some more of the same kind.

The Tomato

This vegetable is constantly advancing in importance as a garden product. This fact has induced a large degree of patient application in hybridizing, with a view to producing new and improved varieties, and many kinds, with some points of superiority, have been brought out within the past few years. Among the generally recognized points of merit in the tomato are,

earliness, smoothness, flavor, and solidity or fleshiness. To combine these in the greatest degree is the aim of those attempting to produce varieties that will be better than their predecessors. Of these qualities, earliness is especially essential to the market gardener, for the reason that, by the ordinary mode of forwarding for ten or twelve weeks by means of hot-beds, or forcing houses, late varieties perfect scarcely half their crop while the earlier kinds ripen all their fruit during the summer months, and a large proportion before the markets have become over-supplied and the price scarcely remunerative.

WORKING FOR EARLINESS

Earliness in the tomato may be induced by selection, and also by acclimation. Growing successively from seed of the earliest ripened fruit will produce favorable results, and when this is combined with acclimation to high latitudes, a difference of several days in the earliness of a given variety may be obtained. Solidity, or fleshiness, which is more peculiar to the medium and late varieties, must be reproduced in earlier forms mainly by hybridization. To the accomplishment of this result the efforts of many cultivators have been directed for a series of years. New varieties in great numbers have been introduced to the public through the seed-growers and dealers of the country, while many of various degrees of merit pass unnoticed, or have only had a local introduction.

STANDARDS INFLUENCED BY LOCAL CONSIDERATIONS

It would seem useless to multiply varieties unless the acme of perfection could be reached, and a kind produced that would prove to be in advance of the present standard sorts, although it must be borne in mind that there is a great diversity of tastes, influenced, no doubt, by local considerations. In the southern States, late varieties, with fruit of large dimensions, are much in favor; while in the neighboring Dominion, the earliest only are popular or productive. The canning trade, which has attained large proportions, calls for kinds of tolerable smoothness and solidity.

The fruit put out by market gardeners, generally, is not as good as one might expect, owing to the fact that a good deal of poor seed is saved and used. Too many growers of seed sell their earliest and best fruit; indeed

continue to sell as long as it will pay to gather for the purpose, then the late and ill-formed are ground up for seed, to be sold cheap. Tomato-growers should save their own seed from the earliest and most perfect specimens, or buy of those who have consciences, as well as a thorough knowledge of their business, and never grumble at the price. Wait for the crop, and then, if it is not good, scold.

A BIT OF TOMATO HISTORY

The prevalent impression that tomatoes were not known to be edible more than eighty years ago, is thus accounted for by an authority:

"Seed of the Tomato, in all probability, got into some region where nobody knew what it was. People sowed the seed and saw that the plant produced a beautiful fruit, and so they adopted it for ornamental purposes, not knowing it to be edible; and having no name for it, they, since all things must have a name, called it a 'Love-apple.' Then some writer wrote it up and gave it notoriety as the 'Love-apple,' and thus the impression of its non-edible character became general, even working its way and taking possession, as a matter of history, in regions where the tomato had been so long and favorably known as an edible fruit."

H R Peachey.

Heating Orchards

HORTICULTURE of May 14, 1907, contains an article on "Spring Fruit Protection" which is interesting, showing how smudges made of leaves, sawdust and the like help control the frost situation in Germany. Here in California I recently ran across an experiment tried in an almond orchard of twenty-six hundred trees which presents some features worthy of consideration.

The orchard is located on low ground in a cold situation about four miles out of the town of Chico and for several years past has lost its crop because of late frosts. This year the owner, a progressive doctor, decided to see what could be done towards controlling conditions there. He obtained a number of cans made like coffee pots, that is small end up, capable of holding each about three quarts of crude oil. On the night of March 11 the thermostatic arrangement in the orchard sounded a warning gong as the temperature dropped to the danger point. Hastily turning out, the men set the oil on fire—the cans having been arranged previously—by means of a teaspoonful of gasoline placed on top and lighted. Six hundred and thirty-five cans were used for the twenty-five acres and were burned for one and one-half hours, consuming in that time approximately one quart of material each. The oil made a flame five inches in diameter and one to two feet high, actually heating the orchard. When the critical period was passed the flame was shut off by putting on tin covers.

The pots were supplied with two three-eighth inch holes, on opposite sides near the top to act as safety valves. In all eighty gallons of oil was burned at a cost of two and one-half cents a gallon, this amount raising the temperature four degrees and safely tiding the trees over. The only defect is that the firing wasn't started quite early enough, the temperature being perilously close to the danger point when the last pots were fired. This could be overcome by having an alarm sounded at two or three degrees above freezing. In this case the experiment was a success although nearly 28 degrees was reached before morning.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

The most striking feature at the Massachusetts Horticultural Society's exhibition on Saturday, June 8, was a remarkable collection of seedling tree peonies from Prof. C. S. Sargent. The pleasing colors and size of the flowers were something very unusual.

R. & J. Farquhar's wistarias in tubs were very fine and were a great attraction, as was the collection of tulips from the same firm, which included many very fine varieties of Darwin and other late flowering kinds. The most notable in the collection were large vases of *Tulipa Picotee*, *Gesneriana* and *Bouton d'Or*. *Aquilegia coerulea* and *gladulosa* were very fine amongst their herbaceous plants.

The Blue Hill Nurseries had a fine collection of herbaceous plants, the best thing being large vases of the different kinds of *trollius*.

The Botanic Garden, Harvard University exhibited all the different types of tulips such as: Bizarres, by-bloemens, roses, breeders, Darwins and a number of species of late flowering kinds.

The new hybrid shrubby *Calceolaria Stewartii* was exhibited again by James Crosbie, gardener for Mr. Tufts of Medford. The specimens were exceptionally well grown. The same exhibitor had a remarkably well grown plant of *Clerodendron Thomsonae*.

J. E. Rothwell made a superb display of orchids, filling ninety-five vases.

The opening of the exhibitions on Sundays to the public proved very attractive, and the large hall was so crowded that it was almost impossible to take notes there.

Prize Awards.

Awards for Plants and Flowers—Wistarias, R. & J. Farquhar & Co. Hardy Azaleas, 1st, Wm. Whitman; 2d, Mrs. A. W. Blake. Tree Peonies, Wm. Whitman. Hardy herbaceous flowers, 1st, Blue Hill Nurseries.

Silver Medals—R. & J. Farquhar & Co., *Spiraea Japonica* "Queen Alexandra"; Prof. C. S. Sargent, display of seedling Tree Peonies.

First-Class Certificate of Merit—James Crosbie, superior cultivation of *Clerodendron Balfourii*.

Honorable Mention, Prof. C. S. Sargent, *Syringa pubescens*; Dr. C. G. Weld, lily of the valley.

Awards for Vegetables Asparagus, 1st, Geo. F. Wheeler; 2d, W. J. Clemson; 3d, A. E. Hartshorn. Carrots, 1st, W. W. Rawson; 2d, A. E. Hartshorn. Cucumbers, 1st, Geo. D. Moore; 2d, W. W. Rawson; 3d, A. E. Hartshorn; 4th, W. J. Clemson. Lettuce, 1st, W. W. Rawson; 2d, Geo. D. Moore; 3d, Wm. Whitman; 4th, W. J. Clemson. Radishes, 1st, W. W. Rawson; 2d, W. J. Clemson; 3d, A. E. Hartshorn. Rhubarb, 1st, Geo. Page; 2d, W. J. Clemson; 3d, A. E. Hartshorn. Spinach, 1st, W. Heustis & Son; 2d, Geo. D. Moore; 3d, W. J. Clemson. Collection of vegetables, 1st, W. J. Clemson.

NEW HAVEN HORTICULTURAL SOCIETY.

At the meeting of this society on June 1 Arthur Grave, of the Sheffield Scientific School was the speaker of the evening. William Beattie exhibited the first lettuce of the season which weighed 24 ounces. The preliminary schedule for the November flower show can now be obtained.

PITTSBURGH AND ALLEGHENY FLORISTS' AND GARDENERS' CLUB.

The club met on June 4 with a good display of flowers and good attendance of members for the season. The Finleyville Floral Co., of Finleyville, Pa., showed an extra fine lot of carnations. Dr. Shafer showed through James Hutchinson, *Cypripedium Lawrenceanum* and *Odontoglossum Ruckerianum*. While there are no commercial orchid growers in Pittsburgh or vicinity Mr. Hutchinson sees no reason why orchid growing here for commercial purposes should not be a success if carried on outside the pale of Pittsburgh's smoke and soot. Fred Bartsch showed a choice collection of geraniums.

G. J. Learzaf showed a geranium, sample of quite a portion of his stock, in which the leaves dry up and wither away beginning at the edge, the plant blooming normally in the meantime.

G. & J. W. Ludwig of Allegheny had an interesting exhibit of Darwin tulips, *narcissus poeticus*, *Bride*, *Bridesmaid* and *General MacArthur* roses; also summer chrysanthemums and the common field daisies, which latter they have a way of putting on the market some three weeks ahead of their blooming season in the fields. Jno. Bader showed palms, marantas and *Whitmani* farm. The latter, while very beautiful, was thought to be dependent on greenhouse conditions than the Boston fern. The Phipps Conservatories had Japanese tree peonies in variety, the new pink rose *Annenchen Muller*, *Lilium Rubellum*, *weigela* and *spiraes* in variety. Bechtel's double flowering crab and other flowering shrubs.

It had been intended to have a display of peonies, but excepting the Japanese tree peonies and a few of the old officialis, none were in bloom. Several members had been appointed by the president to speak on plants and flowers most in demand on Memorial Day, but with one accord they all declared they could only say that anything that bore even a semblance of a flower sold freely on that day.

The subject for the July meeting will be the July picnic, S. A. F. August convention and seasonable plants and flowers.

H. P. JOSLIN, Secretary.

NEW LONDON COUNTY HORTICULTURAL SOCIETY.

The meeting on June 3 was held at Norwich, Conn. President Head announced that prizes had been offered as follows: \$15 by C. H. Totty, Madison, N. J., for the fall show; \$10 to be known as the Bay State Nursery prize; a medal by Lyon & Ewald of New London, for sweet peas. Addresses were made by J. H. Slocumbe on Summer flowering bulbs, and by President Head on vines.

The backward season has made it necessary for the Amateur Horticultural Society of Springfield, Mass., to give up their rose show on June 25.

NEW JERSEY FLORICULTURAL SOCIETY.

The regular monthly meeting was held on June 7. Among the exhibits of special merit were natural hybrid No. 1, orchids, *Cattleyas Mossiae* x *C. Percivaliana*; *Cattleya Mendelii* superbissima, of remarkable size and beauty measuring eight inches across, the first season of its blooming since introduction; *Phalaenopsis Cynthia* (*Schillerae* x *Aphrodite*) and a white *Macrantha Kunastiana*, from Lager & Iurrell of Summit. Besides the usual meritorious orchid display were a new rambler rose, *Julius Roehrs*, from *Julius Roehrs Company* of Rutherford; *Odontoglossums vexillaria* and *Laelio-Cattleya Martinette*, from George Graves, gardener Edwin Thomas; Veitch's hybrid columbine, *Gladolus Peachblow* and carnations *Enchantress* and *Victory* from Charles Hathaway, gardener Max Schneider; roses *Richmond* and *American Beauty* from John Crosby Brown, gardener Peter Duff; specimen palms from the Colgates, gardener William Reid, and Stewart Dickson, gardener Albert Larson. The promised rose display has been given up because there were no roses. The schedules for the forthcoming fall exhibition were distributed and the dahlia night for the September meeting discussed.

J. B. DAVIS.

THE COLUMBUS FLORISTS' CLUB.

By invitation of the Fifth Avenue Floral Company, our club on June 3, held its regular meeting at their greenhouses. The largest gathering of the year was on hand. President Stephens was in the chair, and every other officer was present. Announcement was made of the winners of the largest number of point awards, secured during the past season (October to May), for exhibits of plants and flowers. The first prize of \$5.00 was awarded to I. D. Sieber, with 123 points. R. A. Currie, with 83 points, took the second prize of \$3.00; the third award of \$2.00 went to Sherman F. Stephens, who had 60 points. These point prizes have secured a fine display at every meeting the past season. The progress made in regard to the annual field day, to be held July 17, at Buckeye Lake, was reported by James McKellar; the members have very generally signified their intention of going. The committee have arranged base ball, sports and games, with suitable prizes. M. B. Faxon made the final report of the vegetable and flower seed packet distribution to the school children; over three thousand children have been supplied, and much more interest than ever before manifested in the work. Frank Kemp, who is with the Clover Hill Greenhouses, was elected an active member. The rose and strawberry show will take place Tuesday evening, June 11. The president called our chrysanthemum growers' attention to the coming show, and urged all to prepare for it. The business meeting over, a very excellent collation was provided by our hosts. Then there was music, games and a social time until the midnight hour.

AMERICAN ASSOCIATION OF NURSERYMEN.

The American Association of Nurserymen is holding its annual convention in Detroit, Mich., as we go to press. An attendance of 400, some from Germany, France and England and much enthusiasm over the royal welcome extended by the Detroit city officials, florists and nurserymen is reported. Below we give the address of President Orlando Harrison at the opening of the first session, in Hotel Cadillac.

PRESIDENT'S ADDRESS.

Fellow Nurserymen and Members of the American Association of Nurserymen: After the cordial greetings we have just heard, every nurseryman should feel at home in the city of Detroit. We are welcomed by one of our statesmen, a nurseryman, and by the mayor of this great thriving convention city, representing more than four hundred thousand citizens.

This beautiful city of the straits, one of the most charming of American municipalities, with its healthful surroundings, its wealth and high social culture, needs no extended praise at my hand.

The year passed has been a notable one, and the whole country is at the flood-tide of industrial development. Never before in our history have we seen conditions so prosperous. The word prosperous is putting it mild. Every branch of business seems to be in a thriving condition—our neighbors making millions in manufactures, men leaving the farms for city life, our labor leaving the nursery and going to the railroads and many other industries which can and do pay more for their labor. One can hardly name a business enterprise but what has been profitable.

Our Finances.

When I accepted the presidency last June, I was mindful of the fact that necessary funds should be provided for the expenses of the special representative appointed; keeping this in view I have been careful to avoid any experimenting with our treasury and I am pleased to state what you already know that it has not been necessary to call on you for additional guarantees, as \$3,000 was promptly provided by our Ways and Means Committee.

Recommendations.

Seeing the conditions that confront us as a body, permit me to make a few recommendations, which in my humble judgment will be a great benefit to the association.

First, that we establish a claim department, and appoint for its guidance an advisory board, or the Executive Board may act as the advisory, for adjustment of all disputed claims between nurserymen, as well as with railroad companies, express companies and others. A fee should be charged when claims are entered, and a per cent. charged when collected.

Second, I earnestly recommend that there should be a closer co-operation between the nurserymen of this country and their respective State Experiment Stations, in the testing of new varieties. We have in the Experiment Stations an organization designed for the purpose of trying new kinds. We should see to it that a variety has a fair test and

that it is not disseminated until it has proved its value for some part of the country.

Would it not be a good plan for originators of new varieties of fruits to send trees under restriction to the Experiment Stations for trial, before they are generally distributed and offered to the trade.

Horticultural Press.

The horticultural papers of the country are doing a great work for the nurserymen. They are the text books for the prospective fruit grower, and the nurserymen should get in close touch with the editors and show them just what we are trying to do for the fruit grower, that they may better understand what difficulties we encounter to grow a good sound merchantable tree.

It is through the press we learn of the successful peach orchards of the south, the apple orchards of the west, and the great opportunities that have been overlooked in the northern, eastern and New England states.

I contend it's the duty of an editor to know something about the firm he is advertising in his columns, that when asked about them he can answer questions more intelligently. He should, if possible, visit the various nurseries with whom he is doing business, then he is in a position to help his customers.

The nurserymen are the poorest advertisers of any great industry and it is our own fault.

There is more real live, instructive, interesting advertising that can be gotten up, showing the many advantages the nursery interests are to a town, county or state, and the government than in any other business that can be named. Our whole life work is a creation of the germs of horticulture, and our experience is the guide to cultivation and the foundation of prosperity. A true nurseryman is a genuine public benefactor, and because I consider it one of the choicest professions I would not exchange my occupation for any other; but I believe in order to attain the greatest success we must learn to help others.

What a small part of this country is utilized for fruit growing according to its possibilities. I am sure there is not a nurseryman here who cannot point out great opportunities for fruit growers; these opportunities must be made known to the millions of city people who are anxious for a country home.

If nurserymen will get closer to the editors of fruit and farm papers, inform them how we bend our energies to serve the fruit grower, and how certain enthusiastic, energetic fruit growers are succeeding it will inspire others to do likewise.

The Business Side.

Fellow nurserymen, if we are to succeed, we must have a great demand for our product—the tree.

The planting of trees over the country is increasing, but not in proportion to the increase of population. The information contained in the horticultural and agricultural press has been an advantage to all. Many sales have been made by the tree agent, after the fruit growers and farmers have learned through the press of the pleasure and profit in fruit growing. It helps to create a

demand. In fact any literature on fruit growing is a decided help to nurserymen and growers alike. It seems to me we are not attending to this in a systematic, business-like manner.

We, as nurserymen, should look after the young men who are graduated from the colleges, and turn their attention to the fruit industry of the country, and show them the advantages to be derived from an outdoor life and encourage them to adopt horticulture as a business.

Could we not, through the secretary's office establish a Bureau of Information, by which young men with both the necessary scientific and practical training to plant and manage orchards could be brought into touch with the fruit growers who are in need of such help? It seems to me this would encourage tree planting, particularly in localities where men are deprived of going into the orchard business. We need such a bureau for the nurserymen's help through which he could get competent foremen and assistants.

The American Civic Association.

What a grand work the American Civic Association is doing. Their work is an advance agent for the nurseryman, getting together, inspiring us with new life and vim, creating a desire for new fruits and more attractive homes. If we could only induce every city and town to have a Civic Association it would be greatly to our interest.

Fumigation.

Another matter that should receive the careful attention of this Association is the criticism of planters relative to the fumigation of nursery stock. Many of the most observant tree planters object to having their trees fumigated. Their experience is that dipping is the safest, and most effective method and they prefer to do the dipping themselves. Evidence of the benefits derived from dipping is encouraging. This is extremely important to nurserymen, for we know only too well that fumigation is costly and requires extreme care. The laws of the several states respecting fumigation are stringent and I might say exacting, and the nurserymen have faithfully endeavored to meet their requirements but when fumigation is objectionable and other means can be employed that entails less expense and is equally or even more effective in controlling the insect pests, we should know it; so from the criticism about fumigation and the results obtained by dipping, I feel it a duty to bring the subject to your attention, for such discussion or action as in your judgment the importance of the matter may suggest.

Legislation.

It is with great pleasure we welcome the Committee of Economic Entomologists, sent here to confer with the nurserymen in order to improve the present condition, governing inter-state shipments of nursery stock. It is earnestly hoped that some satisfactory means can be arranged in the near future whereby the existing troubles in regard to the inter-state transportation of nursery stock may be mitigated to a large extent.

I understand at the last meeting of

the Association of nursery inspectors, a resolution was passed, favoring general control of the inter-state transportation of nursery stock. This I consider a movement in the right direction, and would like a discussion of this important matter by the nurserymen at this meeting. A resolution should be passed expressing our views on the subject to be presented to the Secretary of Agriculture and the proper committee of Congress.

At the request of the Economic Entomologists, a committee of E. Albertson, Prof. John Craig and myself visited their meeting in New York City—Prof. Craig being a member of the special tag committee. We tried to make it plain that the nurserymen would welcome anything to advance the general plant interests of the country and would work in harmony with policy looking to that end. An invitation was extended to them to meet with us here. The committee on legislation has kept closely in touch with all matters pertaining to legislation. It is only by thorough and active co-operation on the part of the nurserymen of the country, together with the entomologists and with the nursery inspectors that such measures can be taken which will prove of benefit to all concerned. We should realize the importance of co-operation between the nurserymen and entomologists; I believe it is the proper solution of the question of uniform inspection, and transportation laws, and I trust this meeting will be the means of cementing the interests of the nurserymen and the entomologists more closely together.

I should also recommend that a committee of nurserymen be appointed at this meeting to conduct an active campaign looking towards something definite.

Dwarf Trees—Value of Seedlings and Stocks.

The value of dwarf trees should be brought to the attention of growers to be used as fillers, and it would mean the output of millions of trees, especially to small planters who have limited space, and might induce a start in fruit growing.

We should learn the great difference between the value of seedlings and stocks, for the fruit grower. Seedlings are of more importance to the nurseryman at this time than ever before, and we must look closer to the interest of our customers for success.

Our Committees.

All committees have worked faithfully and unselfishly for the benefit of the Association. I have spoken of the work of the legislative committee. A programme has been prepared by the programme committee with a view of focusing discussions upon some of the important points connected with nursery work. This committee has labored for twelve months and their work is commendable.

Transportation.

The subject of transportation has been left with the committee and special representative, with full authority to accomplish the best results, and his report will inform you of what has been done. It is necessary for us to keep in close contact with the railroad officials. The present agitation against railroads, with more than

four hundred state bills aiming a deadly blow at them have had an influence. There has been a change. I have not found it hard to obtain a conference with the proper authorities. What we want, need, and must have, is quicker movements of our trees and plants. I am creditably informed they are preparing for this movement. Many complaints are made against the express companies for goods lost or stolen, for which it is difficult to obtain satisfactory settlements.

Tariff.

The tariff committee has ever been ready to look after our interests; nothing of any special interest has come to my attention. Some large growers have thought the tariff we are now paying on seedlings was a waste of money, because the French cannot compete with the American growers if the tariff was abandoned.

Publicity.

We are greatly indebted to the publicity Committee in advertising this meeting in such a thorough manner, showing the great necessity of the nurserymen getting together at this time.

Advance the Price of Stock.

My last and most important recommendation to you, is, that we, as nurserymen, should increase the price of our trees and plants in proportion to the increased price in labor and other necessities for growing high grade nursery stock. There has been a demand for cheap trees, and the nurserymen, in their endeavors to meet this demand on the part of planters, have endeavored to furnish a cheap tree. By this we have been in error, and my observation is that the most progressive planters are demanding a higher grade of trees. This will cost the tree grower more money to produce but will also advance the price of his stock; this tendency is encouraging, as the final result will be the production of better stock which will demand a higher price. Our business does not differ from others; there is more profit in high-grade products, than of low grade. I contend that it is imperative upon nurserymen to produce a higher grade nursery tree, for which an advanced price will be paid, and the present is opportune for emphasizing that feature of our work.

Has the nurseryman prospered in proportion to other lines of business; if not, whose fault is it? I claim a nurseryman is entitled to as full remuneration as a man in any profession, for no man has to work harder and put in longer hours.

Fellow-nurserymen, there are many reasons why you cannot grow trees as cheaply as you once did. Are you determined to continue to sell at the same old price? I predict that greater care will be necessary to grow good stock and more rigid inspection will be insisted on in the future. Are you preparing to meet these conditions?

Let the nurserymen stand together. Let them have confidence and faith in each other; let them know the cost of production and charge accordingly. Let them grow good stock, study the needs of the planters, advise wisely; act conservatively; and above all so conduct their affairs as to bring credit and renown upon a business which is

among the most honorable and pleasant, open to intelligent men—that of the nurseryman.

SECRETARY'S REPORT.

Secretary George Seager reported the receipts for the year to have been as follows:

Membership fees	\$2,105.00
Advertising in Badge Book..	710.50
Sundries	52.30
	\$2,867.80
Number of members paying fees	457

A recommendation by Mr. Albertson to establish committees on rates, to combine export shipments to procure lower rates on boats and railroads was adopted.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The schedule of the C. S. A. is now ready and the following prizes are offered to be competed for at our next meeting which will be held in New York City, November 6 to 8.

The C. S. A. prize, a silver cup, for the best 10 blooms in show any color.

The F. R. Pierson Co., Tarrytown, N. Y., a silver cup for 10 blooms each white, yellow and pink.

A silver cup for 10 blooms Miss Clay Frick.

Vaughan's Seed Store, a silver cup for best specimen bush plant. Open to private gardeners only.

W. Wells of England, gold, silver and bronze medals for 6 blooms of Miss Mariah Hankey on 24-inch stems.

Nathan Smith & Son, \$25.00 for best seedling or sport of American origin, commercial scale.

Chas. H. Totty, Madison, N. J., \$15.00 and \$10.00 for 15 blooms 10 varieties, introductions of 1907, on 12-inch stems

A. T. Raddington, New York, \$10.00 and \$5.00 for 10 blooms Beatrice May on 24-inch stems.

A. J. Loveless, Lenox, Mass., \$24.00 for largest bloom in show, respectively, white, \$8.00; yellow, \$8.00; pink, \$8.00.

J. M. Thorburn & Co., New York, \$10.00 for 12 blooms 4 varieties 24-inch stems. Open to private gardeners only.

Henry A. Dreer, Philadelphia, \$15.00 for 24 blooms 6 varieties 24-inch stems.

E. G. Hill Co., \$15.00 for 12 blooms of President Loubet and \$10.00 for 10 blooms of Mad. Armand Detroyat.

Stumpp & Walter Co., New York, \$10.00 for 3 blooms of Morton F. Plant.

Peter Henderson & Co., New York, \$25.00 to the private gardener winning the greatest number of points, to be determined as follows; a first prize to count 10 points; a second prize to count 5 points; a third prize to count 3 points.

DAVID FRASER, Sec'y.

AMERICAN PEONY SOCIETY.

It being evident that the peonies in the testing gardens at Cornell and, in fact, with growers generally who are expecting to make exhibits at the annual meeting of the Peony Society, in Ithaca, N. Y., will not be ready in time for the earlier date. Notice has been sent out that the meeting and exhibition will take place on June 27 and 28 instead of 18 and 19 as previously announced.

The Great Temple Show at London, England.

SOME NOTABLE PLANT EXHIBITS.

Herewith I post you full report R. H. S. grand show at the Temple. It was crowded first day, and on the second three thousand people passed the turnstile, so altogether it was a record show, as doubtless today, the third day, at one shilling entrance, the masses have attended in thousands. The first day it was so dull and overcast in the afternoon that the prize cards could not be easily read, and the names, unless boldly typewritten, could not be deciphered. Scarcely any of the exhibitors got all the space they applied for, and many who had brought extras to fill up were obliged to leave them unpacked or to stand them behind the marquees, while even the outside groups, always a grand feature of this show, were too crowded. T. Cripps & Son showed Japanese maples, including all the finest of the palmatum and the septemlobum kinds. The uniformity of grouping was relieved by large plants of vitis and clematis. Color was given by some fine rhododendrons and Azalea Altaclarenae. A finish to the grass was formed by Cornus Moseriana tricolor, ivy Silver Queen, and Euryalatifolia variegata. Joining this was the noble bank arranged by John Waterer & Son, chiefly rhododendrons and Kalmia latifolia, the mass being broken up by the insertion of finely bloomed trees of Viburnum plicatum. Pink Pearl was again, both as regards color and size, much to the fore. L. R. Russell's group was broken up by tall plants of Osmanthus aquifolia purpurea—as standards, Eleagnus picta aurea and the noble E. macrophylla, while a glorious plant of the new golden variegated Dimorphanthus Manduricus flanked the group on either side and a background was built up of specimen hollies and ivies. This firm had also well flowered pyramids of Ceanothus Veitchi and Photinia serrulata.

Paul & Son, Fromow & Sons, Low & Co., J. Cutbush & Sons, Pulham & Son, David Russell & Sons, R. Smith & Co., and Veitch & Son were among the other outside exhibitors, all making large and striking groups of their several specialties. Entering the exhibition hall the first exhibits were those of Carter and Sutton, then the fruit display from the garden of Lord Aldenham, then began the banks of flowers, a center of attraction being cut boughs of the copper Austrian briar rose by George Mount. Baron A. de Rothschild put up a rich treat in fine fruits; George Bunyard showed about 100 dishes of apples and pears, fruit trees in pots and a glorious show of herbaceous perennials.

Scientific readers will like to know that Messrs. Storrie showed primroses, and their gradual evolution into polyanthus cowslips and the changes were accentuated by red cotton radiating from a center; they also had a white Polyanthus most singularly fasciated, and a Polyanthus primrose named Alchemist thought to be a veritable hybrid.

Jno. Laing & Sons had a bank of fine double begonias, but the grand-

est as yet shown, were those of Blackmore, Box, and A. Guillim, the last especially grand in new double forms—one, Tracendent was at least six inches over! H. B. May was an easy first with ferns—the “shot silk” Polypodium Mayi, Nephrolepis Whitmanii, Davallias effusa and repens, Osmunda palustris, Mayi and Nephrolepis todacoides and exaltata superba being extra fine.

Thomas Rochford & Son also had a lovely bank of Nephrolepis todacoides superba. Of roses, George Mount had the finest lot both for quality and variety, and the weather being cold and dull, they kept well even to the last day. He had few novelties. These were in Frank Cant's show. D. Harum, J. B. Clarke, Dean Hole, Poly. Etoile d'or, Mildred Grant, Florence Pemberton, Lady Roberts and Rambler Grus an Zobern, with Mons. I. Hill being most notable, while W. Paul's Snowstorm, so very aptly named, has come to stay, and Sinica Anemone is a chaste single white. Ben Cant had “Tea Rambler”, atropurpurea and others. MM. Van Waveren put up large plants of new astilbes, both pink, Peach blow and Queen Alexandra, novel but no gain in this flower.

I. A. Bruce brought from Manchester a good collection of Darlingtonias and sarracenias, which attracted much notice, but in contrast with a noble bank of caladiums, by Laing & Son, and Peeds—where were they? Laing's best were Rose Laing, Mons. Dellas, Souvenir de la Barronne, Madm. Box, Ignatu and Madame A. de Rothschild. Then came H. Cannell's glorious cannas—Crozy's and Pfitzer's best splendidly flowered, Wm. Pfitzer and Gerard Low, the finest. Phyllocactus German Empress, a lovely soft rose sort, will doubtless make a grand window plant. Tree and Malmaison carnations were well shown, by C. F. Waters, among them being some unnamed but very promising seedlings. Burnet says the best yellow yet is Ceres. A crimson seedling shown by C. Englemann is highly clove scented and will take the place of even such great favorites as Pike and Harlowarden.

Orchids, which must have suffered in the cold of Tuesday night, were plentiful, but the daily press may be left to appraise them for cash value, seemingly their only standard of appreciation. J. Linden (Brussels) sent Odontoglossum crispum “Reine d'Angleterre” and Cochleoda Noetlana, both of unique form, color and price. Just a line or two regarding Jackman's Gladiolus Cardinalis vars., Spanish iris and pyrethrums—they were lovely, but too crowded, and their finest white clematis, Mrs. Geo. Jackman and Ville de Lyon, and many fine herbaceous plants of recent introduction. Peed's gloxinias—mostly erect-flowered—were splendid.

Other notable exhibitors were J. Backhouse & Son, alpine plants; King & Co., sweet peas, Hobbies, Limited, roses; W. Cutbush, herbaceous flowers and lilies; Cheals, Peter Barr & Sons, John McKercher, C. Turner, R. C. Notcutt, Misses Hopkins and others, besides a number of the Agricultural Colleges, all of which we should like to describe in detail if space would permit. THOMAS BUNYARD.

NEW AND RARE PLANTS AT THE TEMPLE SHOW.

The great annual Spring Flower Show of the Royal Horticultural Society of England opened in London yesterday (May 28th) and continues today and tomorrow. I suppose that nowhere else in the world is there ever gathered together such a galaxy of flower riches as at the Temple Show, the orchid displays especially being unrivalled.

The Veitchian Cup, the highest honor that the show can bestow, this year was awarded to a magnificent group of orchids exhibited by Major Holford. The arrangement of the group was excellent, each plant being placed clear of its neighbor so that all were seen to advantage. Messrs. Sander & Sons and Mr. Jeremiah Coleman were awarded gold medals for their orchid displays.

The Roses.

Among the roses the ramblers were first favorites. Nothing attracted more attention than Hiawatha. Its profusion of crimson flowers, rendered additionally attractive, first by the bunch of yellow stamens and, when these fade, by the white eye that then becomes conspicuous, gained many friends. This year, as last, it was undoubtedly the rose of the show. A charming new rambling rose called Kathleen has made a very favorable impression. It produces loose bunches of pink apple-blossom-like flowers at the ends of the side roots. It is a multiflora variety of the same style of growth as Crimson Rambler and not of the Wichuraiana class like Hiawatha and Lady Gay. I noticed a remarkable new shrubby rose in the group from Messrs. Benjamin Cant, named Nance Christy. The leaves are unusually strong and look as though they might remain on the plants throughout the winter. The flowers are semi-double salmon pink. The only rose to obtain an award of merit was Dr. William Gordon, a handsome H. P. shown by William Paul. The blooms are bright pink, large and full and in their early stages the petals are exquisitely turned in the same way as those of La France. Two new Polyantha roses were exhibited. One, Maman Levavasseur, exhibited by MM. Levavasseur et fils of Orleans, was described as “a perpetual Baby Dorothy,” which I take it is intended to refer to Dorothy Perkins. The flowers, however, are not nearly so double as those of Dorothy Perkins, although they are more brightly colored and are very freely produced. The other variety is called Phyllis and was shown by Messrs. Merryweather, an English firm. The blooms are bright clear rose and the plants are said to blossom until the autumn.

Some Notable Plants.

Cheal's pink variety of Lupinus polyphyllus is a charming plant. Carter's Petunia Queen of Roses is very showy and in the mass would make a grand display. The color is bright rose and the bloom has a greenish white throat. Tuberous begonias were exceptionally fine and several new varieties obtained an award of merit. Mrs. Marshall, a striking double variety bright red with crinkled petal

edges, and Lady Cromer, a large bloom: the outer petals soft pink margined with white, were shown by Thos. S. Ware. Begonia, Mrs. Gwillim, a beautiful double flower, apricot-salmon, was shown by A. L. Gwillim.

Only one carnation was honored by the award of merit, the Malmaison variety Marmion, white splashed with rosy red, shown by H. Burnett. Azalea Mine, Anthony Koster, shown by Cuthbert, obtained an award of merit. It is a charming flower, soft yellow tinged with rose. Dracaena Victoria, shown by Messrs. Bull, has leaves creamy yellow with central markings of grey and green. A charming white poppy anemone called The Bride was shown by Messrs. Gilbert. So far as I know this is the only white poppy anemone with green centre and planted among the scarlet varieties it would make a striking display. Pink Pearl Rhododendron, tulip Gorgeous, an unusually large orange scarlet Darwin tulip, oriental poppy Princess Ena, apricot color with black centre, Kalanchoe flaminea (scarlet) Kalanchoe Kewensis (rose) were other new or striking flowers. H. H. THOMAS.

Certificates Awarded.

FIRST-CLASS CERTIFICATES.

Laelio-Cattleya Golden Glory, Major G. L. Holford. Miltonia Vexillaria, Major G. L. Holford. Odontoglossum crispum Solum, Sander & Sons; Odontoglossum crispum xanthotes, Sander & Sons. Cypripedium tibeticum, Jas. Veitch & Sons. Odontoglossum ardentissimum Robsonae John Robson. Odontoglossum gandavense, Charles Vuylsteke; Odontoglossum eximium King of England, Charles Vuylsteke; Odontoglossum caeruleum, Charles Vuylsteke.

AWARDS OF MERIT.

Cattleya Mossiae, Princess of Wales, Major G. L. Holford. Odontoglossum Thompsonianum superbum, W. Thompson. Brasso-Laelio-Cattleya Lido, Chas. Maron. Saxifraga aizoon rosea, Mr. Farrar, Craven Nursery. Primula X Unique, Jas. Veitch & Sons. Cytisus Firefly, R. W. Wallace & Co. Papaver Princess Ena, Amos Perry. Tulip Gorgeous, Alex. Dickson & Sons. Verbena aubletia compacta, Dobbie & Co. Actinidia chinensis, Jas. Veitch & Sons. Azalea Mme. Anthony Koster, R. & G. Cuthbert. Carnation Marndon, H. Burnett. Begonia Mrs. J. C. Gwillim, A. L. Gwillim. Begonia Rhoda Pope, T. S. Ware; Begonia Wm. Marshall, T. S. Ware; Begonia Lady Cromer, T. S. Ware. Rose Dr. William Gordon, W. Paul & Son. Caladium Thomas Tomlinson, Jas. Veitch & Sons.

DUTY ON RHODODENDRONS, ETC.

In the case of the application of P. Ouwerkerk for review of a decision of the U. S. General Appraisers the following reversal in favor of Mr. Ouwerkerk has been recorded.

U. S. Circuit Court, Southern District of New York, May 14, 1907. Suit 473.

Species of the laurel (*Aucuba japonica* and *Kalmia latifolia*) and of the rhododendron (*Rhododendron ponticum*), which retain their verdure throughout the year, are "evergreens" within the meaning of paragraph 252, tariff act of 1897; and under said paragraph seedlings of those plants are dutiable as "evergreen seedlings" rather than as "nursery stock."

INCORPORATED.

The Benjamin Chase Co., Derry, N. H., Benjamin Chase, president, John G. Chase, treasurer.

The Kentucky Blue Grass Seed Co., Mt. Sterling, Ky.; J. M. Bigstaff, F. Tabb, M. Cockrell; capital stock, \$8,000.

Orchard Grass Seed Commission Co., Frankfort, Ky.; W. J. Johnson, N. A. Hardin, C. R. Stoll, J. C. Pierce; capital stock, \$2,000.

Seed Trade.

It is said that the railroads have this year refused to grant the usual rates of one fare and a third for the round trip to the seedsmen's convention. In view of a recent decision of the Interstate Commerce Commission, that the rates made to theatrical companies were open to all, another way may be found of getting the desired rate. For instance, any ten or more persons starting from Chicago to attend the convention, can demand theatrical rates, and the railroads are compelled to grant them. Refusal to do so subjects them to the penalties prescribed under the interstate commerce law. It might be well for those proposing to attend the convention to test the temper of the roads on this point. Abrogation of all special rates is the only way of escape from them.

Crops on Long Island are from three to four weeks late. Potatoes, which are usually in blossom the first week of June, are barely more than out of the ground. It is usual for the first Long Island potatoes to be in the New York markets by July fourth, but it will be nearly August first before they will be in evidence this year. Such green truck as the farmers have to offer is bringing almost famine prices. Truck from the south is late, and going at fancy prices. Potatoes just coming in from North Carolina and Virginia and selling readily at from \$4.50 to \$5.00 per bbl. Some Bermudas came in last week and were promptly snapped up at \$6.00 to \$6.50 per bbl. Quite possibly the farmer may make fully as much money from the short crops as from the larger ones, but the public will see another upturn in the wheel of high prices. Much replanting has been done and truck may be cheap later in the season, but just now "garden sass" is well up among the luxuries.

J. M. Thorburn & Co. report a good increase in the total return of business this year. Their retail has shown a slight falling off, but the increase in their wholesale department has much more than made this good.

Wm. Elliott & Sons say business in the auction line is exceptionally good and prices above average. Their general business is better than usual.

There is nothing new concerning crops excepting further confirmation of the rotting of peas in the ground, also potatoes. In the case of seed peas this is beyond remedy, as firstly, there is no seed of most varieties, and secondly, it is too late. There is some chance for potatoes, but it is slim.

ties for vegetable raising presented there: "Tomatoes, egg plants, melons, water melons, squashes, in fact, every kind of vegetable, do exceptionally well in this country. These can be placed upon the American market well in advance of early vegetables from any other source which guarantees a handsome profit to the farmer. The freight rates on this class of produce are exceptionally low, and truck farming would appear to be the most remunerative industry open to the settler with small capital."

Seed report on cauliflower and cabbage from Denmark: We are taking pleasure in reporting to you that as far as the cauliflower is concerned the plants for this year's crop have overwintered fairly well, but the cabbage planted November last, especially the Danish Round-head (short), have been damaged by the black frost, and 30 to 40 per cent. of the heads died off, so it may affect seriously the quantity of the crop of seeds."—Hjalmar Hartmann & Co.

Howard M. Earl of Philadelphia, left for California on the 8th inst. on a crop inspection tour to that locality and other points west and southwest.

Geo. W. Karr of Wilkesbarre, Pa., paused at Philadelphia on his way to Atlantic City on the 10th inst. long enough to greet the members of the leading houses and renew the cordial feelings that have existed for over thirty years.

WASHINGTON GARDEN NOTES.

Garden seed planted in March have not yet matured. Usually, at this time in June, one is tired of peas, and beans are coming in to take the place of the former. This summer there have been, with few if any exceptions, no home-grown vegetables, save radishes and lettuce. Crimson Ramblers are not yet in bloom in any quantity, deutzias, sweet williams, daisies and weigelas are about the only things that are sufficiently daring to bloom; what few peonies there were are about gone.

ZIRNGIEBEL'S GIANT PANSIES

Fresh Crop

Now Ready

Famed for a quarter of a century and when you buy them you get the best in existence. I am continuing the pansy business on exactly the same standard as carried on by my father, the late DENYS ZIRNGIEBEL. None genuine unless sold by me.

GIANT FANCY. The NE PLUS ULTRA in Pansies. Trade packet, 1000 seeds, \$1.00.

FIFTEENTH NATIONAL IRRIGATION CONGRESS.

What has been known as the National Irrigation Congress heretofore bids fair in the future to become an International Irrigation Congress. The present year's meeting of this Congress, which will be held in California, at Sacramento, in the early part of September, has been attracting notice abroad, and the officials of foreign countries are expressing an interest in the meeting. It is understood even this early that Australia will be represented and some delegates are expected from there. This goes to illustrate the world-wide interest in Irrigation and Forestry—and the real value of this event to the agricultural interests of this country.

During the Irrigation Congress session extremely favorable railroad rates will prevail, and arrangements have been made for a thousand-mile excursion around the Sacramento Valley, as well as special trains and low rates for side trips, which will give Eastern visitors to the Congress an opportunity to see the agricultural and horticultural side of California which is seldom presented, and they will come in contact with practical irrigation study at the same time. Irrigation is a science now-a-days, and is being recognized as of importance in other sections than the purely arid, and the ability of the horticulturist to get the proper amount of water in his soil at the proper time and regardless of whether the season sends rains opportunely or inopportunely, is coming to be turned more and more to account, and as knowledge of such matters increase it comes to be reckoned more and more in value as dollars and cents.

The list of trophies to be offered at Sacramento continues to grow. It now numbers no less than sixteen handsome gold and silver loving cups and specially designed trophies, representing an aggregate cost of nearly ten thousand dollars. Competition is open to all States except California.

BRAINS are sed in mixing our PANSY SEED

"BODDINGTON'S CHALLENGE" mixture contains all the finest Giant strains—of the leading Pansy Specialists in the world—the Giant self colors, the Giant striped and margined, and the Giant blotched—all carefully mixed in proportion—the finest that money can buy—the finest your money can buy. A florist, who has grown it, said "Why don't you call it *Defiance*?"

Trade pkt. 75c, 1-4 oz. \$1.50, 1-2 oz. \$2.75, oz. \$5.00. New crop ready July.

THE DETERIORATION OF PLANTS BY FORCING: THE CAUSE; THE REMEDY.

(Abstract of Remarks by Antoine Wintzer, Before the Florist Club of Philadelphia.)

Are our roses deteriorating or is it imaginary on our part? The real or supposed deterioration of roses is the subject of considerable discussion whenever practical rose men meet at conventions or clubs. To me has been assigned by the honorable members of the Philadelphia Florists' Club the task of solving this rather knotty problem. Now while a man may give his own reasons on any subject it does not follow that he is right, and his experience may be at variance with that of others.

My honest opinion is that a great many varieties of roses have deteriorated. Why have they done so? I believe the main causes to be over propagation, unnatural conditions in growing the stock-plants, under and over watering, over feeding and various other causes too numerous to mention. We must also bear in mind the fact that thousands of new roses and types of roses have been originated during the past 25 years or more, less than 2 per cent. of which are heard of ten years after.

The Hybrid Tea roses (to the production of which, rose breeders are now devoting so much attention) were an unknown factor 35 or 40 years ago. The breeders at that time were disseminating more H. P. varieties than all the other classes combined, the majority of which were introduced by Verdier of Paris. It was through the efforts of the late Henry Bennett that the Hybrid Tea class had its beginning wherein Bennett gave us beautiful varieties in form and color. Nearly all his productions were lacking in vigor, and to a greater or less extent this has been the case with the majority of the Hybrid Tea roses since. Practical experience has shown that only a limited number of this class are strong, when field-grown in this latitude. In a great many sections of the South and Pacific States they seem to grow and thrive better than in this section, although, even in these favorable locations, they are not entirely immune from black spot.

Now what is the lesson the propagator can learn from observation? (1) Secure the best and most healthy field-grown plants for propagation, grow the cuttings from such, under natural conditions and continue on the plan for a number of years and the result will be that the roses so grown will not deteriorate. But it is of vital importance that the very best plants should be selected for breeders. This, in fact, is the secret of the whole matter, start right, keep on the right track, and you will stay right, and the stock you grow will be right.

Now in conclusion permit me to ask how many growers are there in the business, in the position to do this? With the wholesale prices of roses where they are at present there is surely an eternal unfitness of things in our present price of own-root roses.

Prof. Frederick E. Clements, Ph.D., has been elected head of the botany department of the University of Min-

A JAPANESE AQUATIC GARDEN IN PHILADELPHIA.

Our frontispiece and the other accompanying illustrations show what is said to be the most finished and beautiful example of Japanese aquatic gardening in this country. It is hard

to realize that this gem of miniature oriental scenery is located in the very heart of Philadelphia, yet this is a fact. It is the garden of J. H. Klauder, 1513 Allegheny avenue, Philadelphia, and considering the limited space and other difficulties, is

really very wonderful. The features are all drawn to a scale and it took many years to gather together the little rocks which figure in it. It shows a phase of gardening art which we think will deeply interest our readers and, compared with some at-

tempts at water gardening we occasionally see—square or oval stone margined basins surrounded with plantations of balsams, lantanas Centaurea gymnocarpa and similar incongruous material—it is not without its lesson.

EXPERIENCE WITH PEONY SEED.

I had a lot of seeds last year—1906—and I thought that, to make the labor short, I would collect them in two gatherings, so after gathering the first lot, I put them away in paper bags, two or three weeks, until I had made the last gathering, and then sowed the entire lot in flats, and placed them in an unheated greenhouse, covering them extra cold nights with old boards, although at times they were slightly frozen—in the meantime keeping the seeds moistened. Now, judge of my surprise when the last gathered seeds came up thickly, while the first gathered were yet hidden in the earth, and the earth still presents its unbroken surface. The seeds evidently holding to their tradition—not to come up until the second year—while the second lot are stealing a march on time and are coming with a rush. Now, why is this? The first lot of seed were of that rich nut brown color that the florist says is all right, while many of the second lot lacked that ripe look, and had an appearance of immaturity, but both lots appeared plump and full. Was Nature trying to harden the seed against the time of planting, conserving her forces, as it were, while in the second lot the germinating qualities were progressing to their final completion? Can any one recall a similar experience or suggest an explanation?

GEORGE HOLLIS.

South Weymouth, Mass.

CROTONS AT GIRARD COLLEGE.

Edwin Lonsdale, superintendent of the Girard College grounds has effected a number of improvements on the croton and has a fine display in store for the visitors in August. His efforts have been especially rich in the way of short-jointed varieties for edging purposes. Girard College may not be on the convention program but will well repay a visit.

The annual flower show of the Village Improvement Society, Southampton, Mass., will be held August 16.

BEDDING PLANTS

Of Every Description

Also a fine lot of Palms in all sizes, such as Kentias, Arcas, Latanias, Phoenix and Cocos. Pandanus Veitchii and utilla, Crotons, Dracaenas, Nepenthes, Arelas, Araucarias, Aspidistras, Ferns suitable for dishes, in leading varieties. Cibotium Schiedel from \$1.00 to \$3.00 each.

Will book contracts for Azaleas for future delivery. Wholesale Price List on application.

The Florists Supply House of America.

NEW YORK FLORISTS' CLUB.

The meeting for June, the last until September, on Monday evening, 10th inst., was a very interesting one although no special topic had been assigned for consideration and there were 55 members present. The subject of a club room, rented or owned, was discussed at length and was left for settlement by the board of trustees. J. C. Vaughan, who was a visitor, made some remarks relative to the National Flower Show to be held in Chicago, and F. H. Traendly stated that it was understood that all the money required for this affair had been guaranteed. The outing committee reported all ready for the picnic of July 2, with program of sporting events all ready and ample list of trophies. W. P. Craig was present with an exhibit of *Nephrolepis Amerpohlilii*, which the judges honored with a certificate of merit. Committees were appointed as follows: Transportation to S. A. F. convention at Philadelphia next August, Messrs. F. H. Traendly, John Young, J. B. Nugent; resolutions on death of father of E. V. Hallock, Alex. Wallace, Patrick O'Mara, John Birnie; on death of Julius Kretschmar, John Scott, Patrick O'Mara, A. Jaennecke.

NORTH SHORE HORTICULTURAL SOCIETY.

This society held its regular meeting June 7, President McGregor in the chair. John D. Morrison gave a very interesting and instructive lecture on insect pests. On June 21 Wm. Miller of Lynn will speak on Panama and the West Indies. The show committee wish to announce that owing to the backward season the rose show will be held at a later date than printed in the schedule, due notice of which will be given later.

CLUB AND SOCIETY NOTES.

The Elberon Horticultural Society, Elberon, N. J., will hold their rose and strawberry show on June 17.

The Lynn Horticultural Society, Lynn, Mass., held their meeting on June 3, and listened to interesting addresses by E. F. Dwyer on peonies and Rev. C. L. Peterson on The Sequoia tree of California. The annual rose exhibition will be held on June 22.

The Botanical Society of Pennsylv-

vania held its closing meeting on June 8. A reception was held in the Botanical Garden in the afternoon. In the evening the honorary president C. C. Harrison gave the introductory address, Studies in Economic Botany were discussed by R. H. True, and Dr. U. Gildersleeve spoke of The relations of bacteria and plant diseases. Stories of the familiar flowers were given by various members.

TO LAY OUT A TENNIS COURT.

Dear Editor:—

Would you give me the measurements and directions for laying out a tennis court, through your valuable paper, HORTICULTURE.

Thanking you for the same and trusting to see a reply in due time.

Sincerely yours,

W. McK.

The correct dimensions of a tennis court, can be best found in a little 10 cent publication by Spaulding, the athletic outfitters, who have branches in nearly all the large cities. Besides dimensions many practical hints are also given. The pamphlet can be procured in any sporting goods store. It would be impossible to lay down any one rule or method for constructing a court as the position, nature of the available drainage and several other things have to be taken into consideration, the two chief objects to attain being a perfectly drained court, and a surface that will keep perfectly smooth, damp enough so that it will not "dust," and at the same time not adhere to the tennis shoes of the players. The most perfect surface I ever saw was only attained after many things had been tried. The body of the court was built about 18 inches with stone, starting with cobbles and finishing off with the finest gravel, but every thing we tried, from all kinds of sand, sifted ashes, etc., would not give the necessary "firm" footing. At last we ran across a seam in a gravel pit, that was gravel and very coarse sand with small particles of clayey loam in it. This material when dampened and well rolled proved perfect and held for a season at a time.

CHARLES INGRAM.

BETWEEN YOU AND ME, What do you think of the Buyers' Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

OBITUARY.

Julius Kretschmar, aged 62 years, died at his home, Lincoln Road, Flatbush, N. Y., on Saturday, June 8. The funeral took place on Tuesday, June 11. Mr. Kretschmar was for many years a member of the Society of

JULIUS KRETSCHMAR.

American Florists and the New York Florists' Club. He was formerly in business in Flatbush and afterwards at West Nyack with his brother, H. G. Kretschmar. For some time he has been in precarious health.

PUBLICATIONS RECEIVED.

A Peony Check List. Including the leading varieties of Peonies of which authentic descriptions can be found in horticultural literature. Prepared by John Eliot Coit with the co-operation of the committee on nomenclature of the American Peony Society. Published at the N. Y. State College of Agriculture at Cornell University. In compiling this list of 2706 peony names, with numerous references, Mr. Coit has plainly performed a most arduous task. No claim is made for perfection or completeness but a good beginning has been made and with the foundation now laid the further prosecution of this useful work will be less difficult. The list is arranged alphabetically. Every one interested in the peony will want a copy.

NEWS NOTES.

Royston & Fenton have started in business in Evansville, Ind.

Wheadon Bros., 29 So. Warren St., Syracuse, N. Y., have gone out of business.

Samuel Cape has purchased the Butler street store of L. I. Neff, Pittsburgh, Pa.

Samuel A. Woodrow has started in the wholesale palm business at 53 West 30th street, New York.

The Mt. Desert Nurseries have opened their Main street store at Bar Harbor, Me., for the season.

The capital stock of the United States Nursery Co., Rich, Miss., has been increased from \$25,000 to \$75,000.

W. H. Siebrecht and wife of Astoria, N. Y., sailed on June 5 for a three months' trip in Holland, Germany and Switzerland.

Arthur Clark, Cambridge, Mass., has filed a voluntary petition in bankruptcy; liabilities, \$4795, of which \$117 is secured. There are about 70 unsecured creditors and no assets.

It is stated that John Hartje, a pioneer florist of Indianapolis, Ind., has retired from business and in the early fall will start on a tour of the world.

W. W. Seekins has recently secured a 99-years' lease upon the corner of Third avenue and Superior St., Duluth, Minn., and will erect a \$18,000 building thereon, with greenhouse in the rear. The store will be equipped with all modern conveniences.

Jackson & Perkins Company are establishing a specimen garden of roses which they intend shall eventually include all varieties that are sufficiently hardy for out-door planting in Western New York. More than seven hundred and fifty different kinds were set out the past spring, and many others will be added next season. In laying out the planting each class of roses was placed by itself, and under each class the kinds of similar colors are grouped together so as to facilitate the study and comparison of them. The garden will also be used as a place for carrying on hybridizations with a view to obtaining valuable new sorts, and especial attention is to be paid to this line of work in the future.

CUT FLOWER MARKET REPORTS

BOSTON The flower market continues in a very inactive state with prices depressed to summer level. It is not unexpected, however, as not much business was looked for until the schools commence to close when a change for the better is likely to take place. Stock of all kinds is plentiful, full crops of everything being on and the rose growers holding their old plants in the benches later than usual on account of the cool weather. It follows that the quality generally is very good. Lilies, like everything else are in overstock.

The week following **BUFFALO** Memorial Day was a dull one. An over-supply of stock was had with no prospects of an outlet. A few days of the worst kind of weather at the beginning did not help an already depressed market and by Friday everything on the line was overflowing, especially roses of all qualities. They simply could not be moved from the refrigerators and counters. Sweet peas were also plentiful, while out door lilac, lily of the valley, tulips of fine quality were had in abundance. It is hoped that the coming week will improve and the market will be in normal condition.

Trade keeps right **COLUMBUS** along good and will until people begin to go away for the summer—if there is to be any summer this year. Stock of all kinds since Memorial Day has become very much more plenty. Some of the best American Beauties of the season are selling readily. On the whole the past week has been very satisfactory for all. The seedsmen are busy with both plants and counter sales, late as it is.

The past week was **INDIANAPOLIS** a busy one, weddings, commencements and other social events creating quite a demand. Prices are not what they were a week ago but are satisfactory. Roses are plentiful; enough fine stock to be had in almost any variety. Beauties are in good demand as there are no outdoor roses to be had yet. The demand for carnations is still good, the quality and supply holding up well. Lily of the valley is quite a favorite at the present time the supply equal to demand. Lilies, peonies and iris are a little late but are handled in fair quantities. Sweet peas could not be better and are to be had in any quantity. The market is well supplied with greens of all kinds, snailax and asparagus having a good demand. Outside planting trade still continues good and probably will be till July 1st owing to backward season.

The wholesale flower **NEW YORK** trade has been generally dull and unsatisfactory during the past week, albeit the retail establishments are fairly busy with seasonable affairs requiring the use of floral decorations; the latter will be short-lived, however, as, despite the cool weather, the exodus to country places and Europe is quite general. Collections are reported as exasperatingly slow in wholesale cir-

cles and the approach of a long, unproductive summer is not a pleasing prospect. Receipts of flowers are still heavy but will soon fall off.

The early part of **PHILADELPHIA** the week was very satisfactory in trade returns but towards the end the situation underwent a radical change with the climax on Saturday when stock had piled up to such an extent that the distributing centers were buried. Even the street men gave but little relief and those of them with courage to chance big lots at bargain prices came out at the wrong end. The weddings and commencements seemed to be all billed for the early part of the week leaving a surplus later. Beauty, Liberty, Richmond, Kaiserin, Bride and Bridesmaid are of very good quality and clean up moderately. Carnations are of good quality but the demand is weak. The orchid market is on an even keel, not much stock but enough for the call. Lily of the valley is very good and finds a satisfactory outlet. Lilies have shortened up considerably. Sweet peas are now of better quality and much more plentiful. Gardenias are a fairly good proposition, the demand being excellent but there is too much Southern stock coming in to suit the local growers.

Trade keeps up **TWIN CITIES** fine, with stock plentiful and heavy demand. Bride and Bridesmaid roses are especially in demand. Weddings and graduation exercises through the northwest, in addition to the large city business, have made trade much heavier than we have had it in years. Plant sales also continue to keep up nicely. The inclement weather prior to Decoration Day has prolonged the planting considerably, and we can say that we are now in the midst of the planting season.

Owing to the several warm days of the preceding week, there was quite an exodus of the flower buyers from Washington, and in consequence business is beginning to stagnate somewhat. There are a good many commencements, however, that will very materially benefit the florists for the remainder of the month. There are not so many June weddings on the tapis as usual, which may possibly be due to the inability of one to tell what season we are now in.

BUSINESS CHANGES.

Frank McVaugh of Summit, N. J., has leased the greenhouses of G. W. Binsted.

The business of the Haskell Avenue Floral Co., Dallas, Texas, has been bought by E. H. R. Green.

The business of J. M. North at 616 Vandeventer St., St. Louis, Mo., has been bought by the Red Bud Floral Co.

By the retirement of Samuel Graff from the firm of Graff Brothers at Columbus, Ohio, the style of the house will become William Graff. Mr. Samuel Graff will hereafter reside in Chicago.

NEWPORT TRADE NOTES.

Florists, dealers and growers, are satisfied that Decoration Day business this year was ahead of that of any previous occasion, a greater number of plants and flowers being sold than ever before at prices fully up to the standard of other years; in fact flowers were higher in price because the supply, as far as Newport was concerned, was very limited.

Every man interested in bedding plants is now hard at work on them in one way or another. The growers are busy taking orders and delivering and the jobbing gardeners who have no greenhouses are just as busy planting. Geraniums are not over plentiful, in fact there is a scarcity of some varieties of flowers. Scarlet seems to sell much better than pink this year, although Beaute Poitevine is still favorable and bringing more money than any other variety.

Joseph Leikens has opened his store on the avenue; Wadley & Smyth have done likewise; Mr. Spalding of Hodgson's is expected daily to open up.

Several of the big seed houses in New York had representatives here last week hunting up bulb orders. I have not heard of any from Boston being around yet, but I suppose they will be here just the same and fare as well as the early birds. Roses are late in all sections out doors, in consequence I think the Horticultural Society will be compelled to postpone the date of the exhibition. D. M.

PHILADELPHIA NOTES.

Mr. Fetters, of Smith & Fetters, Cleveland, O., was a visitor in Philadelphia on the 10th inst.

Peonies in this locality are now in evidence and will be a glorious show for the next three weeks. They are almost three weeks late in arriving, like everything else outside. Tuesday, the 18th, has been fixed for the annual display at Horticultural Hall under the auspices of the Pennsylvania Horticultural Society. Outdoor roses will also be a feature at the same time.

DURING RECESS.

Deeside and Buchan were much in evidence in Philadelphia on the 3rd inst, the redoubtable Birnie of West Hoboken, with the local Ginger Jar under his arm, making a round of visits and interviewing some of the leading growers. This was Mr. Birnie's first visit since the Centennial 31 years ago. Mr. Birnie had the blues that morning from having listened too long to Job the night before, but a few hours of Philadelphia sunshine and good company dispelled the gloom and tipped with rosy fingers the everlasting hills, which soon echoed merrily with the tuneful strains of Moneymusk and the Marquis of Huntly. Come again soon, oh tuneful sage!

The Waretown Rod and Gun Club will hold its annual opening on the 23rd inst. The Commodore of the club, John Westcott, is busy perfecting arrangements so that all who are lucky enough to get an invitation may have a good time. G. C. W.

EXPRESS RATES IN CANADA.

Consul-General Church Howe, of Montreal, calls attention to the following official order governing the express rates in Canada:

All express companies operating in Canada are now subject to the jurisdiction of the board of railway commissioners for Canada. Under the railway act no company shall carry any goods by express until their rates have been submitted to and approved of by the board. All rates, except joint rates of tolls between Canada and points outside of Canada, were filed and approved before the 1st of May. All other rates must be approved before July 1, 1907. As a general investigation of express matters is being held, those interested must file complaints in regard to excessive rates or other grievances they may have with the transportation department of the association at an early date.

"Nothing except the mint can make money without advertising."—GLADSTONE.

Gentlemen:—Kindly discontinue my advertisements of Hanging Baskets as I am way behind on orders.

Respectfully,

F. W. BALL.

Cincinnati, Feb. 18, 1907.

Please discontinue my ads. for now. Will have some more stock to offer and shall be glad to send my ad. to HORTICULTURE.

JOHN STAMM.

Hutchinson, Kan., Mar. 18, 1907.

Please discontinue my geranium ad. I have so many inquiries for plants and I am sold out of the small sizes I advertised.

WM. DOEL.

Pascoag, R. I., April 13, 1907.

Take out the geraniums and salvias from my advertisement. Through this advertisement in HORTICULTURE I have disposed of my surplus stock of both.

R. L. GOINSALVOS.

Waltham, Mass., April 27, 1907.

Would say and glad to say that I am sold out of my pansy stock. Thanking you very kindly for the immense business your paper has alone favored us with,

Yours truly,

WM. DOBBERTIN.

Rochester, N. Y., April 29, 1907.

You will please not repeat our large advertisement of last week, as the goods we offered have all been sold. Over \$500 worth of direct sales from one offer pays us well, as in fact all our advertising in HORTICULTURE does.

A. H. HEWS & CO., Inc.

Cambridge, Mass., April 25, 1907.

"When you pay more for the rent of your business house than for advertising your business, you are pursuing a false policy."—FRANKLIN.

HELP WANTED

HORTICULTURE needs a wide-awake representative in every town in the land. Good commissions paid on advertising and subscriptions. If you are ambitious, write for terms.

WANTED—First class gardener for a commercial house. Must be a good grower of Chrysanthemums, Asparagus, all varieties of ferns, all classes of bedding stock, and a good designer of Floral work. Able to take complete charge of 25,000 ft. glass, and 10 acres of land. Address, stating wages expected, and references, E. A. Butler & Son, Niagara Falls, N. Y.

SITUATIONS WANTED

POSITIONS WANTED for head gardeners and assistants; for further information apply to W. W. Rawson & Co., 5 Union St., Boston, Mass.

FOR SALE

FOR SALE—Greenhouse Pipe

4-in. boiler tubes, second hand, in fine condition, absolutely free from scale and with ends cut square. Sample and prices on application. Kroeschell Bros. Co., 35 Erie St., Chicago.

FOR SALE—45 H. P. Boiler, built two years ago. No reasonable offer refused. A. H. Westbaver, 11 Huntley St., Malden, Mass.

Ludlow, Mass.—Song and game birds are being killed in large numbers in this vicinity, and the deputy game warden has begun a crusade against the offenders. He has asked the fish and game commissioners to appoint another deputy, for he acknowledges he cannot cope alone with this unlawful practice. The birds are killed almost wholly by foreigners, the greatest destruction being on Saturdays and Sundays. There are several thousand Polanders employed in the mills and the majority of them are ignorant of the law. They go hunting on every occasion and not only kill song birds but often destroy their nests. It is believed that a few convictions with heavy fines or jail sentences would put an end to the slaughter.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

Seibrecht & Son, New Rochelle, N. Y.—List of New Rare and Beautiful Plants. An illustrated and descriptive hand-book well filled with desirable novelties and standard greenhouse and conservatory plants.

"Kroeschell Boilers." This is a handsome album just issued by the Kroeschell Bros. Co., of Chicago, Ill. It contains numerous engravings of the popular greenhouse boilers, fittings, etc., manufactured by this company with testimonials as to their efficiency. It will be worth while for everyone contemplating any change or addition to their heating equipment to send to Kroeschell Bros. Co. for a copy.

Luther Burbank, Santa Rosa, Cal.—The New Agricultural-Horticultural Opuntias. This interesting publication gives a complete list of the spineless opuntias, which it pronounces The Fodder Plant for Arid Regions, with directions for culture, etc. It is stated that the best of these improved spineless opuntias when grown under favorable conditions in good cultivated soil in a warm climate may confidently be expected to produce 100 tons of feed per acre each season. The pamphlet contains a number of fine half-tone illustrations.

In ordering goods please add "I saw it in HORTICULTURE."

LOUISVILLE, KY.

Gen. William J. Palmer, the founder of Colorado Springs, is about to present to that city a chain of parks covering 1500 acres. The work of construction was begun in January, 1904, and the natural beauties of the landscape are carefully preserved. Lilacs, snowballs, Russian olives and evergreens of all kinds have been planted. In one spot is a wild garden in which Colorado's native flowering plants and shrubs are planted in groups so that blossoms will be found during the entire season.

AND STILL THEY COME

Last week we presented a letter from a commercial florist, delighted with the work of the Electric Circulator. Here is one from the estate of MR. EUGENE V. R. THAYER of Boston and South Lancaster, Mass., a gentleman recognized as one of the most progressive, up-to-date patrons of horticulture in New England.

COPY

So. Lancaster, Mass., May 15, 1907.

COL. W. W. CASTLE, Boston.

My Dear Sir:—

It is a pleasure to be able to report that during the past very severe winter we have used 73 tons of coal as against 99 tons consumed during the winter of 1904-1905. The saving, as you will see, is about 25% during the most severe and protracted winter we have ever experienced. We compare with an average cold season, that above named, and conclude that your Boiler and Circulator is a mighty good investment for anyone who wishes to improve their heating system.

Yours very sincerely,

(Signed) E. O. ORPET.

P.S.—I endorse all of the above.—E. V. R. THAYER.

Watch this space next week. We shall present some more letters equally convincing.

In the meantime write for particulars of our new

Steel Plate Hot Water Boiler

built especially for greenhouse heating. Piping and fitting done according to most approved methods and satisfaction guaranteed. Perfect circulation in all kinds of weather absolutely assured by the use of our

ELECTRIC CIRCULATOR. ATTEND TO IT NOW.

ORCHIDS

Just to hand a magnificent consignment of 3,000 Cattleya Schroderae, the plants arriving in splendid condition, well leaved and good eyes.

No Orchid lover can afford to be without this beautiful Cattleya, flowering as it does around Easter time.

We question if ever a finer lot has been landed in the States. Our price is very reasonable. Try a case or two.

Usefulness of the Late Tulips

It is very gratifying to note the great interest that has been taken this season in the different species and varieties of tulips. Undoubtedly, the coolness of the season is largely responsible for this great revival. There has been more actual interest this season than has been shown for several decades, not only in this country, but all over Europe.

Tulips have lasted in bloom a long time, giving persons a better chance to know them, and to enjoy their pleasing flowers. With the knowledge we have of the various species and varieties there is no reason why we should not enjoy the tulip season for at least two months each year. Many will agree with me that they give us the most conspicuous and brilliant display of any hardy plants we have in our gardens. Their gaudiness and brilliancy can easily be overdone by planting too large or too many beds. There are many other ways and places besides beds where they can be used to advantage and where their bright colors will be softened and subdued.

The tulip has been in cultivation for a very long time and its history is probably more interesting than that of any other cultivated plant we have in our gardens. We have read and heard about the enormous prices which have been paid for rare orchids, but never has the craze for orchids or any other class of plants reached such a high point of enthusiasm as was demonstrated during the tulip mania in Holland about three centuries ago.

THE TULIP MANIA

In ancient gardening literature there is an account of a public sale in the year 1637 at a place about twenty miles outside of Amsterdam, where one hundred and twenty bulbs were sold at public auction for the enormous price of 90,000 guilders or about \$41,187. One of these bulbs called Admiral of Enchyson, with its offsets was afterwards sold for 5,200 guilders or about \$2,437. Two others called Brabanters were sold for \$1,970. In the middle of the seventeenth century a tulip named Semper Augustus was sold for \$4,600, together with a new carriage and pair of horses with harness, the whole being worth about \$3,000. At another time a bulb supposed to be the same as the last was sold for twelve acres of good land. It is also of interest to note that not only the names and prices of these valuable varieties were set down in the city register, but the weight of each bulb was carefully put down. This craze and speculation went on to such an extent that the government had to step in and put a stop to it. When one reads of the fortunes made and lost with these beautiful plants it is not surprising that we cultivate and love them still.

Now is the time to make notes and to take account of the kinds we admire the most, so that we can procure them for planting next fall. As we said before we can

Tulip Golden Crown.

easily have flowers for at least two months by beginning with the early kinds such as the Duc Van Thols, then intermediate kinds and ending up the season with the late May flowering species and varieties and the Darwins. Nearly every one knows the common early kinds and these notes are written to call attention to the intermediate and late flowering sorts which are not so well known. Also to point out the excellent qualities they possess as cut flowers. Before the peonies come into bloom there are no plants in blossom out of doors that will compare for cutting with the late species and varieties of tulips. They are graceful and handsome and they possess excellent keeping qualities when cut.

THE BEST INTERMEDIATE KINDS

A dozen of the best intermediate kinds would include the following: Artus, scarlet with yellow base; Belle Alliance, scarlet; Chrysolora, yellow; Duchess of Parma, red border with yellow; Cottage Maid, rose pink shaded on white; Keizerskroon, red with yellow border; La Reine, white; Joost Van Vondel, white; Pottebakkers, scarlet, white and yellow; Proserpine, carmine rose; Vermillion Brilliant, scarlet; Thomas Moore, orange.

BIZARRES, BREEDERS, ETC.

In the bizarres, bybloemens, roses and breeders there are many quaint and pleasing colors. There are many persons who cannot recognize the difference between these kinds. The principal reason for this is that they are badly mixed up probably by careless handling. We have a bed each of bizarres, bybloemens, roses and breeders. The roses and breeders all come true but the

bizarres and hybloemens are badly mixed up. The bizarres have yellow grounds shaded with violet or purple; the hybloemens have white grounds painted with rose or cherry red. The breeders are plain colored, called Mother tulips. They make excellent border plants, have very long flower stems and can be had in almost all colors.

THE DARWINS

The Darwins are improved breeders and are exceptionally valuable for their lateness of flowering and very long stems. When the flowers first open the petals are rather short, but in a few days they lengthen out considerably. Some of the varieties have miserable colors while other are exceptionally attractive. Some of the finest varieties are the following: Margaret, rosy pink, with a pale blue base; Glory, early, fiery scarlet; Gustave Dore, rather early, pink; Liberia, early, very dark; Angelina, soft rose; Beatrice, carmine rose; Clara Butt, very fine form, delicate salmon rose; Europe, carmine; La Candeur, white; May Queen, rose and pink; Painted Lady, milky white; Pride of Haarlem is the finest variety of all the Darwins, in my opinion. It has finely formed cerise-scarlet flowers. The Sultan has medium sized flowers of deep velvety black. Another dark variety with finely shaped flowers is Zulu. For a good bright colored early kind there is nothing better than Sieraad Van Flora, color vivid rosy red. There are many more varieties but those mentioned are the cream of the kinds that have been grown this year.

When the Darwin tulips are better known they are sure to become favorites with florists for cut flowers. They last for two weeks when cut. They are very effective as border plants, their tall stems and striking flowers being quite conspicuous.

Robert L. Luman

To be Continued.

Roses Under Glass

AMERICAN BEAUTY

Many of the large growers have, during the past few years, planted a number of houses as early as February in order to maintain a supply of Beauties all the year round. The majority of growers, however, do not possess a sufficient amount of glass to enable them to adopt this practice, and June usually finds them still hesitating.

Planting should now be pushed forward as vigorously as possible, so that the young stock may make some headway before the real hot weather commences. Every day of delay now is curtailing the growing season, cutting off, in fact, the best and most active part of it. Beauties should have a long season of growth to develop a stocky, bushy plant, before putting them into crop, if we desire to have them in good bearing shape by the holiday season, when the demand is good and prices fair.

THE RISKS OF EARLY PLANTING

The fetes, entertainments, etc., attending college commencements often call for large supplies of Beauties and other roses, which is an inducement to defer plant-

ing for a week or two, under the impression that this is a saving method and that by greater care and attention to the younger stock they may be brought to the same stage of development as those which were planted earlier. Late planted Beauties, however, in order to catch up even in appearance with early planted stock, require more attention and coddling and are usually hustled along at such a rapid rate that the growth is too soft and spongy to enter on the winter with a fair chance to set their buds in time for the best and most remunerative market of the season.

ESSENTIALITY OF AIR AND WATER

Too much importance cannot be attached to the proper manipulation of the ventilation. Abrupt changes of temperature should be avoided as much as possible. At the same time, plenty of fresh air day and night, is one of the most important essentials in Beauty growing. If the nights are too cold to admit of this without firing it is a poor system of economy to withhold heat, and this applies not only to the culture of Beauties but to all classes of roses under glass. The Beauty is a rapid grower and a gross feeder. Therefore large supplies of water are necessary to keep the food in an assimilable form. This liberal use of water entails persistent cultivation of the soil to keep it sweet and the surface free from cakeing. This should be continued until the roots approach the surface so closely as to make further cultivation injurious.

INSECTS AND SYRINGING

Although greenfly are not so troublesome during the summer months, a light fumigating once a week will prevent their gaining a foothold and thus make it easier to keep them in subjection during winter. Red-spider is very partial to Beauties, and a few days' neglect on the part of the grower to use the syringe is sufficient for this pest to found a colony. Advantage should be taken of every bright day to syringe the young stock, and during hot spells a second syringing during the afternoon will be of great benefit, helping to cool the house, recharge the air with moisture, and giving to the foliage that firm, rubbery texture so noticeable in well-handled stock. To be effective syringing must be accompanied by a sufficient force of water to dislodge the spider and break up the web under which the eggs are deposited, and be so directed that the under sides of the leaves receive the full force of the spray. In order to accomplish this without injury to the young sappy shoots tying should be strictly attended to.

THRIPS THE WORST PEST

Of all the insect pests that infest roses, thrips, perhaps, do the most damage, and by reason of their small size and wonderful activity are the most difficult to combat. Fumigating with tobacco—in fact tobacco in any form—has little or no effect on them. Hydrocyanic acid gas seems to be the only effective means of destroying this pest. But as there have been some losses in connection with this method of fumigating many growers hesitate to adopt it.

FORMULA FOR HYDROCYANIC

The following formula is perfectly safe and will not injure the plants: Water one pint, commercial sulphuric acid one pint, cyanide of potassium 2 1-2 ounces. This quantity is for every 1,500 cubic feet of atmosphere in the house. The cyanide should be what is known in the chemical trade as "ninety-eight per cent. pure," and can be bought of the local druggist, who should be requested to wrap it in packages of 2 1-2

ounces each in two thicknesses of brown paper, that is one for each jar of water and sulphuric acid.

To determine the amount of space contained in the house ascertain the number of superficial feet there are in the gable end of the house and multiply this by its length which will give the cubic amount. In making the gas use an earthen jar (never metal) large enough to contain all the liquid without slopping over. A gallon jar is a convenient size. Pour the water into the jar, add the acid slowly, and when all is ready start at one end of the house and passing each jar drop in the package of cyanide, and when the last one is dropped get out as quickly as possible, lock the door and allow it to remain thus over night. This precaution is necessary, and it cannot be kept too firmly in mind that hydrocyanic acid gas is very poisonous and might prove fatal to anyone entering the house during treatment.

J. E. Simpson

Stop the Bird Slaughter

The manner in which the equipoise of nature has been broken into through forest devastation, and indiscriminate slaughter in the bird and animal kingdom, the disturbing effects already apparent, together with the more serious conditions sure to follow, unless proper action is taken, was referred to by an editorial in a recent number of this paper. That it struck a note which vibrated among those who occupy an observant and progressive position in horticulture is evidenced by a communication which appeared in a following issue. In an article which came under the writer's notice, a statement taken from a bulletin sent out by the Forest Service was quoted, that this country was consuming between three and four times more wood each year than the combined forests of the United States produce in the meantime. The same paper spoke of an appalling array of figures showing the extent of the sacrifice of bird life for millinery purposes alone.

Mr. Wheeler in his communication calls attention to the extent to which Italian laborers in suburban and outlying districts draw upon bird life for a food supply. That the resources of our country, though vast, are not unlimited is a fact that must be faced in all its bearings, and it is apparent that the time has fully come when future prosperity will depend upon the wisdom of present action.

Legislation and organization are doubtless pertinent means through which desired results may be obtained but the people are not generally awake to the situation. HORTICULTURE, true to its mission as a foremost exponent of all matters bearing upon horticultural interests, has placed itself in the forefront of activity in a movement to bring out the different aspects of this question. The problem is a large one, the issue a vital one. An effort to arouse the trade and people generally to a proper consideration of this matter and to bring forth the possibilities of a proper adjustment of the same, is certainly worthy of hearty support.

Our Winged Friends

Editor HORTICULTURE:—In your issue of May 25 Mr. Wilfrid Wheeler has touched on a subject of vital importance to all lovers of animated nature, sentimentally or, as in this particular, practically. He has thus been aroused to his practical and sensible communication by your editorial in May 18th issue for which now two at least of your readers feel grateful. It especially should appeal to observant and thinking people subjected to the destructive inroads of the pestiferous insects which have abounded in sections of our State for many years. When we think of the magnanimous liberality with which our State has undertaken the suppression of those destructive insects, and the meagre final result, one cannot but sigh with Mr. Wheeler over the wanton destruction of the birds of the forest and field as carried on by irresponsible and thoughtless persons. Compare the cumbersome and crude methods of insect control as at present practised by man, with the swift-pinioned bird having a taste for insect life, and the contrast is apparent.

Two important provisions are essential to induce a larger number of various birds to stay with us all the year round. First, shelter; secondly, forage ground. To provide the first, is to enhance the beauty of the landscape, not to mention the moderating effects on bleak, windswept regions, and the conceded water-conserving influence, by clothing every available bare hill and knoll in the State with evergreen plantations, such as hemlock, spruce, firs and pine.

Forage ground. This can be provided by private estates as well as public means, by planting largely of fruit-bearing trees and shrubs which, in many cases, are also among the most beautiful flowering shrubs. Hawthorns, viburnums, roses, privets, are a few examples.

I was never before impressed to the same extent as I was this last erratic "old-fashioned" winter, with the necessity of looking to the welfare of our much-too-few songbirds. I had a delightful three weeks' visit on my section of the Boston park system in the severest and most dreary part of the winter from a flock of one hundred and fifty to two hundred Alaskan pine grossbeaks, strangers evidently to this latitude except possibly on rare occasions. This is a portly bird of beautiful outline and so tame as to indicate that the pot-hunter has not yet reached its accustomed haunts. They first paid attention to the haws on the thorns, then they took to the ash seed of which there was an abundance, but not a single seed escaped their keen eyes; then they took to the viburnum and privet seeds, etc. On occasions when newly fallen snow was heavy and no litter of any kind was in sight, the self-accommodating and voracious sparrow was also to be seen feeding on privet seeds. This to my mind points eloquently towards, at least, one or two directions in which we may profitably espouse the well-being of our feathered friends.

To retard timber decay

The increasing scarcity and advancing prices of timber for railroad ties, telegraph poles and mining and other works gives an impetus not only to the industry of wood production but to the preservation by chemical process of the wood we now have. Experiments with coal tar creosote are being conducted by government experts and it is believed possible to so retard decay that the life of timber will be trebled in length. The greenhouse industry is a very insignificant item in the sum total of the interests which will profit by the perfecting of the wood-preserving art but, to those engaged in it, any process that will treble the life of a

greenhouse structure in any of its parts will be a most welcome boon.

To restore Bermuda's lily prestige

Professor S. W. Collett who has been conducting an investigation of the Bermuda lily disease is reported to have come to the conclusion that self-sterility due to a constitutional weakness probably caused by inbreeding is the cause of the trouble and that in cross-fertilizing with pollen from other types will be found the remedy. Seedlings resulting from a cross with giganteum are said to be growing well and are expected to produce something valuable. We hope these and other investigations now under way may prove profitable and hope to see the Bermuda lily bulb industry resume its old-time importance. Nothing will bring out the possibilities in any industry as competition does. We believe in it for railroads, trade papers and a good many other things, including the production of lily bulbs. Other sources of supply will "begin to sit up and take notice" when it becomes apparent that Bermuda, Washington, Texas or any other district is cutting into their trade with superior material.

Pointing the way for the commercial florist

The series of articles from the pen of Robert Cameron, the accomplished gardener at Harvard Botanic Garden on hardy bulbs and border plants, now being presented in HORTICULTURE, should be carefully perused by every florist, seedsman and bulb dealer. Mr. Cameron has a lively apprehension of the practical side of commercial horticulture, which is rare among those usually occupying similar positions and he gives from the store of knowledge which it has been his ambition to lay up, with a freedom and enthusiasm which cannot be too highly appreciated. More varieties are the demand of the times and the greatest measure of success and prestige will come to those florists who are progressive enough in spirit and zeal to follow up where men of Mr. Cameron's calibre and foresight point the way. If every bulb dealer could impress upon his customers the facts presented in our last week's issue regarding the use of tulips and daffodils in the border the sales of tulips and daffodils would be increased many fold.

Get ready for Philadelphia

Echoes of bustling activity in and about Horticultural Hall, Philadelphia reach our ears. Busy officials and industrious committees are pushing along the work of preparation with an ardor which plainly indicates that the prediction of a record-breaking convention in August is about to be verified so far as Philadelphia can contribute to bring it about. There remains now only about eight weeks until the opening day and those who plan to participate in this notable event should get busy at once. "First come, first served" applies to hotel accommodations, to exhibition space and to other matters of business or comfort. We hardly need to repeat that no one engaged in any horticultural pursuit or allied profession can afford, as a business proposition, to absent himself from this great gathering of his brother florists and gardeners. In all the proceedings, the exhibition and the social features of the convention the visitor will find himself in contact with the best achievements and the brightest minds in the horticulture of today. He who fails to realize this fact and to act upon it does himself an injury and places his business and future prosperity at a distinct disadvantage as compared with his competitors who are wiser in their ways.

AFTER ADJOURNMENT.

It is quite nice to learn through the columns of our contemporaries of the many happy florists who, one after the other, are wont to display in public their exuberant joy over certain interesting events in their families. But we should really like to see a greater variety in the methods of celebrating these "arrivals." "Passing the cigars" is getting threadbare and, besides, discriminates against the non-smoker. "Wearing a broad smile" is fully as acceptable to those who do not smoke and has the merit of being very inexpensive, but has likewise become wearisome. Can't some sympathetic soul put up a prize for a new way of telling the old, old story?

A very interesting discussion has been going on in one of the English journals concerning the status of the "private" gardener, the qualifications that will serve him best in his relations with his employer, and as to how far he can be held responsible for the breaches of good taste sometimes displayed in the lay out and planting of grounds under his care. To many of our old-world fellow-craftsmen no doubt the word "employer" is synonymous with "master," consequently as one writer puts it "if he is asked (in effect) for the moon, he must be prepared with a substitute," and the idea of giving advice based upon his own knowledge and experience would never be entertained. In individual cases and, in this country, more frequently probably, the reverse may be true yet it is a fact that the gardener in the majority of cases is looked upon as, and tacitly submits to, ranking in the "servant" class. All honor to those who have upheld the dignity of their profession and have been able to exact from their employer a respect and deference to their better knowledge of their art. We hope to see more of them for it is our belief that in many cases the gardener's judgment is superior to that of his employer in the planting and horticultural development of an estate. If this fact was more generally recognized many of the offences against good sense and artistic taste which we see, here and there, would soon disappear.

THE DISTINCTION BETWEEN ROSE CUTTINGS AND PLANTS.

Over a difference of \$1 the United States Court of Appeals will be called upon to review a case arising from a bundle of rose cuttings. It is claimed the American Express Company brought from Brampton, Ont., a shipment of rose cuttings and delivered them at Oneonta, N. Y. The Collector of Customs here charged a duty of 2 1/2 cents each. This duty was objected to on the ground that rose cuttings should not be taxed.

Later the general appraiser reversed the collector's decision and put them in a class calling for ad valorem duty of 25 per cent. Then followed an appeal to Judge Hazel in the United States Court. Judge Hazel affirmed the decision of the general appraiser. This raised the duty on the rose cuttings from \$2.13 to \$3.13.

It is not the amount of money the United States Attorney is after so much as the principle and rulings involved.—Buffalo Examiner.

NEW PLANTS.

Tropaeolum hybridum Darmstadt introduced by a European firm is described as a double flower of intense red-orange shade, especially adapted for window-box use on account of its vigor and floriferousness.

Three dahlias designated as "Decorative Show," have been introduced by a German firm as novelties of 1907. They are Grenadier light orange-pink, Matador carmine, Die Unschuld creamy white.

A new violet, called Hesse's Improved Kaiser Friedrich, is said to excel all others in size of bloom and to have a much longer flowering season than Princess of Wales.

Frau Cecile Walter, a new Polyantha rose by P. Lambert, is well spoken of by foreign horticultural journals. Its color, light yellow, with reddish yellow stamens, is one of its recommendations.

THE BEST LILACS.

Single varieties with fragrant flowers—Mathieu de Dombasle, lilac color inclined to blue, very large inflorescences; Charles X., dark red; La Tour d'Auvergne, dark lilac; Mme. Kreuter, red, very fine; Toussaint Louverture, very dark red; Marie Legraye, white, fine truss; Philemon, dark, first-rate variety; Souv. de Louis Spath, rich red, very fine trusses; Mdle. Fernande Viger, white, Camille de Rohan, dark red; rubra de Marly, pale lilac; Dephine, very dark bluish purple; Iovaniensis, pale flesh. Double-flowered fragrant varieties—Senateur Voland, lilac; Alphonse Lavallee, white; Mme. Abel Chatenay, white; Mme. Jules Finger, lilac; Marie Lemoine, white; Francois Morel, lilac; Monument Carnot, lilac. Good varieties in which the fragrance is not so well defined are—Alba grandiflora, single white; Tournefort, lilac; Duc d'Orleans, bluish blue, large truss; Ville de Troyes, rich red; Compacta, single white.—Journal of Horticulture.

SHRUB AND TREE CHAT.

Clematis Sanderi, an evergreen with the habit of *C. indivisa*, is in bloom at Sander's, St. Albans, England. The plant was brought from Australia three years ago. The flowers, which are white, with salmon red stamens and fragrant, are produced freely in clusters of a dozen or more.

Observations of the effect of factory smoke on conifers conducted by the Royal Horticultural Director in Berlin show that the trees that have best withstood the unfavorable conditions are *Abies numidica*, *A. balsamæ* and *Araucaria imbricata*.

CORRECTIONS.

A few errors, typographical and otherwise, crept into last week's issue of HORTICULTURE. In the article by Mr. Cameron, on page 778, "Crimson snowdrop" should be Crimean snowdrop and, on the following page, *Viola cornuta* "Administration" should be Admiration. Two articles on "bird slaughter" topics intended to appear last week and referred to on the editorial page, were inadvertently omitted. Our readers will find them both in this issue.

WHOLESOME CHESTNUTS.

Now that the rush of spring sales and planting is about over, give attention as much as possible to the growth and thorough development of all kinds of stock for fall, winter and spring use. Cultivate the soil wherein violets are planted; do the same with carnation ground. Do not wait for the appearance of weeds which do not injure the plants half as much as a hard, crusty surface on the soil. Keep the hoes and cultivators going continually. Remember that over-production is not as much the cause of poor returns as poorly grown stock.

Antirrhinums are common when grown in a common sort of way, but when they are produced with spikes a yard long the commonness is not much in evidence. Take cuttings now of good kinds and root them, keeping them growing right along; or if you want to risk growing the plants that are in flats now from seed sown in the spring put up as many as are required. It will also do to lift plants that have been planted out in the open some time, but lift them early to insure success.

Well grown primulas and cinerarias bring a fairly remunerative price to the grower, but small, poorly-grown plants are simply examples of wasted time and room.

Chrysanthemums will now require a great deal of time and constant care; the planting of those varieties that are intended for the main crop should be prosecuted with as little delay as possible. It is a well-known fact that once chrysanthemums get pot-bound they then and there suffer irretrievably. They require to be kept growing with fresh material for the roots to enter into. Pot plants of chrysanthemums well grown in every respect are usually fairly profitable.

Begonia Lorraine, poinsettias and cyclamens are three of the best selling plants. Look well after them all regularly and you will find it much easier than the spasmodic treatment.

Procrastination is an evil more in evidence and more disastrous in its consequences in horticulture than in most other callings.

Hybrid Perpetual roses growing outdoors will be later than usual in coming in to bloom this year. Roses respond very generously to good treatment when they are rapidly making growth, and from that stage on to the full swelling of the buds. Manure water helps them wonderfully. Give them a liberal quantity and immediately afterward allow clean water to run on the soil at the roots. Water roses in the late afternoon or early morning.

Many a gardener's success with fruit has been the means of his ultimate pronounced permanent good standing as a craftsman. Grapes are always or nearly always favorite objects of comment, appreciative or the reverse. Large bunches are ornamental, but it is the size of the berry, its color and the flavor that make the greatest impression on the consumer.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

The exhibition of June 15 and 16 at Horticultural Hall, Boston, was a most interesting and radiant array of rhododendrons, irises, aquilegias, tree peonies, pyrethrums and herbaceous border flowers which almost completely filled the large exhibition hall. Rhododendrons were shown in large numbers by Walter Hunnewell, Mrs.

J. L. Gardner and Mrs. R. A. Leason. The trusses seemed less luxuriant than usual, the result of the rigorous winter and spring undoubtedly. There were several long tables of irises and they made a beautiful scene. The largest exhibitors were Wm. Whitman, R. & J. Farquhar & Co., Blue Hill Nurseries, Mrs. Gardner and T. C. Thurlow. Iris Germanica Purple King in the Farquhar collection was especially admired. Farquhar's table of Columbines comprised an almost limitless variety of form and tint and the interest being taken in this flower as a candidate for the honor of "National Flower" was evidenced by the large number of inquisitive visitors who crowded about the display.

Again the superb seedling tree peonies from Charles Sander, gardener for Prof. C. S. Sargent, attracted the admiration of every one; they were simply glorious. Mrs. D. S. Greenough, Jr., also showed a group, among the number being several flowers of a dazzling white and enormous size; such superb blooms have never been shown here before. James McKissock was another exhibitor in this class. The general collections of hardy herbaceous flowers contributed by Blue Hill Nurseries, R. & J. Farquhar & Co., and F. J. Rea made a gorgeous display. The late-flowering tulips in the Farquhar collection were very effective; Mr. Rea's collection, as usual contained many new and rare varieties. Mrs. Gardner contributed a handsome table of orchids and stove plants. Seedling pyrethrums from Blue Hill Nurseries, seedling Cereus Eyresii in bloom, from Harvard Botanic Garden, Bechtel's double-flowering Crab, from the Boston Park Department and a promiscuous display from Mrs. E. M. Gill should also be mentioned as attractive features of the exhibition.

LENOX HORTICULTURAL SOCIETY

The regular meeting of the above society was held June 15. The effect of lowering the initiation fee has been to induce seven young men to become members. Owing to the late spring it was unanimously voted to abandon the June exhibition. At our previous meeting the following questions had been asked and were well discussed: How do plants take up food—in solid or liquid form? What is capillary action, especially in relation to soils? Is nitrate of soda a plant food or merely a stimulant? What is its special action on plant growth? Is lime of any benefit to the soil at all, or is lime of any benefit to the soil in any locality? G. H. I.

ST. LOUIS FLORIST CLUB.

Twenty-two in number attended a harmonious and very interesting meeting on last Thursday afternoon. President Irish was on hand early and opened the meeting at 2 o'clock with all the officers in attendance. The president called upon the trustees for their report. Chairman W. C. Smith responded, stating that they had all arrangements completed for June 29 in Hibernian Hall, and that every member would receive an invitation. Also that the annual outing would be held at Romona Park on Thursday, July 25th. William C. Young, State vice-president of the S. R. F. reported that he had not yet completed arrangements for the trip to Philadelphia, the railroad rate being at the present time \$34.55 for a 60 day trip which included a visit to the Jamestown Exposition. He urged the members to send in their names as soon as possible, and hoped that by next meeting he would be able to report a much lower rate.

A discussion of fumigation and fourteen other topics taken from the question box ensued, John Steidle, J. F. Ammann, W. C. Young, H. C. Irish, G. Fulgraf and F. Fillmore taking part and making things very interesting. President Irish and Secretary Beneke hope for a large attendance at the July meeting as the nomination of officers will take place, also other important matters pertaining to the S. A. F. meeting.

ST. LOUIS HORTICULTURAL SOCIETY.

The executive board of this society is holding weekly meets regarding their fall flower show. The members have subscribed nearly all of the \$1000 subscription to the new Coliseum in which they expect to hold their show, but it is hardly possible that the big enterprise can be ready before the first of the year. Should the building be ready and the show get the opening date it should be a great success.

ENGELMANN BOTANICAL CLUB.

The Engelmann Botanical Club of St. Louis held their meeting the past week in the Central High School with a good attendance and concluded not to hold any meetings during the months of July, August and September. The club intended to hold a spring flower show, but owing to the backward season, it was thought best to wait until next spring. This is the first spring that the club has failed to hold a spring show.

PASADENA GARDENERS' ASSOCIATION.

The regular meeting of the association was held on June 7. After the routine of business the members were addressed by C. A. Day, Horticultural Inspector, on Entomology. He spoke of the evils of neglect in regard to scale and all garden and greenhouse pests, and of the carefulness required in shipping clean plants. This was one of the most enthusiastic meetings ever held. This association is looked upon as a leading spirit in the line of horticulture. A vote of thanks was tendered to Mr. Day at the close.

MORRIS CO. (N. J.) GARDENERS' AND FLORISTS' SOCIETY.

The facts that our society holds no monthly meetings in July and August, and that Robert Tyson was to read an essay on "Melons under Glass," was responsible for the very large attendance at the June meeting. Our monthly exhibit included 12 varieties of German iris from Florham Farms, who also sent a fine basket of lettuce Little Gem and samples of indoor-grown melons Royal Jubilee and Sutton's Ringleader—enough to give us all a good taste which was thoroughly enjoyed. Robert Tyson, the grower, brought them along to illustrate his essay. John Heeremans had 1 vases of new sweet peas Alfred Watkin, Nora Unwin, Frank Dolby and Fairy, and a fine dish of new tomato Dwarf Stone. A. Herrington, secured certificate of merit for his collection of iris and his melons. John Heeremans got a certificate of merit for his sweet peas and a cultural certificate for his tomato. President Vince is absent on his European trip.

Our fall show will be held in Madison, Oct. 1st, and Nov. 1st next. Robert D. Foote of Morristown offers a first prize of \$50 for 25 chrysanthemum blooms in 25 varieties, short stems. There is no string on this prize, and we hope to have a strong competition, from outside as well as from members of the club. Otto H. Kahn offers a prize of a silver cup for best 6 white and best 6 pink chrysanthemums, confined to members of the society. Something like \$500 are offered in cash prizes. Schedule is ready for the printer.

James Fraser, superintendent to O. H. Kahn had staged at the June meeting his set of new fancy coleus Lucania, Daisy, Mohawk, Red Boy, Wonder and Combination. He secured a certificate of merit for the set and so well are they thought of that his friends have induced him to disseminate them in 1908 through C. H. Totty.

E. REAGAN.

GARDENERS' AND FLORISTS' CLUB OF BOSTON.

About 125 members were present at the meeting on Tuesday night, June 18, to listen to the able address on "The Chrysanthemum," which will be found on another page of this paper, by that eminent chrysanthemum expert, Chas. H. Totty. The discussion following the reading of the paper was lively and brought out some very interesting and practical information. There were a few interesting things on exhibition, including two pans of dwarf yellow chrysanthemums in flower from T. D. Hatfield, Iris Germanica Her Majesty from F. J. Rea, pyrethrums from James Wheeler, and oriental poppies from Mt. Auburn Cemetery. It was announced that the annual picnic would take place on July 25 at Dorchester Park. The proposition that the club contribute some feature for the trades parade during Old Home Week in Boston was discussed at some length, but not finally settled. Eight new names were submitted and elected for membership.

AMERICAN ASSOCIATION OF NURSERYMEN.

The nurserymen's convention held at the Hotel Cadillac last week was very inspiring from the fact that all of the four hundred and odd attendants were there strictly for business. Many new points were brought out during the discussion of a number of interesting well written papers.

A very notable feature was the suggestion of Mr. Albertson attached to his report on freight matters and shipping, setting forth the advisability of the smaller shippers combining their shipments with those of larger shippers, thereby taking part of the benefit accruing from rates as they are on car-load lots or more. Action on these lines should be an especial inducement to the growth of the society, not only in numbers, but in influence because of its direct usefulness to its individual members. There was a lengthy discussion on the result of interrogations and petitions for better railroad rates, etc. The desire to secure a cheap rate seems to have outweighed the most important necessity of getting speedy delivery. It might have worked a much greater advantage to have procured assurances for speedy delivery first and then go for cheaper rating afterwards.

Although the weather was anything but good Park Commissioner Breitmeyer entertained the members of the convention on Belle Isle, Wednesday afternoon and evening.

The next convention will be held in Milwaukee. At a meeting held on Wednesday afternoon the vice-presidents of the association had selected Atlantic City for the 1908 season, and so recommended to the convention. When the matter was put to a vote, however, the Wisconsin city won over the Atlantic coast resort by a large majority. The western delegates made a strenuous objection to Atlantic City on the ground that it is not so situated as to be accessible to nurserymen from all parts of the country.

The following officers were chosen for the ensuing year: President, J. W. Hill, Des Moines, Ia.; vice-president, C. M. Hobbs, Bridgeport, Ind.; secretary, George C. Seager, Rochester, N. Y.; treasurer, Charles L. Yates, Rochester, N. Y.; executive committee, J. H. Dayton, Painesville, O.; E. M. Sherman, Charles City, Ia.; H. B. Chase, Huntsville, Ala.

Interesting papers and spirited discussions on various topics made up Thursday afternoon's program. The extremely inclement weather somewhat interfered with the social side of the meeting, but did not serve in any way to dampen the ardor of those who took part in the debates nor of the "boomers" for the several cities that were endeavoring to land the next convention.

COLUMBUS FLORISTS' CLUB.

The annual Rose and Strawberry show took place in the Brent building headquarters, June 11th. The display of both roses and strawberries was the best ever made by the club. Space forbids a detailed account of all the roses exhibited, but suffice it to say that all the popular indoor varieties

were well represented; as regards hardy stock there was none exhibited, the season being so backward. Messrs. Jacob Reichert, Gustave Ackerman, and Albert Hills, awarded the rose prizes as follows: First to James McKellar for Uncle John; second to L. L. Siebert for Golden Gate, and third to Sherman F. Stephens for Bride. Besides the prize awards, the general displays of Graff Brothers, Clover Hill Nurseries, and Fifth Avenue Floral Company, were greatly admired. The strawberries as a whole were very fine; there were more than twenty-five competitors for the awards, which resulted as follows: First prize to William F. Metzmaier, second to John Brust, and third to George Bauman. In fact, so excellent were all the strawberries that the committee, consisting of Messrs. William F. Metzmaier, A. Wedemeyer, and John Williams had a hard time making the awards. After a short business meeting, the evening was given up to social intercourse. A fine collation was served, so arranged that everyone had a chance to sample the prize strawberries. Then music and games filled in the evening until a very late hour. W. A. Sperling, representing Stunpp & Walter Co. was a guest, and during the evening kindly acted as judge of the various games.

THE ANNANDALE ROSE SHOW.

The fifteenth exhibition of the Annandale Rose Show was given at Annandale, N. Y., June 12th and 13th. Considering the very late season and no exhibits in the rose classes the show was a decided success. The exhibits of herbaceous flowers, while not as great in variety as they would be later in the season, were very fine. The first prize for best group of plants was won by Geraldyn Redmond, Thomas Ranger, gardener; second prize by T. T. Astor, gardener, Horace A. Deal; while the group exhibited by Hon. L. P. Morton, Thomas Talbot, gardener, was superior to any in the point of variety and tasteful arrangement.

In class for best twelve ferns Geraldyn Redmond was first and T. T. Astor second. In specimen fern J. J. Astor was first and Hon. L. P. Morton second. In the class for herbaceous flowers Mr. Archibald Rogers, Thos. P. Connor, gardener, was first and Hon. L. P. Morton second, while several exhibits not for competition were equal to the prize winners, notably those of Miss Cruger, Cruger's Island, and Mrs. Rachael Aldrich, Barrytown.

An object of much comment and interest was a group of Azalea Mollis and ferns with a background of evergreens, exhibited by the Shatemuc Nurseries, Barrytown. J. T. Lynch, Poughkeepsie, exhibited a vase of Beauty roses; J. J. Astor a vase of Beauty and two of Richmond; these and two vases of Killarney cover the rose display, no out-door roses being in bloom. In the vegetable class Mr. Archibald Rogers was first with a very attractive collection. Mr. Douglas Merritt also exhibited a very nice collection not for competition.

Taking the exhibition as a whole, it was a credit to the exhibitors and to the society, in spite of the unfavorable season. The judges were R. W. Allen,

Hudson, N. Y.; F. L. Atkins, Rutherford, N. J.; James Blair, Statensburg, N. Y.

JOHN W. BAIN, Secretary,
Red Hook, N. Y.

CLUB AND SOCIETY NOTES.

The Newport Horticultural Society's rose show has been postponed until July 9 and 10.

The Lake Forest Horticultural Society, Chicago, will hold its first annual exhibition on July 13.

The annual picnic of the Indiana State Florists' Association will be held on invitation at the country place of R. F. and J. E. Harritt, Indianapolis, on Wednesday, June 26, Stop 4, Rushville Traction Line.

MARYLAND STRAWBERRIES AT JAMESTOWN EXHIBITION.

Maryland strawberries are the centre of attraction in the States Exhibit Palace at the Jamestown Exposition. Maryland, which leads the Union in growing strawberries, is demonstrating to the thousands of people now visiting the Exposition her ability in this direction. The varieties Taft, Longworth and Outlander, seedlings originated by Arthur T. Goldsborough of Wesley Heights, are the largest and finest berries in the exhibit; all of them vary from five to eight inches in circumference and weigh from two to four ounces. The Gandy berries exhibited by J. Aikenhead of Easton, are also exceptionally fine, a few being as large as the preceding varieties. Other Marylanders who are aiding in the strawberry exhibit are D. H. Hargett of Frederick, F. E. Matthews of Pocomoke and A. T. Whittington of Marion Station. On the tables are also several large vases of peonies from George Morrison of Baltimore. Prof. T. B. Symons, in charge of the Maryland exhibit, is kept busy giving information regarding the great horticultural possibilities of the State.

BLOCKED BY THE EXPRESS COMPANIES.

The main objection to a parcels post, although usually carefully concealed by the politicians, is the fact that it would seriously impair the profits of the express companies, if it did not drive them out of business. For 30 years Congress has refused to consider seriously the re-establishment of the parcels post, and it is not likely that Postmaster-General Meyer will make more headway than his well-disposed predecessors made. In the mean time the express companies will exist and their promoters will continue to make immense fortunes by charging big prices for the transportation of packages which the government should carry, as it does in other countries, as mail at small charges.—*St. Joseph News Press.*

PERSONAL.

Visitors in Boston this week: C. H. Totty, Madison, N. J.; Jos. S. Fenrich and Harry J. Hoffmeir, New York; A. M. Rennie, Providence, R. I.; E. H. Chamberlain, New Bedford, Mass.; E. J. Harmon, Portland, Me.

The Chrysanthemum—Its Past, Present and Future

A paper read before the Gardeners' and Florists' Club of Boston, by Charles H. Totty.

The Chrysanthemum in its various forms as grown today is essentially modern in its varieties, and it is a far cry from the first Japanese introductions of R. Fortune in 1862 to the large flowered Japanese of today. No flower has proved so responsive to the efforts of the hybridist and the present day types of Europe and America are far ahead of the kinds grown at this time in Japan, so far as my knowledge of Japanese varieties goes. When we stop to reflect on the progress made in a period of some fifty years with this flower, one hesitates to hazard a guess as to what the future has in store. The past history of the Chrysanthemum is interesting. A Chrysanthemum show was held in Birmingham, England, as far back as 1836, but no record of it is left saving the mere detail of time and place. The organization that was to be the real factor in developing the Chrysanthemum was organized in Stoke Newington, England, in 1846 at an old-fashioned hostelry where a company of congenial spirits used to congregate evenings and over their pipes and beer discuss their favorite flower.

That little society prospered in its chrysalis state and eventually evolved into the National Chrysanthemum Society and this society by its system of historical records, classifications and nomenclature put Chrysanthemum where it is today.

The first seedling raised in cultivation was flowered in France about 1827 and I have no doubt the raiser was just as proud of his achievement as we would be today to produce a Beatrice May or William Duckham.

The pompon section was produced from a small semi-double variety sent home by Robert Fortune from China in 1842. We are indebted to the French raisers for this type who christened it pompon from the real or fancied resemblance to the tuft or pompon on the French soldiers' hats of that period. The Fortune introductions of 1862 gave the greatest impetus to the cultivation of the Chrysanthemum and they were the ancestors of our present large flowering kinds.

Some of the Pioneers.

Glancing hurriedly through the American history of the Chrysanthemum we find that the first seedlings were exhibited before the Massachusetts Horticultural Society in 1879 by Dr. H. P. Walcott, so that Boston in this as in many others matters historical may rightly claim first honors. Peter Henderson previous to this had imported from Japan in 1863 some fine varieties one of which at least, Grandiflorum, was grown until very recently. The Chrysanthemum Society of America was not organized until 1889, but shows had been held for some time previous to that in the larger eastern cities. Possibly the greatest enthusiast this country ever had is the veteran John Thorpe. I had a short talk with him in Chicago last fall and I know he is a mine of information on the early struggles to popularize the 'Mum in this country. Another gentleman who while his name does not figure so much in print did a great work in the

early days, is Wm. Barr of Orange; he too is brimful of early history and furthermore is just as keen today in testing new kinds as he ever was. What wonderful power of fascination does the 'Mum possess that it can hold a man's interest for a life time compelling him willy, nilly, to remain its slave and worshipper?

In the early 80's several Pennsylvania growers came to the front. W. K. Harris and H. Waterer left their imprint on the 'Mum by raising some fine varieties. New Jersey was represented by Mr. T. H. Spaulding and the late lamented firm of Pitcher and Manda. It is impossible in a paper of this description to enumerate all of the men who did yeoman service in the past, but at least two others, Fewkes and Hallock, are deserving of special mention. Getting down to the present time we find that the Australian varieties in the past few years have swept our exhibition tables clear of the older varieties giving us flowers of such splendid size and colors combined with ideal habit that there would almost seem to be an infusion of new blood into the race. The English and French seedlings are in too many cases disappointing to us, comparatively few standing the test of our climate, but the failures in the Australian kinds are few. The reason for this is because the Australian climate at flowering time is similar to ours, often running warm and bright, and if a seedling shows a large, full, perfect flower in this condition it will do the same with us. An English variety may be splendid in its native home and yet be a failure here, showing an enormous eye and only some five or six rows of petals. Some of their very finest kinds act in this way here, Lady Conyers, Elsie Fulton and Mrs. F. W. Valis being good examples. The Australian kinds on the other hand show up much better than they do in Europe, many of them, the sunlight here in the early fall serving to bring out the size and breadth of the petal to greater advantage. I am often asked how it is that the Australian types are such strong growers, splendid in both stem and foliage. Perhaps the chief reason is because in Australia they practice an outdoor system of culture entirely in the section from where we have received the finest varieties.

Future Development.

We should never lose sight of the fact that the Chrysanthemum is almost a hardy plant and indoor culture is an unnatural condition which in time tends to degenerate the parent stock. The future will possibly see a race of American seedlings equal or superior to what we are now getting from Australia, but they will be raised outside in the great Southwest somewhere, where the hand of man has merely to guide nature in an intelligent systematic crossing, not here in the east where with glass houses and artificial heat man must not only guide nature but also finish her product for her. Another reason why the Australian kinds are all good growers, lies in the fact that a rigid selection is kept up all the time from the first

seed bed to the flowering stage. Any kind that shows an exceptionally tall, or a weak spindly habit is destroyed before the plant reaches the flowering stage so that the temptation to keep it, should it prove to be an exceptionally fine flower, is removed. This I am informed is the policy of Mr. Pockett of the Wells-Pockett firm, and I say today that this firm if they do not send us another variety, have left a mark on American Chrysanthemum culture that will endure for many years to come. The most popular type of flower at the present day is the Japanese incurved. This combines the largest size with the incurving petals so much sought after by the commercial grower on account of its shipping qualities.

The true Chinese type with its incurving petal is apparently too small for present day use, and is entirely crowded out of the exhibition table saving in classes specially reserved for it, and to a considerable extent, it is also getting crowded out of the commercial grower's list. This perhaps is in some ways to be regretted, yet it is only one of the cycles of change that have served to keep alive the interest in the "Mum." Every few years a new type or color appears and revivifies an interest that perhaps was waning and needed just that stimulus.

The Banner Year for Exhibitions.

Some good and worthy people every once in a while tell you that the Chrysanthemum is getting played out, that it don't sell as well as it used to in the market, people are tired of it and so forth. Let us look at the facts and see if this is so. What do we find from an exhibition standpoint? We find every year an increased number of cities holding "Mum" shows. We note 20 or more local societies each in a flourishing condition and holding an annual fall show, when ten years ago not one was in existence. No signs of lack of interest there. If you were in my position as a disseminator of new varieties and knew as I know men who buy the plants out of their own pockets, in cases where the employer is not sufficiently interested to do so, in order not to be behind at show time, you would never talk about lack of interest. I have seen several schedules for the coming fall, and in every case the prizes are larger and far more numerous, and I will go on record as saying now that 1907 will be the banner year to date from the viewpoint of exhibitions. What about it commercially? That can only be conjecture till we can get an idea of the quantities planted in the different sections, but last year was the best year for prices that I have known since I have studied the flower market. Climatic conditions I will concede helped somewhat to bring about this condition, but even so, people look for Chrysanthemums now more than they once did in the early fall, and I see no reason to feel pessimistic as to the future commercially of the flower.

The Chrysanthemum a Stimulus to Fall Trade.

The Chrysanthemum accomplishes every year a great work in bringing the general grower and his wares be-

fore the public at the fall shows. How many towns ever attempt even to hold a show only in the fall, when the "Mums" are at their height? Spring and summer exhibitions can be counted on the fingers of one hand, almost in the entire country, but when the fall comes, shows spring up from one end of the country to the other, and though the Chrysanthemum is the principal attraction it affords the Rose men, the Carnation men and the new plant men a chance to exhibit their stock to a large section of the flower buying public that could otherwise only be reached through the medium of the retail store. The average retailer is more interested in keeping his trade down to the staples in the trade than he is in pushing a lot of new things that he will have to sink his money into and run his chances on selling them afterwards to a fickle minded public. As an aid to instructing the public and giving an impetus to the fall trade just at that time opening up, the Chrysanthemum performs a service to the florist that cannot be measured in actual dollars and cents. One of the most encouraging features to me in the Chrysanthemum business is the increasing number of exhibitors. True, some of the older ones drop out from one cause or other, but this is only to be expected, and the number of new men coming up is very greatly in excess of older men going out.

Usefulness of the Chrysanthemum Society.

The various local societies have helped to bring about this condition, and I pray it may continue, for when the local interest dies and the local show is discontinued, then do we see the horticultural interest in that particular section, so far as the Chrysanthemum is concerned, fading away. While I give place to none in my interest and loyalty to my local society, I believe it is the duty of every Chrysanthemum lover to affiliate himself with the National Chrysanthemum Society also. In union there is strength, and I would like to see the Chrysanthemum Society with thousands of members where it now has hundreds only, for gentlemen members of this society should not forget that the present head of the Chrysanthemum Society is a Massachusetts man, Mr. Loveless of Lenox, and as a matter of State pride I know you will help him all you can. To a grower interested in Chrysanthemums the lists of varieties issued by the society are worth much more than the annual dues amount to, not to mention the good work it does in recognizing new and meritorious varieties, winnowing the wheat from the chaff and occasionally in detecting old varieties that once in a while, whether by accident or design, are re-named and offered to the trade as new varieties. And now what of the future? I am neither a prophet nor the son of a prophet, and when dealing in futures it is the unexpected that always happens. So far as one can see along the pathway at this time the future is bright—very bright for the Chrysanthemum. Changes will come unquestionably. In fact, they are already looming up. I see it in a reaction in some sections from the large blooms solely. The past year has witnessed to me a remarkable turn in fa-

The rose which we here illustrate is one of M. H. Walsh's finest productions. It is a Wichuraiana hybrid of vigorous growth, hardy and with handsome glossy foliage. The flower is unique; color, base of petals, creamy white, tips of petals carmine, the centre filled with golden stamens. The petals reflex in a remarkable manner giving the flower a star-shaped form which no other rose presents. The petals are very persistent, lasting fully four weeks from the time of opening until they begin to drop. The plant shown in the illustration is one of the group exhibited at Washington last March and the flowers had begun to open three weeks before it was shipped, yet it arrived back in Woods' Hole without losing a petal, Mr. Walsh tells us. That such a rose, with its

RAMBLER ROSE PARADISE.

freedom of blooming is destined to hold high rank as a florists' Easter plant seems inevitable.

vor of the single flowered types. The singles cannot be called new, for I recall we made an unsuccessful effort to have the market take them up ten years ago and the market laughed at them. True, varieties have improved greatly since then, but the market at that time was not in a receptive mood. It was merely a big flower, the bigger the better, with a stem like wire and foliage hugging the flower. Today it would seem that the artistic taste is more developed. We see it in the increasing popularity of single flowers not only in Chrysanthemum, but also in roses, dahlias and other flowers. Light, graceful, natural effects can be produced, impossible of duplication with the heavy double flowers that have been the florists' ideal for so long. The single varieties now seem to be coming into their own after years of neglect, and the next year or two will see them popular. I notice that several new singles were awarded certificates in London last fall. Such a thing would have been heresy not so long ago, and I regard it as an indication of the trend of the times. The pompons or hardy types too will be planted much more largely in the next few years. With the spread of the civic improvement ideas of a city beautiful instead of an aggregation of bricks and stones, demand will come for these humble but welcome flowers, blooming as they do when everything else is gone, and pointing an object-lesson of hopefulness long after every other flower has succumbed to the rigors of early winter.

Will the Big Flowers Stay?

Will the big flowers stay? I say yes. For large, massive decorations they are unsurpassed; to make a showing in an exhibition they are in-

dispensable, and as evidences of cultural skill they tell their own story. That new types will crop up and have a share of the popularity is certain. The human mind from earliest history is perpetually craving for something different, and in this respect modern civilization differs not one whit from the ancient Greeks and Romans. The large flower in its proper place has a certain nobility about it that is not to my mind approached in any other flower, but its place is not stuck in a low bowl to form part of a dinner table decoration. That part of decorative art can be more artistically done with singles or pompons or other smaller flowered varieties.

That the hybridist will continue to breed to larger and larger types is certain, but size and coarseness do not necessarily have to go together. We have seen the coarseness of Timothy Eaton, for instance, eliminated, and a flower equally large or larger produced in Beatrice May or Mrs. D. V. West without a trace of coarseness in their makeup, and it is on these lines that the hybridist will work.

Some people in decrying size go to the other extreme and condemn a flower for its size alone. I say this is wrong. The forest tree when a magnificent specimen never excites anything but admiration, and if nature unlocks her storehouse of knowledge and permits us to raise a Chrysanthemum two feet across, if it be perfectly proportioned I say it would be a marvellous revelation.

Whatever the future has in store we may confidently say that the Chrysanthemum will go on increasing in popularity and usefulness from year to year and adding its quota to the sum total of the world's economy and human progress.

SEED TRADE.

We have passed the safety line for most crops, and only uninterrupted favorable weather from now on can assure average results from this year's plantings, and this is especially true of most cultivated crops. When corn and potatoes are barely out of the ground by the middle of June, there is no question that we have lost our margin of safety. To assume that weather will be uninterruptedly favorable from now until harvest, is to assume the improbable, and to fly in the face of experience. We are certainly booked for a season of short crops, and the prudent have already accepted this fact. The only question now is, as to the extent of the shortage. Estimates are being made, but estimates are not facts, though they may be interesting.

To begin with farm crops, Snow, one of the most reliable crop experts in this country, estimates the total crop of winter and spring wheat of 1907 at 550,000,000 bushels, against 776,000,000 bushels in 1906. The indicated oat crop is 850,000,000 bushels, against 930,000,000 bushels last year. No figures are given on corn, but he says the crop will be hundreds of millions less than 1906.

While seedsmen are only indirectly interested in these figures, they are given to show how general are the unfavorable crop conditions, and how heavy will be the shortage in staple crops. It is not conceivable that with general farm crops showing so large a shrinkage from last year seed crops can be up to average, and in fact they will not be. So much is settled now.

It is interesting to note that a calendar issued in 1856 predicted that the year 1907 would be one of short crops, and that the weather would be cold and unseasonable. If this prophet were now living, he could hang out his shingle and do a rushing business in his line.

At various times there have been rumors that F. B. Mills, of Rose Hill, N. Y., was planning to move his business to some point where he could have better transportation facilities. Mr. Mills does a large business in seeds and plants, and very successfully, but "the wine of success is often intoxicating," and Mr. Mills has, at sundry times, been under the influence. He has tried his hand at various schemes outside of his seed and plant business, such as railroad building, the raising of fancy fowls, the making of incubators, the growing of ginseng, and finally, took a plunge into the general merchandise business along the lines followed by the Sears-Roebuck Company, but none of these ventures has been a pronounced success, and one or two have been rather costly failures. It is true he is still growing ginseng but just how successful from a financial point of view cannot be learned. Considering that Mr. Mills never spent an hour's apprenticeship at any seed house before embarking in business for himself, his great success in this business is all the more creditable to him, as he is the son of a poor farmer, and had scarcely been out of his father's door-yard before his first catalogue was

issued. Returning to the question of his removal, it can be said that while he contemplates establishing a branch in the West, his headquarters for the present at least, will remain at Rose Hill, as his investment here must have cost at least \$100,000, and is altogether too large and expensive an outfit to be abandoned without most urgent reasons and compensating advantages.

An organization to be known as the Iowa Seed Dealers' Association was formed recently at Des Moines. The officers elected were: president, C. N. Page; vice-president, Henry Fields, Shenandoah; secretary, W. C. Adams, Decorah; treasurer, J. T. Hamilton, Cedar Rapids. In addition to these officers the executive committee includes H. A. Johns, Sioux City and J. W. Ratkin, Shenandoah.

Among the many June weddings last week one of especial interest to the trade was solemnized on the 12th inst. at "Briar Crest," the country seat of Mr. and Mrs. William Henry Maule whose daughter, Miss E. Virginia Maule was married to C. M. Provost Herring. Owing to the recent illness of Mr. Herring, only near relatives and a few intimate friends were in attendance.

From the consular report of Solomon Berliner at the Canary Islands we learn that the crop of onion seed for 1906 was enormous and far exceeded the demand. The export of onion seed from Teneriffe to the United States for the year amounted to \$14,729 and it is estimated that over 40,000 pounds were left on the hands of the dealers.

Thomas J. Grey will sail for Europe on the Columbia of the Anchor Line on June 29.

CELERY GROWING IN IRONDEQUOIT.

Irondequoit, N. Y., is one of the most prosperous celery-growing sections in this country. In carload lots alone nearly \$120,000 worth has been shipped from there the past season, besides a heavy trade with nearby cities and express shipments to New York and other points.

There are many methods in use in successful celery growing, but the Irondequoit growers all follow the same practice which is here described. The first and most important factor in growing celery is a good seed. Much seed is grown in America and for some reason gives more or less of

RUSTIC HANGING BASKETS

soft, stringy and tasteless stock. Be sure, then, that you get the right seed to start with.

Celery delights and thrives best in a muck land, but can be grown on any good garden soil with proper cultivation. However rich and mucky the land may be, it is positively essential to good crops that it be annually fertilized with about two inches of well-rotted stable manure, carefully plowed under. Ample moisture must at all times be provided for. For early varieties the seed should be sown in hot beds from February 15th or March 1st. The seed must not be covered too deep and the bed kept quite moist until the seed germinates. A temperature of 60 degrees is about right. When plants are two inches high thin out and transplant to three inches each way. When four inches high, cut off the tops (to make stocky,) and enough of the roots to admit of straight planting.

The most desirable time for setting plants depends much upon local climate. If good plants are used they can be set out as late as August 15th, but best results are obtained by setting from the middle of June to 1st of July, which brings the plants to maturity in this section during cool, moist weather. The old-fashioned method of deep trenches in which to plant celery has been abandoned by the up-to-date market gardener as a useless expense. The experience of the best gardeners is that celery will do much better planted on the surface of the same quality of soil besides making a quicker and larger growth, also saving the unnecessary labor and expense of trench digging.

It is well, under all circumstances, to select damp or wet weather for setting plants. Secure plants from seed, of uniform size so that field growth, by good treatment, may be about the same. Set in rows from five to six inches apart, and press with the feet both sides of the plant, which in a measure will prevent drying out.

H. R. PEACHEY.

To be continued.

ZIRNCIEBEL'S GIANT PANSIES

Fresh Crop

Now Ready

Famed for a quarter of a century and when you buy them you get the best in existence. I am continuing the pansy business on exactly the same standard as carried on by my father, the late DENYS ZIRNCIEBEL. None genuine unless sold by me.

AUGUSTUS ZIRNCIEBEL, Needham, Mass.

GIANT MARKET. "The Variety for the Million." Trade packet, 2000 seeds, \$1.00.

GIANT FANCY. The NE PLUS ULTRA in Pansies. Trade packet, 1000 seeds, \$1.00.

INCORPORATED.

A. W. Tyler Nursery Co., Council Bluffs, Ia.; A. W. Tyler, G. E. Tyler; capital stock, \$10,000.

Spokane Nursery Co., Spokane, Wash.; H. C. Rice, J. H. Munro, J. M. Harris, E. L. Rice; capital, \$50,000.

The business established by Thomas J. Grey and successfully carried on for many years under the name of Thomas J. Grey & Co., has been incorporated under the laws of the Commonwealth of Massachusetts as the Thomas J. Grey Co. The business will be continued at 32 South Market street, Boston.

The officers of the corporation are: Thomas J. Grey, president and treasurer; Peter M. Miller, secretary; John P. A. Guerinneau, general manager.

MOVEMENTS OF GARDENERS.

Emile Fardel has been appointed head gardener to H. P. Booth, Great Neck, L. I., N. Y.

William Tricker who has been in charge of the plantings at West Side Park, Jersey City, this season is about to locate in Arlington, N. J., and continue in similar lines of work specializing on waterlilies, hardy perennial and nursery stock, landscape work, etc.

FIRE RECORD.

The Customs Seed Co., San Francisco, Cal., lost their wholesale warehouses on June 9.

The residence of H. Staeps, Milwaukee, Wis., was burned on June 8; partially covered by insurance.

On Tuesday, June 25, the red flag will wave for the last time for this season over the entrance to 201 Fulton street, New York, and Auctioneer Wm. J. Elliott wishes the trade to show up in large numbers on that occasion and help close the season in due form. He promises a fine stock of good things and you make the price.

Special Culture of the Kentia

PALM HOUSES OF JOSEPH HEACOCK

During the past 10 or 15 years palm culture has made great progress in the United States especially along the Atlantic seaboard. Large areas of glass are now devoted to their culture, many important establishments giving up almost their whole area to this crop alone. Nowhere is this more manifest than in the neighborhood of Philadelphia where the business may be said to have had its early impetus.

The principal varieties grown for the commercial trade are Kentia Belmoreana, K. Forsteriana, Cocos Weddelliana, Areca lutescens, Phoenix reclinata and Rhapsis flabelliformis. Lantania borbonica, once largely grown, has been dropped to a great extent.

At first the young plants were imported from Europe and "grown on," but now the up-to-date concerns such as the Dyer Co., Heacock Co., Chas. D. Ball, W. K. Harris, and Robert Craig Co., depend more on seeds for their stock. Great care is taken to have the seeds fresh and they are sown immediately on their arrival. Some varieties germinate in a few weeks others take a year and longer.

Joseph Heacock, who is an expert in kentia culture as is evidenced by a recent visit to his establishment where a large area is filled with perfect specimens, says that one of the first requisites is patience. He thinks Job would have had the only real test of patience if he had been put up against the palm growing job. "You put in the seed," said he, "and wait for months—often a year will pass before they are all out of the seed bed. All through this your capital lies buried: wages, coal, interest, and other bills keep piling up. The adage of the bumble sixpence does not apply to kentia culture for you have to wait four or five years before you get any returns to speak of." Mr. Heacock thinks on the whole he would have been better off if he had stuck to roses alone. This seems rather a pessimistic view in face of the fact that fifty to a hundred thousand seeds of kentia are being sown at this place every year.

In growing kentias, and in fact all kinds of palms, Mr. Heacock quotes Jefferson "Eternal vigilance is the

price of liberty." A compost of loam and peat in about equal proportions is the generally adopted medium with the addition of a little silver sand. Kentias require plenty of pot room and plenty of water both under and overhead throughout the summer. As Mr. Heacock says, the great enemy is scale. To keep down this pest tobacco water has been found the most effective. This is prepared in tubs large enough for dipping the entire plant, after which they are thoroughly gone over by hand carefully sponging every leaf. The same applies to red thrips although these are a less frequent enemy.

Five years ago the supply was ahead of the demand and many growers dropped out. At present the tone of the market is much healthier and there is good demand for all sizes. Large plants are scarce and bring high prices. Palms will always hold a high place as decorative plants and it is gratifying to know that our American growers are keeping fully abreast of the times.

GEORGE C. WATSON.

Cold Storage Lilies

All live and up-to-date florists grow
COLD STORAGE LILIES

THE forcing of cold storage lilies is no longer an experiment. If you have not already grown some of these we can refer you to **hundreds of florists** who make a success of this method and have lilies "all the year round"—The same as Lily of the Valley.

Our lilies are bought for and placed in cold storage for the express purpose of delivering bulbs in the **summer time**.

Lilium ongiflorum and giganteum take about two months to bloom from

time of planting from cold storage. Speciosum from five to six months, so that longiflorum wanted for Thanksgiving and Christmas should be planted about Oct. 1st, and speciosum and auratum about July 1st.

We have limited quantities of the following varieties on hand and offer subject to being unsold and at the prices named; will hold not later than Oct. 1st, for our customers without any additional charges for cold storage. **ORDER TO-DAY.** All cases repacked before shipment. Full cases sold at 1000 rate.

AMERICAN CARNATIONS IN DENMARK.

Paper Read Before the American Carnation Society at Toronto.

BY P. RIISE.

Carnations are not grown on a very large scale here yet but they are shipped in from Italy and Southern France from November till May and it is very hard for the home growers to compete with the imported goods. We cannot get as nice carnations in midwinter as you can in America, as the days are very short and we get a very little sunshine. I have been growing carnations here since 1899 and have been growing nothing but the American sorts. The first winter I had a good deal of trouble with the plants, a good many rotting on account of the damp and cloudy weather.

The first sorts I started with were Daybreak, Flora Hill, C. A. Dana, Wm. Scott, Triumph, Evelina and Gold Nugget but have now discarded them all with the exception of Triumph and Daybreak. Flora Hill did not give blooms enough and besides, white is not as much called for as colors. C. A. Dana was too small. Scott came too late with its second crop—it would not come till the last part of May. Evelina rotted all the first fall in a short time. Gold Nugget did not give flowers enough and the most of them came imperfect. Daybreak rotted all with the exception of two or three plants and I thought of discarding it, but by careful handling, I have since had very good success with it, and it has up till this day been one of my best paying varieties. It is a little inclined to be weak in the stem in the winter time. My best paying variety has been Triumph. It blooms early in the fall—some all through the winter. It seldom splits and it gives a good heavy crop early in the spring, but it sometimes is pretty badly affected with stem rot. I have since tried Ethel Crocker, Gov. Roosevelt and Mrs. Lawson. Crocker splits badly in the fall and all through winter and don't give a good crop before the middle of summer, too late to pay. Roosevelt gives a good flower, a good stem, but hardly blooms enough in fall and winter to pay and it also comes too late in the spring with the best crop to be of much account. Lawson splits badly and has rather short stem in the fall, but in early spring it gives

a heavy crop of nice flowers and a good long stem just in the right time to bring a good price.

In the spring of 1905, I bought some of the newer American varieties. I got them from England, but they are quite expensive there. They charge from 1 to 2 shillings apiece. Others have tried to import them from America, but not with very good success. In the most cases they were dead when they arrived. The varieties I am trying are Flamingo, Harlowarden, Harry Fenn, The President, America, Enchantress, Prosperity, Floriana, Indianapolis, Nelson Fisher and White Lawson. I have not formed any decided opinion of them yet as I only got a dozen of each, and have used them for propagating only last winter, but my idea of the different varieties so far this fall has been that Enchantress is a fine flower, good color and stem, but will not give so many flowers as Daybreak and was a good deal affected with stem rot in the field. Prosperity I don't think will pay, as variegated colors don't sell so well and it has not bloomed very much so far. Estelle looks as if it would be one of the best. It starts to bloom early and very freely, good sized flower, stiff stem, and doesn't split. Flamingo is a fine flower but too late. America is too pale in the winter. In the dark varieties Harry Fenn is to date the best. Harlowarden is rather too dark in winter. The President made a very poor growth in the field. White Lawson don't pay. Floriana is one of the colors the most called for, but has bloomed very little so far. Indianapolis may take the place of Triumph. Nelson Fisher, one of the best. Fine color, free blooming, good stem, don't split, has made a good growth in the field and bench and not troubled with any kind of disease so far, but very hard to propagate in winter but roots quite freely in August.

We plant in the field about the first of May and lift again the first part of August, but we hardly get as strong growth as you do in the United States. Heretofore I have been propagating my plants in the fall and early winter, but this year, I have propagated most of my plants early in August and I now have very strong plants, and then keep them quite cool, through the winter just about freezing. In that way I take the cuttings from the old plants just before throwing them out. They give very good cuttings at that time, as we are not troubled much with red spider and the summer is not

so hot as that they will make a good growth all through the summer and in this way we save the plants a good deal in the fall. In some places here they keep the young plants in a cold frame all winter, only protecting with glass and shutters and the ground will at times be frozen hard, but it is mostly the European varieties they keep in that way, but I think it a little risky as I saw in one place where they all died in a short time from drip and rot.

When I first started I kept my carnations on a night temperature of about 50 degrees Fahrenheit. The stems would then be rather weak, but nevertheless they sold well all through the winter at five cents apiece, but in the last few years, the importations from the South have increased to such an extent that good carnations are sold here in midwinter at 25 to 30 cents a dozen; in fact, better flowers than we can produce here in the short days. I now keep them on about 38 to 40 degrees Fahrenheit through December, January and February. In that way we get a very few flowers in midwinter, but the plants will be better and stronger in the spring and will give a good crop in April, May and June, the time when there is the biggest demand for them. On the whole, we have to look for such varieties as will give a good crop in October and November and again in the spring, and we will get a better price than in midwinter. They are at present working on a revision of the tariff and if we should get a duty on cut flowers, it would be a great help to the florist and there would be grown a great many more carnations round this city.

NEWPORT PERSONALS.

The summer people are coming in fast now that the heat in the cities is beginning to be felt.

Ralph Armstrong is here for the summer in charge of the Wadley & Smythe store on Bellevue Ave.

F. L. Zeigler has opened a store on Bellevue avenue. Mr. Zeigler will also continue to do business at his old stand on Broadway.

Bruce Butterson, president of the Newport Horticultural Society is seriously ill at his residence on Parker Ave. Last reports however indicated an improvement in his condition. Much sympathy is manifested for Mr. Butterson by his numerous friends here.

NEWS NOTES.

J. F. Pogam has discontinued business at Washington, Pa.

The Savannah Floral Co., is the new name adopted by the firm of George Wagner's Sons in Savannah, Ga.

Joseph Herzog of Minneapolis is the new manager of the Wm. Roethke Floral Co.'s business at Bay City, Mich.

E. S. Morse has purchased a half interest in the Ernsberger greenhouse at Fort Wayne, Ind., and in August will take full charge of the business.

Tony Russo, who broke into the greenhouses of Peirce Bros., at Waverley, Mass., and stole carnations and other flowers has been ordered to pay the sum of \$50 and leave the State.

The capital stock of the Franklin Floral Co., Columbus, O., has been increased from \$15,000 to \$30,000. It is said that additional buildings will be erected.

The disappearance of John Allwood, from Hudson, Mich., was followed by his announcement from Canada that he was on his way to Alaska. His business affairs are left in the hands of his wife for settlement.

The South Bend (Ind.) Floral Company held its opening in the Oliver Hotel apartments on June 13. There was an elaborate floral decoration and an immense crowd of visitors, each of whom received a souvenir of the occasion.

Favorable report has been made in the State Legislature by Appropriations Committee on allowing \$40,000 for a horticultural building and greenhouses at the Connecticut Agricultural College, under the supervision of G. S. Palmer, A. J. Pierpont and L. J. Storrs.

Charles A. Dards has bought a four-story dwelling at No. 114 West 72nd street, New York, and will remodel the building for business purposes, opening as soon as completed a branch of his Madison avenue flower business. This is the first sale of a residence on this street for business purposes.

James Cole, 55th street and Chestnut, Philadelphia, is engaged in a controversy with the city over the appropriation of some land for street purposes, to which he claims ownership. He has fenced it off and plowed and planted it with roses and carnations and intimates that he will take extreme measures to protect his crops. They are not all asleep in Philadelphia.

CUT FLOWER MARKET REPORTS

BOSTON

The market still continues in bad shape owing to the enormous supplies forced in by the extremely hot days of the present week. Qualities are also affected considerably by the heat. Up to the present time roses have been remarkably good. Carnations are very abundant and in lots of one thousand or more the buyer makes the price. Peonies are also coming in heavily, but the special grade blooms bring a fairly good figure. Many are poor and ragged, however. Sweet peas have experienced a big slump. Pink pond lilies are now coming in; sales slow at \$2 to \$4 per 100.

COLUMBUS

Stock of all kinds is coming in more freely, with the natural result that prices have softened considerably. Carnations are in enormous supply. Outdoor stock is beginning to come in large quantities, especially peonies. A very careful comparison with a year ago, shows hardy stock to be from three weeks to a month behind. Our florists will all be very busy the rest of the month with the usual June weddings and school commencements. Bedding plants are now about all planted. Trade is certainly good.

DETROIT

The time has arrived when the supply overreaches the demand. While funerals or commencements keep most of the stores humming there is a remarkable lack of large weddings. Flowers of every description are plentiful. The plant men also have sold out quite generally notwithstanding the late beginning of the planting season.

INDIANAPOLIS

Business has kept up nicely for the past week. The market shows signs of a break in prices. Roses are plentiful and good for this time of the year. Carnations remain of excellent quality and there seems to be a good demand for them. Lilies are to be had in large numbers; also lily of the valley and sweet peas. Thousand of peonies are being cut but it is impossible to dispose of all profitably. This has been an unusually good season for the retailer, the cool weather enabling him to obtain good prices for his stock. The veranda and window box, as well as the bedding trade goes merrily on and probably will keep the florists busy till the first of July. The green goods market is well stocked and there is an excellent demand.

NEW YORK

Present conditions do not favor the maintenance of set prices on anything. The cut of roses is not heavy but the small amount of business being done and the volume of other material keeps quotations very low. Carnations are very plentiful and generally of excellent quality but they are cheap. The belated peonies are just beginning to come along and present indications point to no shortage during June. Sweet peas are very abundant and fine.

PHILADELPHIA

Business here was rather spasmodic last week, but on the whole it may be summed up as a fairly satisfactory market for mid-

June. The first half is now the best, most social affairs being through by Friday or Saturday, when people leave for the seashore or mountain. Beauty roses were too plenty on Monday, scarce later, and by Saturday too many again. Bridesmaids had the call on higher grades, but Brides and Kaisers were in best demand in the lower qualities. Richmonds and Libertys are of good quality; carnations fine, but entirely too plentiful; impossible to find a market for more than one half of them. Peonies are in their glory at present but "what's the use"? It is impossible to find a market for all the fine stock coming in. The lily of the valley market is the steadiest of any at present. The outside sweet pea crop is now coming in and is very fine. Ten-week stocks, Bride and Blushing Bride, and Crawford's May gladioli are conspicuous; also hardy phloxes and blue cornflowers.

Trade so far this month is the best we have had in years.

Stock is plentiful, the growers have reduced their figures materially but the retailers have not as yet made any cut in the prices. Roses are still retailing at figures which allow the store men a nice profit. The weather is exceedingly hot and its effect is already noticed on the size of the carnations. A number of banquets, also graduating exercises have greatly increased the demand. Secretary Taft was banqueted on the 14th; the floral decorations were extensive. Planting is still going on quite heavily.

WASHINGTON

After a solid week of rain, Washington is enjoying regular summer weather, and the market has become somewhat crowded as a result of the sunshine. Carnations have taken a drop in price, and are in abundance. Crimson Ramblers are just coming in and the quality is unusually fine. Planters of fall crops are away behind in their work, and should there be early frosts there will be nothing doing in the dahlia and cosmos lines. Commencements still delight the heart of the retailer, but the end of June will wind them up, and with society people off for the seashore, etc., there will be but little flower news from Washington for the next two months.

BUSINESS CHANGES.

LePage Bros., succeed Hilary E. LePage at Stamford, Ct.

G. Johnson has hired the Yates greenhouses at Champaign, Ill.

Walter Garbett has bought the Brad-dock street store of L. I. Neff, Pittsburg, Pa.

Frank S. Hicks has severed his connection with Hicks & Crawbuck, Inc., Brooklyn, N. Y., having sold his interest to Mr. Crawbuck by whom the business will be run under the old name. Mr. Hicks has rented the store at 52 West 28th street, New York, where he will carry on the wholesale cut flower business. E. J. Van Ryeper, who has been in the employ of Hicks & Crawbuck for some time will go to New York with Mr. Hicks, who expects to open up early in July, so as to get nicely started by the time the fall business begins.

OBITUARY.

Dr. Maxwell T. Masters.

It is with a feeling of sadness that we record the death of this eminent horticulturist and author. The loss to the Gardeners' Chronicle of London, over which he has presided as editor

DR. MAXWELL T. MASTERS.

for more than forty years, is a severe one, but it is equally so, in a broader way, to every lover of horticulture and admirer of its noble exponents among whom Dr. Masters stood in the first rank. By those who knew him personally he is spoken of as a genial gentleman, and kind and sympathetic friend, and the announcement of his demise has called forth tributes to his worth and expressions of bereavement such as it is given to but few to merit. Dr. Masters died of heart failure on May 30 at his residence at Ealing, after four weeks' suffering from pleurisy and pneumonia. He was 74 years of age. We know that among our readers there are many to whom Dr. Masters and his work are well known, and we feel sure that they will join with us in extending to the afflicted family of the deceased, to our distant contemporaries, and to the horticultural world generally our sincere sympathy in the great loss which they have sustained.

Other Deaths.

Paul Pavelchik, wire designer, died in Chicago on June 1.

George Marzolf, a retired gardener of Allegheny, Pa., born in Alsace, Germany, died on June 8, aged 67. Three sons and a daughter survive him.

Mrs. Johanna Duane, widow of John Duane an old and popular member of the Boston florist fraternity, died at her home in West Medford, Mass., on June 13, aged 83 years.

Otto Schwill, Sr., died in Memphis, Tenn., on June 10, aged 61. Mr. Schwill was born in Koenigsberg, Germany, but came to this country in 1861, and since 1869 has been located in Memphis as the head of the firm of Otto Schwill & Co. He is survived by a widow, two sons and two daughters.

PHILADELPHIA FLOWER NOTES.

Pennock Bros. are making a specialty of steamer baskets at present. This is an outlet which has been paid but scant attention to as yet. They make a nice display of artistic baskets with the name of steamer, etc., on the tag—a timely reminder which attracts the attention of the passerby, and loosens the purse strings of the wealthy. What we need is more thinking and enterprise in new directions. This move of the Pennocks is in the right direction. Atlantic and Pacific coast florists please copy.

Wm. H. Vance has found Glacier one of the best paying propositions in carnations this year. This variety is the greatest producer of shorts in the market. While the price is small the aggregate returns for the season have been very satisfactory.

May flowering tulips have again made a big stride in popular favor. Bookings so far for next fall's delivery are nearly double last year. The favorite varieties are Bouton d'Or, Isabella, Maiden's Blush and Sweet Nancy. Bizarres and Bybloemens also come in for a fair share of the demand.

W. F. Feller formerly of Red Hook, N. Y., will continue violet raising in Rhinebeck.

HORTICULTURE'S REPRESENTATIVES.

The following named gentlemen represent this paper in their various local districts, and are authorized to accept subscriptions, advertisements and news items:

BUFFALO, N. Y.—E. C. Brucker, 385-87 Ellcott St.

COLUMBUS, OHIO—M. B. Faxon, 246 Oak St.

CINCINNATI, OHIO—Frank W. Ball, 31 East 3d St.

DETROIT, MICH.—Frank Danzer, 1487 15th St.

INDIANAPOLIS, IND.—George B. Wiegand, 1610 N. Illinois St.

NEWPORT, R. I.—David McIntosh, Ledge Road.

PHILADELPHIA, PA.—George C. Watson, Dobson Bldg., 9th and Market Sts.

PITTSBURG, PA.—James Hutchinson, corner Dunmoyle and S. Negley Aves.

PROVIDENCE, R. I.—Eugene Appleton, 234 Broadway.

ST. PAUL and MINNEAPOLIS—John A. May, 163 Iglehart St., St. Paul Minn.

TOLEDO, OHIO—J. L. Schiller, 929 Prouty Ave.

"Nothing except the mint can make money without advertising."—GLADSTONE.

Niagara Falls, N. Y., June 17, 1907.
HORTICULTURE Publishing Co.,

Gentlemen:—Please discontinue our adv. immediately, as we are being swamped with applicants, both in person and by letter, and we have secured a good man.

Thanking you for your courtesy and promptness, and assuring you of our future patronage, we remain,

Very truly yours,
E. A. BUTLER & SON.

Gentlemen:—Kindly discontinue my advertisements of Hanging Baskets as I am way behind on orders.

Respectfully,
F. W. BALL.

Cincinnati, Feb. 18, 1907.

Please discontinue my ads. for now. Will have some more stock to offer and shall be glad to send my ad. to HORTICULTURE.

JOHN STAMM.

Hutchinson, Kan., Mar. 18, 1907.

Please discontinue my geranium ad. I have so many inquiries for plants and I am sold out of the small sizes I advertised.

WM. DOEL.

Pascoag, R. I., April 13, 1907.

Take out the geraniums and salvias from my advertisement. Through this advertisement in HORTICULTURE I have disposed of my surplus stock of both.

R. L. GOINSALVOS.

Waltham, Mass., April 27, 1907.

Would say and glad to say that I am sold out of my pansy stock. Thanking you very kindly for the immense business your paper has alone favored us with,

Yours truly,

WM. DOBBERTIN.

Rochester, N. Y., April 29, 1907.

You will please not repeat our large advertisement of last week, as the goods we offered have all been sold. Over \$500 worth of direct sales from one offer pays us well, as in fact all our advertising in HORTICULTURE does.

A. H. HEWS & CO., Inc.

Cambridge, Mass., April 25, 1907.

"When you pay more for the rent of your business house than for advertising your business, you are pursuing a false policy."—FRANKLIN.

If you want to do business Advertise in Horticulture.

BETWEEN YOU AND ME, What do you think of the Buyer's Directory and Ready Reference Guide of HORTICULTURE? I always look it over before I do any buying.

WANTS, FOR SALE, ETC.

Advertisements in this column one cent a word. Initials count as words. Cash with order. All correspondence addressed "care HORTICULTURE" should be sent to 11 Hamilton Place, Boston.

PUBLICATIONS RECEIVED.

Number 2 of the Southern Florist, published at Poulan, Ga., has appeared. We extend greetings to our young contemporary and best wishes for its success. It has a large and needy field which, when plowed, harrowed and seeded, should yield a bountiful harvest to the patient and persistent toiler.

The Blossom End Rot of Tomatoes is the subject of Technical Bulletin No. 3, of the Massachusetts Agricultural Experiment Station, prepared by Elizabeth H. Smith, M. S. The bulletin gives the results of investigations pertaining to the cause of the so-called "Blossom End Rot" together with a discussion of results obtained by other investigators.

Bulletin No. 202 of the N. J. Agricultural Experiment Stations treats on the Forest Trees of New Jersey, Byron D. Halstead being the author. It gives a very complete botanical and popular description of the trees indigenous to the State, with numerous engravings, also a list of forestry papers published in State reports and a copy of the Forestry laws.

Forty-ninth Annual Report of the State Horticultural Society of Missouri. Issued by that hustling secretary and polished gentleman L. A. Goodman, and contains full records of the meetings at Moberly, June 12, 13, 14; Boonville, December 4, 5, 6, 1906. On reading the very complete records of the papers, discussions and other proceedings one cannot but recognize that the members of this prosperous society have a glorious time when they get together—plenty of business, but a liberal intermixture of social enjoyment and entertainment as well.

Bulletin No. 4 of the American Association of Park Superintendents has been issued. The contents are papers on Roads, Drives and Parks and Their Construction, by J. F. Foster, superintendent of South Park System, Chicago, John C. Olmsted, C. E. Putnam and J. A. Pettigrew, Boston, Theo. Wirth, Minneapolis, and John Dunbar, Rochester, N. Y.; Evergreens for Parks by John Dunbar, Prof. Cowell, Buffalo, F. Shonnard, Yonkers, N. Y.; Fertilizers by several contributors. The out-door gardener will find it teeming full of valuable hints.

GREENHOUSES BUILDING AND CONTEMPLATED.

New.

Galesburg, Ill.—Leslie Mason, range of houses.

Additions.

Oneonta, N. Y.—John Strong, range of houses.

Denver, Colo.—Park Floral Co., three houses.

Spokane, Wash.—Spokane Nursery Co., two houses.

Syracuse, N. Y.—Gustav Bartholome, range of houses.

New Orleans, La.—Charles Eble, range of houses.

Elyria, O.—L. C. Hecock Floral Co., range of houses.

Valley Stream, N. Y.—John Weston, two houses, 28x200.

Wyomissing, Pa.—Frank D. Shearer, one house 29x100.

San Francisco, Cal.—C. C. Morse & Co., range of houses.

Chillicothe, Mo.—R. L. Isherwood, one carnation house 27x100.

Athol, Mass.—G. W. Sutherland, one chrysanthemum house, 17x100.

SOWING VEGETABLE SEEDS.

One great point to remember in supplying a house with vegetables is the importance of keeping up everything that can reasonably be expected to continue available throughout the season. For that reason very frequent sowings should be made. Lettuce is also an important necessity always, and there is no question but it is sometimes rather hard to have it in good condition, especially in very hot weather. A good method to pursue by-and-by would be to make sowings at intervals in flats much the same as is done for very early use, pricking them off in the same manner into other flats, and then when well established lifting them with as much soil as possible and planting them in the open ground.

WHY WE IMPORT APPLES.

It is a fact that Australia has been shipping apples to this country. Millions of bushels from our own orchards rotted on the ground last fall, or were fed to hogs, because transportation to the markets was inadequate or came so high as to be prohibitory.—Detroit Free Press.

CAMBRIDGE, MASS.

KIND EVERY OF WARE T FLORIST

The Standard Steam Trap

Certificate of merit awarded at Washington, D. C., Florists' Convention. For simplicity, durability and perfect satisfaction it has them all guessing. It is in a class by itself. To see it work a large plant as well as a small will convince the most sceptical that it is the Florists' Friend.

The Standard Ventilating Machine still leads as the most durable, easiest working and the all-around satisfactory machine.

The Duplex Gutter is gaining all the time, over 12,000 feet sold thus far this season. Catalogues free.

E. HIPPARD, Youngstown, Ohio

H AND C

THE H & CO. is like this: When you get ready to build, go about a bit and talk it over with men who are thoroughly up-to-date, successful. They know what they are talking about and so will you when they're through. But don't put too much importance on this man's theory, or that man's pet idea; what you want is tried and proven facts. When all this "looking around" is over, come to us and we can give you some cold, brittle, what-others-have learned statements. Along with the statements, goes a line-up of the H & Co. construction and its whys. You'll find it a good deal of satisfaction to have had such a talk—to own an H & Co. house. Write us.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway, NEW YORK.

The Newest Wrinkle in Ventilation is Our Encased Self-Oiling Gear

Not that a self-oiling gear is new, but our way of making it *is*. We will tell you two of its strong points, and then want you to write for a full description of the rest, with a price.

One strong point is the *square* bearing shaft which makes slipping absolutely impossible, no matter how heavy the work.

The Other is its Freedom from Complicated Mechanism, its Compactness

Compare this in your mind with other houses built other ways.

An Eleven Foot House

makes a good general plant or orchid house and serves in this particular case to connect the potting room with the large greenhouses on either side. Here you can see to splendid advantage the clean sweep, absolute lightness of the U-Bar construction and get an idea of wide glass advantages. There is panel ventilation underneath the slate sided benches; the steel casing of roof bars and steel bench frames are heavily galvanized, while every bit of iron or steel is given a glistening coat of aluminum paint, making them proof against mildew and adding wonderfully to the house's attractiveness. Send for catalog and look on page eighteen for a description of the remaining houses of this extensive range at Madison, New Jersey.

Ferns in Flats

Ready for Delivery after July 15th.

Each flat contains 11¢ clumps of small plants, which can be divided in 3 to 5 plants accordingly, all ready for potting.

We can furnish these ferns, grown separately, each flat containing any one of the following sorts, ferns all good salable varieties.

Aspidium tsussimense	Pteris Gilbertii
Cyrtomium Falcatum	Serrulata
Pteris Adiantoides	Serrulata
Cretica alba lineata	cristata
Cretica magnifica	Serrulata
Hastata	variegata
Mayii	Wimsettii

Mixed varieties.

Price, \$2.00 per flat.

Ornamental Hedges

What kind of a hedge shall I plant? This is a perplexing question that often confronts the suburbanite. In deciding it, too often the advice of the man-of-all-work is taken and his knowledge of artistic landscape gardening is far from being practical or in keeping with the surroundings. The results from plantings of this kind can be seen on all sides. In some localities a certain kind of hedge will be used exclusively, giving a set and far from artistic appearance. Often a tall-growing hedge will be perched on a terrace emphasizing the already high position.

Some 30 or 40 years ago the hedge was chiefly looked upon as a means of dividing property, little attention being given its attractiveness to surroundings. Rapidity of growth and cost were the chief consideration. The Osage orange, honey locust and buckthorn are examples of this type of hedging. At this period more thought is being given to variety in form and foliage, which is resulting in some exceptionally pretty effects. One very noticeable improvement has been made in that hedging is supplanting the varied unsightly styles of iron and picket fences, giving a more harmonious effect to the property in general.

EVERGREEN HEDGES

The suggestions may be made as to the best forms of the various kinds of plants available for hedging. They can be for convenience divided into the following classes: Evergreen, deciduous—tall and dwarf—flowering and perennial hedges. There is no doubt that the evergreen hedge is the most desirable form. It gains this distinction in that it is effective at all seasons. Many have been discouraged in using it as the results in the past have not been wholly successful. A very good lesson is to be learned from the cause of these failures. After an evergreen hedge has been planted, presuming that it has been given good soil and location, it demands careful attention at regular periods. Annual mulchings should be given in the fall and early summer a judicious pruning and thinning out of the under-growth of dead wood. How often the hedge is neglected after the planting, causing the plants to lose their lower branches and produce an unsightly appearance.

Ranking as the best in evergreen hedges may be mentioned hemlock and Norway spruce and American arbovitae. These trees are unquestionably the finest where a tall broad hedge is desired. Never plant an evergreen hedge where it will be subjected to continual shade. This has often been a costly experiment. The Japanese cedars such as *Retinospora plumosa*, *plumosa aurea* and *squarrosa* produce decidedly pretty effects though requiring very careful attention in the point of pruning and winter protection from heavy snows.

BROAD-LEAVED EVERGREEN AND DECIDUOUS HEDGES

In localities where broad-leaved evergreens flourish, quite a novel and pretty hedge can be had from the *Mahonia aquifolia* or, as it is commonly known, Oregon

Grape. Without question the California privet as the best tall hedge plant is at the present day the most popular known to the public. Though it has only been largely used for the past 15 or 20 years it has established itself as the most popular plant for this purpose. It is surprising how quickly it develops into a well-formed bushy hedge. Many people inquire as to the time to prune. The amount of growth made should govern the time to prune. Constant pruning encourages a thick, bushy hedge especially in the privet. The buckthorn, honey locust and Osage orange are commonly used as farm hedges and for this purpose are very good but not at all suited for decorative effects on small suburban places.

Of all dwarf deciduous hedge plants the Japanese barberry is by far the best. It thrives in almost any situation, doing well even in a partly shaded position, and in growing keeps a close neat habit not making pruning a necessity, except possibly once a season. The foliage too is particularly pretty and in the fall takes on a brilliant scarlet color. In the winter it is effective with its many bright red berries. The purple variety of barberry is another form of hedge that is well worth recommending and retains its purple foliage until late in autumn.

FLOWERING HEDGES

To those wishing flowering hedges there is a wide variety of kinds from which to choose. The most popular and well-known kinds are, the Rose of Sharon or althaea with its great variety of color in flowers, some of recent introduction being especially attractive, *Spiraea Van Houttei*, with its beautifully pendulous habit of growth and flowering, Burning Bush or *Pyrus japonica* coming early in the spring with its well-known crimson flowers, *Hydrangea paniculata grandiflora* with its grand fall display of flowers, *Spiraea Anthony Waterer* with its flat heads of flowers appearing all summer, and the dwarf *Deutzia gracilis* bearing its dainty, white flowers in May and at all times making a neat, compact hedge. All these are well-known and do well in ordinary locations. In addition to these there are several well worth mentioning. *Forsythia viridissima* brings a bright, cheerful show of flowers in early spring and flourishes in almost any location.

The lovers of roses can secure a very attractive effect with *Rosa rugosa*, intermingling the red and white flowered varieties. The foliage of these roses can be depended upon for a pretty effect at all periods, being immune from all insect attacks. The tamarisk is a most satisfactory plant for seashore hedging, the salt air having the effect of producing a strong growth. The delicate sprays of pink flowers are very pretty in contrast with the fern-like foliage.

Probably as well-known as any flowering plant for hedging are the hawthorns, especially the English kinds. The strong growth and attractive foliage coupled with

the good and varied forms of foliage make them all well liked. They are not used as extensively in this country as in England, and yet deserve particular mention. In addition to the English varieties, special note should be taken of the American scarlet hawthorn (*Crataegus coccinea*) and the Cockspur Thorn (*Crus-galli*).

HEDGES OF HERBACEOUS PERENNIALS

The hardy herbaceous perennials may be considered in this article as they have quite a bearing on the planning of formal gardens and borders. Probably the best for edging are the variegated-leaved Day Lily (*Funkia undulata variegata*), English Daisies (*Bellis perennis*), Candytuft (*Iberis semperflorens superba*), Scotch pinks (*Dianthus plumarius*) in variety, and Sea Thrift (*Armeria maritima*). In connection with these edging plants may also be mentioned the Phlox subulata in variety, and Cerastium tomentosum or, as it is commonly known, Snow in Summer.

The possibilities in variety in hedge plants are great and in addition to the plants already mentioned there are others that can be used effectively, depending on the surroundings and exact location.

Murray Chandler

Usefulness of the Late Tulips

(Continued from Page 810)

THE COTTAGE TULIPS

Amongst a number of species and varieties of the late May flowering or Cottage tulips, we have found the following the best. Lutea (Bouton d'Or) is a charming yellow late kind and it is excellent for bedding, coming into flower late in May. Tulipa Gesneriana is over 300 years in cultivation and we have no better kind yet. It is a handsome border plant; we have a clump in our garden which has not been disturbed for 20 years and it produces immensely large flowers annually. There are quite a number of varieties of this fine species, but the gem of them all is the variety spatulata which has very large flowers of brilliant carmine with blue black centres. It is excellent for bedding, the length of its stem and the graceful poise of its large brilliant flowers being very striking.

Golden Crown is an exceptional valuable variety we have grown for several years and it seems the longer we know it the better we like it. As a border plant and a bedder it hardly can be beaten. When the sun shines on its petals the bed is simply a mass of gold. Tulipa Greigi is a species and in my estimation is the showiest of all the tulips. It flowers early, end of April or early May. Its flowers are very large, intense scarlet color and has beautifully marked foliage.

May Blossom is a good late variety with long stems and the flowers are striped with bright rose. The variety Picotee (Maiden's Blush) is very distinct with excellent habit and very pleasing flowers, white mar-

Tulipa retroflexa is a species with light yellow flowers, the petals long and recurved, and it comes into bloom about the middle of May. Another species of striking distinctness is Tulipa Viridiflora. Its flowers are green margined with yellow, making a very pleasing combination of colors. There are many other species and varieties of late flowering tulips which might be added all of them being pleasing and interesting.

THE PARROTS

The origin of the Parrot tulip is very uncertain; some claim them to be species while others say they are mere varieties of some of the older species. Let that be as it may; for our purpose at the present time that is of no importance to us. They probably have the brightest colors and most curiously formed petals of all the tulips. The best varieties are Admiral of Constantinople, Feu Brilliant, Markgraaf, Monstre Rouge, and Perfecta.

We do not like the double tulips as well as the single kinds. They have valuable lasting qualities which recommend them as bedding plants. When the flowers are cut they last a very long time. La Candeur is a very good white, Rex Rubrorum is a fine scarlet, and La Blason is also a good white variety, Murillo is very pleasing, flowers bluish white shaded with rose. Tournesol, both scarlet and yellow, are good varieties.

LATE TULIPS NOT APPRECIATED AS THEY DESERVE

For gardens or any place where a fine display is expected to be kept up the value of these late tulips is unestimable. The Boston Public Garden is noted all over the country for its fine display of tulips. I made my way there a few evenings ago expecting to see a good showing of the late kinds as I knew the earlier ones were all gone some time ago, and was very much disappointed to find that there were no late kinds planted for some reason or other. Such places should be kept up with the march of progress in horticulture.

Any person who wishes to grow these late kinds for the first time, will, I know, be perfectly pleased with all the varieties I have mentioned. Today, June 12th, we have many of the above kinds in bloom. In ordinary seasons they are generally through blossoming about the end of May.

Robert Lammerson

Strawberries of Washington State

See Frontispiece.

Strawberries grown in the Sunnyside district, west of Spokane, Wash., are famed all over the Pacific Northwest for their flavor, color and form. The early crops this season, marketed in May and June, brought high prices, the demand exceeding the supply. Several growers realized as much as \$537 the acre. The berries are grown under irrigation, which is practiced in all lines of fruit culture in the district. Water is furnished by the Sunnyside canal system, built in 1891. It is 57 miles in length. It is owned by the government, which bought it for \$1,250,000, from the Washington Irrigation Company. It is fed from the Yakima river and waters 64,000 acres, 30,000 of which are under cultivation. The water rights are \$30 the acre with a maintenance charge of \$1 the year after the first season.

Ornamental Conifers

(Continued from Page 715)

JUNIPERUS

The hardy junipers are very useful trees for decoration on account of their compact pyramidal or pillar shape and varied shades of green, blue and yellow. There are a great number of species from the West down to Mexico, around the Mediterranean Sea and Central Asia that are not hardy in New England but the more northern part of our hemisphere furnishes us with good plants. The nomenclature of the junipers is greatly mixed up and some of them are found in cultivation under many names. I will try to give them as nearly correct as possible.

J. communis, the common juniper, the true type of which comes from Europe, in cultivation is a more or less large pillar-shaped tree. The needles are open and prickly. It is a compact tree of a light bluish-green color. There is a yellow form which grows more fan-shaped. The American form that is called *communis*, also, is by right *communis Canadensis*. It is a low spreading bush with the same foliage; the yellow form, *Can. aurea* is very useful to cover sunny banks. *J. c. fastigiata* or *hybernica*, the Irish juniper, grows to a tall, slender pillar, the branches pressed one against the other, and the leaves shorter than in the common one, and of darker green. *J. Suecica*, the Swedish juniper, is the same as the preceding only lighter green. *Hyb. compressa* is a diminutive of the Irish juniper; *nana* or *alpina* is a dwarf creeping form from the higher altitudes; *hemispherica* or *echinaeformis* grows to a dwarf small round prickly ball; *pendula* looks like the common European juniper with open top and pendulous branches. *Oblonga pendula* from the Caucasus mountains has its leaves more separated, thicker and not so pointed and its branches are pendulous. There is an unnamed form from China which has the growth of the Irish and the foliage of the common one. *Withmaniana* has the appearance of the common juniper, not quite so compact and the leaves fatter and less pointed.

J. rigida from Japan, where it represents the type of *communis*, has the branches spreading and the young shoots pendulous. The leaves are thin and long, very pointed and set more apart than in the common juniper. It is a nice little tree to isolate and looks quite different from the others.

All those named junipers which have their leaves open and awl-shaped belong to the *Oxycedrus* tribe. The others, *Sabinae*, have two kinds of leaves, scale-like, closely set along the shoots when growing and in some open when older; while the first ones are merely bushes among the others some are regular trees.

J. sabina, also called *cupressifolia*, is the true savin from central Europe; it grows to a bush, sometimes a little tree, with erect branches, thickly clothed with erect branchlets, both pointed at the tips, furnished with scale-like dark green foliage. The American form of it, *s. procumbens*, is a wide-creeping bush, very useful for covering rocks and banks. *J. s. tamariscifolia* is dwarfer than the type, more spreading and compact and of a glaucous color; *s. argentea variegata* is also dwarfer than the type, and has little white shoots mixed with the others; *s. prostrata* is another creeping form but shorter and more compact than *procumbens*.

J. virginiana is our red cedar which grows nearly all

over the United States. On account of the different climates and situations where it is found this is a tree which varies much in size and appearance; under cultivation it also varies greatly and many good forms have been raised from the seed beds. Some of the best are: *v. glauca*, very blue in growing time, changing to a grayish green in winter; *v. glauca pendula*, the same color, the young shoots pendulous; *v. dealbata* or *fragrans*, which is more of a grayish blue color and finer foliage; *v. elegans*, with young shoots yellow in color, of beautiful effect among conifers, unique in color; *v. Scottii*, very light green in color and the shoots more cord-like. There are a few which are yellow variegated; *v. Triomphe d'Angers* is the best as to color, but a slow grower; *v. pendula* is the most pendulous of all, with the shoots inverted; *v. Chamberlainii*, *v. Bedfordiana* and *v. viridis pendula* are erect in growth, with pendulous shoots; *v. tripartita* looks much as if it was a hybrid between *virginiana* and *sabina*, being similar in growth to the last named, with more horizontal branches and shoots.

J. Chinensis grows to a compact large pillar-shaped tree; the foliage is nearly all open and very pointed, except that on the top of the young shoots they are closed. It and its forms are good hardy trees and fine ornaments for the lawn. *Ch. aurea* has the same shape as the type, of a beautiful yellow color; in fact it is the best yellow conifer in cultivation, but wants to be shaded in winter as it is easily sun burnt. *Ch. stricta* and its variegated forms is a striking tree. It forms broad, very compact pyramids of a dark green color; all the shoots are erect and close one against the other, growing toward the center of the tree with rough open foliage. *Ch. Pfitzeriana* is a new form which originated in Germany, of a graceful fan-shaped pendulous outline, grayish green in color. *Ch. pendula* (if really a form of *Chinensis* which is doubtful) is a nice tree with long string-like pendulous shoots, branches well apart. *Ch. procumbens* and its white variegated form are good creeping shrubs to cover rocks and slopes; the foliage is very coarse and of compact growth.

J. Japonica is said to be a form of *Chinensis*; it is a dwarf, irregular-growing and spreading little tree. The green form is not much seen in cultivation. *J. aurea* has the shoots covered with scale-like adpressed little leaves of a nice yellow color; in dry situations it is subject to red spider. *J. aurea variegata* is somewhat dwarfed, of a nice healthy green color speckled with yellow.

J. Fortunei pyramidalis and *J. Neaboriensis* are both elongate pyramidal, symmetrical in form, very compact, of a dark green color. The first has the leaves more open than the other. Both make good plants for formal gardening.

J. occidentalis is a western tree which is found from Washington to Mexico. It varies much with its geographical distribution. It is an alpine tree; the most northern form is the only one about hardy in our country; in the south it is a straight erect tree of large size. A much smaller one has the leaves scale-like adpressed along the dull green shoots.

tion. No doubt this is true. It is also true that no business affords wider scope for the exercise of the highest intellectual qualities; in fact, it demands such and a broad, thorough scientific education is one of the best qualifications a young man can bring to this as well as all other branches of horticultural industry. A thorough training on fundamental principles as given in the practical courses at the Massachusetts Agricultural College coupled with a broad knowledge of the markets, the resources and the commercial needs of the world, more especially of his own country, are among the almost indispensable requisites for the man who would make his mark in the seed trade of the future.

The thirst for novelty and sen-

"The Frivolous Work of Polished Idleness" is to be appeased, we are told, in the case of one Newport millionaire, by the construction of a series of revolving flower beds to be turned by electric motors at the rate of a revolution a minute, the intent as indicated in a newspaper account, being to "add to the conspicuousness of its owner." Doubtless this end will be gained all right but we fear that

"Nature, assuming a more lovely face
Borrowing a beauty from the works of grace,"

has scanty recognition in the aspirations and sentiments of the people responsible for this tawdry contraption. According to Loudon, landscape gardening can never rank very high in the scale of the fine arts. It certainly doesn't seem to be making much headway as a fine art in Newport if the above information is correct.

It is very encouraging and pleasing

To improve the quality of seeds to realize the facts as set forth by President Wood in his address to the American Seed Trade Association,

concerning the prosperous conditions prevailing in the seed business of America and the creditable reasons therefor. While, as Mr. Wood remarks, the great prosperity and remunerative prices of the past year may be attributed in part to short crops in some lines yet the increased demand consequent upon the high quality of our seed product has had much to do in developing the present auspicious conditions. Mr. Wood's advice to his fellow seedsmen and growers to do everything possible for the improvement of stock seeds and the production of the largest possible percentage of high grade quality is on sound and patriotic lines. As "the first source of all wealth" good seeds are indispensable and the question of the cost of their production is of secondary consideration as compared with high quality. It is to be hoped that the campaign to this end may be prosecuted on lines of harmonious co-operation between the national government and the seed trade.

The president of the American Seed Trade Association is authorized for the assertion that the seed business holds out inducements second to none for the young man choosing a life avoca-

WHOLESOME CHESTNUTS.

Peaches and nectarines are much prized. Large fruit of both these are much more satisfactory than small fruit. Thinning at one or more stages of their growth has a good deal to do with obtaining large peaches or nectarines. Moisture and the proper disposition of the young wood at this time of the year have also not a little to do with the same ultimate result. When trees require water they should have it in abundant quantity; dribbling is simply an inducement for failure; and when trees are fruiting heavily an occasional application of animal manure or guano water before each regular watering will aid them greatly. Syringing should be done persistently; the surfaces should be kept open and the soil sweet and mellow. Stop the shoots regularly and tie in carefully, avoiding the shading of the fruit as much as possible. There ought to be just enough young wood left to furnish the trees without crowding. One well placed young shoot from the bottom part of the present fruit-bearing shoots will generally be enough, but where the fruit bearing wood is very long, as may be in the case of young, vigorous trees, another shoot halfway between the bottom bud and the top of the shoot may be left.

Greenhouses on private places should always be kept in such a condition that it would be a pleasure to walk through them, so neat, clean and tidy should everything be, and furthermore, there should even in midsummer be something of interest in every house on the place. Do not get the notion in your head that wonderful artificial centre pieces are preferable to loosely and tastefully arranged flowers without iron and timber accompaniments.

PERSONAL.

H. G. Humphrey has taken a position with C. A. Rieman, Connerville, Ind.

E. W. Hampton of Springville, N. Y., was married on June 15 to Miss Lottie Churchill.

Ferdinand Beyer of Detroit and Miss Maud M. Warner of Wayne were married on June 12.

Visitors in Boston: Winfried Rolker, New York City; Mr. and Mrs. Jos. Heacock, Wyncote, Pa.

Mr. and Mrs. John Hanft of New York City started on June 13 for a three months' tour of the continent.

The wedding of Oglesby Paul of Philadelphia, and Miss Laura Little Wilson, took place at Trinity Church, Boston, on June 22.

J. E. Simpson, whose contributions on *Rose Growing Under Glass* to *HORTICULTURE* are proving so interesting, is now located at Clifton, N. J., with his uncle, Robert Simpson.

Col. W. W. Castle of Boston is in Cleveland this week attending the interment of his mother who died last winter and his sister Mrs. Rhoades whose death occurred three weeks later.

A BEAUTIFUL WAYSIDE FLOWER (RANUNCULUS AQUATILIS.)

The accompanying illustration, I venture to think, has a double interest. It shows a wayside pond simply smothered with the flowers of the water crowfoot,—a mass of white, and it also shows a remarkably fine specimen of clipped yew. It is not often that one sees such a fine example of the latter by the wayside; it is more than 100 years old, and, apparently, is growing in a hard gravel road. Doubtless however its roots have found the cool moist soil by the adjoining pond and this accounts for its excellent state of health in a most unlikely position.

The water ranunculus makes a delightful display when it is as rampant as shown in the picture and it would be quite a good plant for the water garden were it not for the fact that when established it spreads so rapidly

as to become a nuisance. However it might well be used to cover the surface of a pond or pool in the wilder part of the garden, where the desired effect is obtained when nature's designs are as closely followed as circumstances will allow. This ranunculus is a quaint and interesting plant. It grows wild in ponds, streams and ditches throughout all temperate regions and is abundant in Britain. It has an extraordinary habit of adapting itself to circumstances. There are two distinct sets of leaves: those that float on the surface are the ordinary rounded, lobed leaves characteristic of ranunculi while the lower leaves, in fact all those that are submerged are divided into many very fine segments, and are exactly like skeleton leaves, offering no resistance to the water. This ranunculus flowers throughout a long season. H. H. THOMAS.

FLOWER NOTES.

A beautiful combination in color and form is brought out by the use of branches of the red leaved Japan maple with cut blooms of the light pink peonies.

Peony blooms sometimes wilt badly after having been cut and are revived with difficulty. This can be avoided by plunging the stems deep in cold water directly after cutting instead of carrying them around and waiting until a quantity has been gathered.

The custom of scattering flowers over the table cloth at banquets, etc., is often abused by the use of material which wilts quickly when out of water. Many dining tables for this reason present a very unattractive and slovenly appearance before the affair is half over.

THE GLORIOUS FOURTH.

Correspondents and advertisers please take notice that as July 4 falls on Thursday our regular publication day, *HORTICULTURE* will go to press one day earlier next week. Send copy to reach us in time, accordingly.

HORTICULTURE IN ALASKA.

J. G. Johnston, of Bear Lake, near Seward, Alaska, is a bona fide farmer who is making a success. He took up a homestead two years ago and is now comfortably settled. He will soon have sixty acres under plow and in pasture. He reports that his radishes, lettuce, carrots, beets, rhubarb and potatoes did as well as those he had grown on Puget Sound. Strawberries did very well as did the blackberries, currants, gooseberries, and raspberries did nicely. Mr. Johnston finds that rose bushes, lilacs and English ivy grow well. He is also having considerable success with poultry.

Experiments are being made to develop varieties of strawberries and raspberries adapted to the Alaskan climate by cross fertilizing cultivated varieties with wild native species. The work is new and there has not yet been time enough to produce results.

The Houghton Horticultural Society, Lynn, Mass., will hold a flower show on June 29.

NEWS OF THE CLUBS AND SOCIETIES

MASSACHUSETTS HORTICULTURAL SOCIETY.

Peony Exhibition.

Peonies had their innings at Horticultural Hall, Boston, on June 22 and 23, but the date was just a day or two too early for a show of any great magnitude and the general displays of other hardy herbaceous material quite overshadowed the peonies. Fine peony collections of greater or less extent were contributed by Mrs. Jack Gardner, Blue Hill Nurseries, William Whitman, E. L. Lewis, R. and J. Farquhar & Co., J. L. Blanchard, Mrs. E. M. Gill, George Hollis and E. J. Shaylor. George Hollis was strong on singles and Mr. Shaylor's display comprised a very interesting collection of named sorts. The tables of hardy perennial flowers were resplendent with irises, oriental poppies, dianthus, pyrethrums and such early summer border bloomers contributed by Blue Hill Nurseries, F. J. Rea, R. & J. Farquhar & Co., John R. Clarke & Co., and others. As usual the display by Blue Hill Nurseries had double value from its elaborate labeling, the botanical name, common name, native home, height, etc., being given on a neat card with every variety shown. The pyrethrums from William Whitman were elegant. J. R. Clarke made the first display of sweet williams for the season, and W. Heustis made an excellent showing of Scotch roses. Peirce Bros. staged a seedling tomato of good promise.

Wm. Nicholson showed two vases of Lady Leonora Bramwell.

TARRYTOWN HORTICULTURAL SOCIETY.

The annual June show of this society was held on June 18. Roses and strawberries which are generally the principal feature at this time were very scarce. Cut flowers, ferns, shrubs and perennials were numerous and of excellent quality, while the vegetable exhibits surpassed those of any previous June exhibition. The F. R. Pierson Co. had a fine display of plants and cut flowers, notable among the latter being a collection of peonies. This was awarded a certificate of merit. Scott Bros. showed an assortment of hybrid rhododendrons in pots. Prizes were awarded to George Wittlinger, gardener to Miss Potter, for sweet peas; W. H. Waite, gardener to Samuel Untermyer, for shrubs; Wm. Grierson, for perennials; George Middleton, for strawberries; Howard Nichols, gardener to Mrs. J. B. Trevor, and John Elliott for vegetables. Special prizes were awarded for perennials to J. W. Smith, W. H. Waite, F. Gibson; for roses to John Woodcock; for greenhouse fruits to George Middleton, George Wittlinger, D. McFarlane; for grapes and table of decorative plants to Robert Angus.

On account of the late season for roses the judges did not award the J. H. Trey cup for out-door roses. Notwithstanding the fact that the door receipts were donated to the new hospital fund the attendance was very slim.

CHRYSANTHEMUM SOCIETY OF AMERICA.

The executive committee for the annual exhibition of the C. S. A. to be held in the American Institute, New York City, on November 6, 7 and 8, consisting of A. Herrington, C. H. Totty and W. Duckham, met at the Institute on Wednesday, June 12, with A. Herrington as chairman, and final arrangements were completed.

Dr. Hexamer informed the committee that all efforts to secure larger accommodations had proved unsuccessful, consequently it was decided to make it exclusively a chrysanthemum show, thereby securing room for the exhibits in the hall of the Institute. The president, A. J. Loveless, presented a premium list which includes four silver cups, gold, silver and bronze medals and many good cash prizes, and many valuable prizes are offered by the Institute, which should bring spirited competition and insure a good show. It was found necessary to make some slight changes in the schedule as previously published in order to avoid a duplication of classes and also to make it possible for every grower of chrysanthemums to participate in the competition. The exhibition promises to be the largest in the history of the society, and everything points to a successful meeting.

The schedule is now in the hands of the printer and will be mailed to members in due course. All interested exhibitors can obtain them by applying to the secretary.

SPECIAL PREMIUM LIST.

Class A—C. S. A. silver cup, 10 blooms any variety, long stems.

Class B—The F. R. Pierson Co. silver cup, 10 blooms each white, yellow, pink, long stems.

Class C—Special silver cup, 12 blooms Miss Clay Frick, long stems.

Class D—J. C. Vaughan silver cup, specimen bush plant, any variety. Open to private gardeners only.

Class E—W. Wells & Co. gold, silver and bronze medals, 6 blooms Miss Miriam Hanky, long stems.

Class F—E. G. Hill, 1st, \$10; 2nd, \$5, 12 blooms Pres. Loubet; \$10 for 10 blooms Mme. Armand Detroyat.

Class G—Henry A. Dreer, 1st, \$10; 2nd, \$5; 24 blooms, 6 varieties, 4 blooms in a vase, 24 inch stems.

Class H—Stumpff & Walter Co. \$10; three blooms Morton F. Plant, 24 inch stems.

Class I—J. M. Thorburn & Co. \$10; 12 blooms, 4 varieties, three blooms in a vase, 24 inch stems. Open to private gardeners only.

Class K—A. T. Boddington, 1st, \$10; 2nd, \$5; 10 blooms Beatrice May, long stems.

Class L—Chas. H. Totty, 1st, \$15; 2nd, \$10; 12 blooms, 12 varieties, 12 inch stems, introductions of 1907.

Class M—Nathan Smith & Son, 1st, \$15; 2nd, \$10, 6 blooms seedlings or sport of American origin, commercial scale.

Class N—Special premium, \$5 each, for largest bloom white, yellow, pink, or any other color.

Peter Henderson & Co. \$25, to the private gardener winning the greatest number of points, to be determined as follows: Any first prize to count 10; any second prize to count 5; any third prize to count 3.

DAVID FRASER.

At the meeting of the New Haven Horticultural Society on June 18 President Ferrier presented Robert Pryde with a set of resolutions commending the excellent services which he rendered the society while president. A smoker followed.

PENNSYLVANIA HORTICULTURAL SOCIETY.

Peony Exhibition.

A two-day exhibition of peonies and roses was held on the 20th and 21st inst. There was also a notable exhibition of hardy perennials, the feature of same being the collection shown by Clement Newbold, Mr. Logan, superintendent, which for variety and novelty was a revelation. Among the features of this display were Chrysanthemums James Kelway, a deep maroon single flower, and Evening Star, a bright yellow, both shown here for the first time. James W. Paul and Jno. W. Pepper also had good collections of hardy perennials on exhibition. In peonies Henry A. Dreer took the lead with a well-grown and correctly named collection of some fifty varieties. Frank Gould from Morris's showed only in a limited way this year, owing to a misunderstanding of the schedule.

No Names and Wrong Names.

The Andorra Nurseries showed some good flowers but this exhibit was marred by being unnamed, and as such had but little horticultural value. The Griscom and Weightman collections of peonies had the names affixed, but we regret to say some were inexcusably incorrect in many instances. Absolution may be pleaded on account of the confusion in peony nomenclature but when a pink variety is labelled *Festiva maxima* or a fluffy white shown as *Golden Harvest* it is time to put the onus where it belongs. We have named names before on this same subject and are glad to say those we named in former years show a marked improvement. Jno. Hedland, gardener to Mrs. W. L. Elkins took first on peonies in class 8, with a well-grown assortment. The rose show was not of much account either in quality or variety. Samuel Hammond, gardener for Rudolph Ellis, showed some good sweet peas and a nice lot of lettuce. A. B. Cartledge, W. Graham and C. Eisele acted as judges.

NORTH SHORE HORTICULTURAL SOCIETY.

At the last meeting exhibits were made by Eric Wetterlow of cut blooms of gloxinias arranged with maiden-hair fern; Jas. McGregor, German and Spanish iris; William Till, perennial lupins; James Scott, rhododendrons, *Xanthorrhiza sorbifolia* and St. Brigid Anemones. At the meeting on July 5 President McGregor will speak on roses and rose culture.

CLUB AND SOCIETY NOTES.

June 27 and 28 are the dates set for the rose and peony show of the Amateur Horticultural Society of Springfield, Mass.

The American Civic Association will hold their annual meeting in conjunction with the National Municipal League at Providence, R. I., in the week beginning November 17.

At the last meeting of the Chicago Florists' Club it was voted to accept the invitation of August Poehlmann to hold the picnic at Morton Grove. A committee was appointed to take charge of the matter.

AMERICAN SEED TRADE ASSOCIATION

The twenty-fifth anniversary meeting of this organization was opened at the Hotel Astor, New York City, on Tuesday, June 25, under auspicious skies and weather that would induce germination in any seed with a spark of life left, and the hundred or more members in attendance were in a most happy frame of mind when, at 10.30 A. M., alderman McGowan, acting mayor of the City of New York, took the platform and in a few eloquent words expressed the delight he felt at the presence in the great metropolis of such an organization as the American Seed Trade Association to celebrate its silver jubilee. He referred to the influence of the seedsmen in conserving the health, wealth and prosperity of the country and hoped that the sociability and interchange of ideas encouraged by this meeting might mark the opening of an era of new ideas and uninterrupted prosperity for the visitors. Chas. P. Braslan responded briefly on behalf of the Society and then President Henry W. Wood proceeded to read his address as follows, which was received with appreciative applause.

THE PRESIDENT'S ADDRESS.

After a few preliminary remarks about the 25th anniversary of the formation of the American Seed Trade Association, president Wood said:

I wish to congratulate the seed trade upon the generally prosperous condition which seems to prevail all over this country. I do not believe that the seed trade as a whole has ever experienced a more prosperous season than the one we have just gone through. I see nothing in the future to mar the outlook for a continuance of that prosperity. Our truckers, farmers and other producers are getting good prices for their products; the population of this country is increasing rapidly, and the present indications are that we are bound to have an increased demand for all products for several years to come. The continued high prices on some lines of seeds have no doubt surprised dealers in these particular lines. This applies particularly in field seeds to clover seed, alfalfa, cow peas, soja beans and other similar forage crops. The high prices, while primarily due to short crops, cannot be altogether attributed to this, but are quite largely due to the increased demand which exists all over the country for these seeds.

The superiority of nearly all varieties of American-grown seeds is coming to be more generally recognized than ever before. American-grown grass and clover seeds of high qualities always command a premium over seeds grown elsewhere, and the fact that European growers who grow vegetable seeds in large quantities secure American-grown seeds for their seed stocks proves conclusively the superior quality of seeds produced in this country.

In view of the fact that the question of the revision of the tariff is likely to be a very live issue in American politics in the near future, I would suggest that the Committee on Customs

and Tariff give this question their most serious consideration, so that, in case the question is brought up in Congress, they can be prepared to make intelligent recommendations as to what seeds should be free and what seeds should be dutiable, for the guidance of Congress in any revision of the tariff that may be proposed. Seeds that can be procured to advantage in this country, whether garden or farm seeds, should receive some measure of protection against the cheap European labor used in the production of seeds on the Continent, and seeds which cannot be grown to advantage in this country should come in duty-free, so as to avoid, as far as possible, putting any unnecessary tax upon the seedsmen, farmers and gardeners here. Efforts should also be made, in case the question does come up, to have specific duties of so much per pound or per 100 lbs. put on, instead of the ad valorem duties, as under the present laws, which, owing to differences in valuations, have caused so much trouble to the seedsmen.

I am not by any means an advocate of cheap seeds. I am always an advocate of seeds of superior quality, and anything that we can do to increase and encourage the production and dissemination of superior quality seeds, should receive the most careful consideration of the seed trade. I think it is a well-recognized fact, that the prices at which a great many vegetable seeds are sold at the present time are too low, and that there should be material advances in a great many lines, in order to avoid the deterioration in quality which is bound to result from low prices and too much competition from the producer's standpoint. The aim of every one engaged in the seed trade should be for improvement in quality of product. The price of seeds cuts a very small figure when you consider the crops produced therefrom, and that farmers and gardeners are willing to pay good prices for first-class seeds is unquestioned. Another point that cannot be too strongly impressed upon seedsmen—particularly those handling vegetable and flower seeds—is the improvement of stocks, and the attention that should be paid to the production of superior and high-grade stock seeds from which their main crops are to be grown. This is a most important matter, and seedsmen should always be willing to pay well for the production of high-grade stock seeds. The true sphere of the seedsmen's trial and seed farms should be in the producing of superior stock seeds to furnish growers, from which to grow the main supplies of seeds handled by the seedsmen.

Another matter, which should receive the most earnest attention of the dealers in field seeds, is in regard to a system of selling seeds according to the percentages of germination and purity. A great many of the wholesale dealers in field seeds, grass, clovers, millets, etc., at the present time do not make any particular analysis for impurities or adulteration, nor test for germination the seeds which they sell, but buy and sell simply on a commercial basis, from the appearance of the quality of the seeds only. I am a firm believer

in the fact that we ought to have as little legislation for the regulation of the seed business as is consistent with the protection of the interests of both the seedsmen and the farmers and gardeners. The less of legislation we have, the better, and the best way to avoid legislation is for the seedsmen to do business on sound business principles; and the selling of grass, clover and field seeds on a basis of the actual percentages of germination and purity is a step forward which would be of great benefit to the seed trade all over this country.

There have been several bills introduced in the various legislatures during the past year, for the regulation of the seed business, and particularly stringent bills were introduced in Iowa and North Dakota, and there was also a bill introduced in the National Congress at Washington, which would have worked a serious hardship on the seed trade if it had been passed in the shape proposed. In view of this agitation, I would recommend that the Committee on Seed Legislation take under consideration very seriously the question of whether it is desirable or not to draft some bill covering the question of the sales of seed, which could be submitted as a satisfactory bill in case any legislation of this kind is taken up in the future either by the state legislatures or by the Congress of the United States.

The most vexed question that the association had to deal with at the Toledo Convention was the question of the system or methods used by the United States Department of Agriculture in making reports on merchants who were found selling seeds which the Department claimed contained adulteration; the report in a great many instances doing manifest injustice to reputable seedsmen. Immediately upon my return from that convention, and before making the appointments of the different committees, I addressed a letter to Prof. Pieters, who was then in charge of that matter, protesting against any further reports being made under the prevailing methods used by the Department of Agriculture. I also suggested at that time a meeting between representative seedsmen and the Department officials, in order to arrive at some satisfactory conclusions in regard to the matter. I am glad to say that the effect of my letter was to bring about a conference of the special committee on Seed Adulteration, members of the Executive Committee and other representative seedsmen, with the Department officials, and further reports in regard to this matter were held up, pending that meeting. The results of the meeting were very satisfactory, the details of which you will have in a report from the Chairman of the Adulteration Committee, Mr. Albert McCulloagh.

I think it would be very desirable for the Committee on Experiment Stations to take up the question of having a Seed Control Station established at each of the State Experiment Stations throughout this country, where seeds could be tested both for the seedsmen and for the farmer. I am sure that any efforts on this line would meet with the hearty approval

and support of the United States Department of Agriculture, and it would unquestionably be of great benefit to the seed trade throughout this country.

I would also recommend that steps be taken by the Committee on Weights and Measures, to secure a uniform system of selling grass and clover seeds by the pound and hundred pounds, instead of by the bushel, as prevails in some of the leading markets of this country.

In regard to Postal Laws; the method of accepting and mailing catalogs in bulk, which was put in force last year, gives the seedsmen some relief where large quantities of catalogs are mailed. Further attempts should, however, be made to bring about a reduction of postage on printed matter, or at least on seed catalogs, to a rate of four cents per pound instead of eight cents per pound as at present; and if this matter is vigorously pressed before the present Congressional Committee on Revision of Postal Laws, I think it would meet with success.

An important matter which was actively considered at the Toledo convention was the question of the governmental appropriation for the purchase and distribution of common varieties of garden seeds. The campaign was most actively and energetically handled by the committee representing the seed trade at large, consisting of Mr. Alexander Forbes, Mr. W. Atlee Burpee and Mr. William Henry Maule. I am sorry to say, however, that further than securing an amendment to the original act the matter fell short of the success which we desired. Mr. Forbes, the Chairman of the Seed Trade Committee, will give you some very interesting information in regard to this matter, in his address on The Congressional Free Seed Distribution, and Mr. C. F. Wood, chairman of the Seed Trade Association committee will also make a report as to the workings of his committee in assisting the general committee in the campaign.

I do not think it advisable to recommend that a fight be continued on the same lines against the free seed distribution as for the past two years; but that a special committee be appointed, who shall act as occasion may offer, in opposition to an abuse that is detrimental to the interests of the seed trade and opposed to the policy of good government. This committee should also appear and make a proper representation of the matter before the House of Representatives Committee on Agriculture and the Senate Committee on Agriculture at the time at which they consider the bill for the usual appropriation for next year.

In regard to transportation matters: active steps should be taken to secure better classifications of existing freight rates upon various seeds. I am convinced that the existing classifications of certain seeds are entirely too high, and that if proper representations are made in regard thereto, it will result in certain seeds being placed in lower classifications, thus enabling dealers to ship at lower freight rates. The question of delays in freights is also a very serious one to seedsmen, especially when shipping to distant points, and I would recommend that this as-

sociation join one of the national freight-service associations for the securing of legislation to modify the abuses existing in this connection.

In regard to Registration Bureau work, a special committee for which was appointed to co-operate with the Department of Agriculture the past year: I was appointed chairman of that committee at the Toledo convention, but upon being elected to the presidency, requested Mr. W. Atlee Burpee to act in that capacity. Owing to press of business, Mr. Burpee advised me that he would be unable to assume the duties of the position; but after correspondence with the Department of Agriculture, I found it was impracticable to do anything in regard to this work this year, so did not make any further move in this direction. The question is a very important one, and if the Department of Agriculture is likely or willing to take up the work outlined at the Toledo convention, a committee should be appointed from the Seed Trade Association to co-operate with them in that direction.

I would strongly recommend that a special committee be appointed to have charge of the revision and getting up of an improved telegraph and cable code for the use of the seed trade at large. The present code, gotten up in 1895, has proved to be of very great benefit to the trade, but it needs revision and enlarging, and I feel that the proceeds from the sale of the code will meet the cost of undertaking this work. Even should this not be the case, however, the Seed Trade Association could not make any better appropriation of a limited amount than to secure a revised and improved code.

In conclusion, I would say that I am more than ever impressed with the future of the seed trade in this country, and that the seed trade is practically only developed in a very small degree, compared to the importance it is likely to reach in the future. With the increase of population, the improved methods of farming and gardening, and the increased prosperity of our agriculturists as a whole, the demand for seeds is bound to increase to a very great extent in years to come, and the seedsmen who develop or plans his business with a view to taking care of this growth and development will reap the benefit. I do not know of any business that offers the same incentive to study and improvement, or that offers more profitable returns for the time and attention given to it, than the seed business. It is certainly a business that is calculated to develop those who follow the occupation, to the fullest extent. The more we know of the seed business, the more we find is to be learned, and the possibilities for development are practically unlimited. Our young men cannot choose any better business, nor a business that offers more possibilities for the future, than the seed business of to-day; and there is no business that tends to bring out more the better qualities of those engaged in it. Travel where you may, you can always find matters to interest and benefit you in the seed business, and there is nothing that broadens and develops and gives more interest to travel, than the fact that

business and pleasure can be combined at the same time.

I wish to thank the members of the Seed Trade Association for the hearty support and co-operation which they have given me in the work undertaken for the benefit of the seed trade during the past year, and to pledge my best efforts for the future towards the development and the best interests of anything that may be proposed in a practical way for the advancement of the general interests of the seed trade.

The Secretary-Treasurer's Report.

The secretary-treasurer report presented by C. E. Kendel of Cleveland showed balance and receipts of \$1,547.34 and expenditures \$927.80, leaving a balance of \$619.54 with an outstanding bill for badges which would reduce same to \$544.54. The association then went into executive session.

Business was resumed at 3 P. M. and the program consisted of papers by F. W. Bruggerhof on "Reminiscences of the Seed Trade," Dr. B. T. Galloway on "What the Department of Agriculture is Doing for the Seed Trade," and S. F. Willard on the "History of the American Seed Trade Association." An invitation to spend the evening at the Roof Garden of the Hotel Astor was enthusiastically accepted.

SECOND DAY SESSION.

The second day's sessions opened at 10.30 A. M. on Wednesday. Committee reports were in order. The membership committee reported favorably on five applications and all were duly elected. The report of Messrs. McCullough and Burpee as delegates to the National Board of Trade meeting at Washington last winter was given at length, and indicated that the deliberations of that body are of much value and weight. Mr. Stokes reported for the committee on customs and tariff, and Chas. N. Page made an important and very interesting report for the postal laws committee, which brought out an animated discussion. S. F. Willard reported for the committee on seed legislation and Mr. Ross for the committee on Experimental Stations. His remarks on seed adulteration tests were very interesting and convincing, and he was followed on similar lines by Mr. Briggs of Toronto on the situation in Canada, both being received with appreciative applause by the meeting. The committee on obituary notices through its chairman, Mr. Green, presented resolutions on the death of Messrs. Otto Schwill of Memphis, Tenn., and H. R. Bassler of Waterloo, Wis. S. F. Willard reported for the committee on disclaimer.

The committee on the recommendations in the president's address then took the floor in the person of its chairman, G. B. McVay, and reported favorably on several of the recommendations therein made. On the proposition for a revision of the American Seed Trade Code a spirited discussion was precipitated, and it was finally decided to present a revised code for the approval of the executive committee. A request to the committee on Experiment Stations was adopted after debate to work for the establishment of seed laboratories at the various State experiment stations to supplement the

work now being done at the laboratory in Washington.

The next thing on the program was the paper by J. Horace McFarland on the Twentieth Century Seed Catalogue. Mr. McFarland was at his best, and his paper, replete with wise criticism and timely advice, was easily one of the best efforts ever made before any horticultural organization in this country. It was illustrated by stereopticon pictures and should have been heard and seen by every seed or nursery house issuing a catalogue. We hope to present the lecture in full in next week's issue. Watch for it.

Adjournment was had until 3 P. M., but it was 3.30 when the meeting was called to order and Alex. Forbes took the stand and read his paper on the Free Seed Distribution, which appears in another column of this paper. Secretary Kendel next reported as a delegate to the National Council of Horticulture, and after discussion the sum of \$200 was appropriated for the purpose of conserving the interests of the seed trade in the published matter sent out by this organization. W. P. Stokes then opened up the question as to whether it is advisable to offer discounts from catalogue prices. The consensus of opinion seemed to be in opposition to a continuance of this practice. The association then went into executive session.

THE BANQUET.

The banquet given at the Hotel Astor in honor of the twenty-fifth anniversary of the birth of the American Seed Trade Association on Wednesday evening, June 26, was a glorious and memorable occasion. One hundred and seventy-five ladies and gentlemen sat at the tables and enjoyed a regal feast while an orchestra discoursed sweet music. Patrick O'Mara, the ideal toastmaster, always witty, impressive and altogether inimitable, presided and called upon the various victims with such persuasive eloquence and amusing anecdotes that all took their medicine with a smile.

The first speaker was President Wood of the American Seed Trade Association, who received a well-merited ovation accompanied by the strains of "Dixie Land." His speech was optimistic and promising for the future prosperity of the seed trade. Capt. Landreth spoke next as a pioneer in the seed trade, and was followed by C. L. Allen, the Nestor of the seed business.

W. G. Johnson, of the American Agriculturist, made the speech of the evening, and told many amusing stories illustrating the growth and development of American Horticulture. President Wm. J. Stewart, of the Society of American Florists, was next called upon to respond for that society. He urged the need of education in horticulture and extended to the Seed Trade Association the best wishes of the S. A. F. and congratulations on the youthful vigor and enterprising policy which had characterized this memorable meeting. Albert McCullough was the next speaker and held his audience spellbound. Chas. P. Braslan told of the great development of the Pacific coast country in agriculture, and intimated that an invitation for the Association to hold next year's meeting at San Jose would be extended. Mr. Briggs of Toronto responded to a very complimentary ovation to

Canada and made an instructive address on Canadian agricultural conditions. W. P. Stokes of Philadelphia testified that, although an ex-president of the Association, he still felt young and eager to work in the ranks, and in conclusion called for a standing toast to Wm. Meggatt, an old-time member of the Association, which was responded to with hearty enthusiasm.

C. N. Page of Des Moines was the next victim of the toastmaster's wit and flattery, who responded appropriately. S. F. Willard was next enjoined to speak for the Nutmeg State, which he did in most acceptable style, adding a pleasant word for his friend and neighbor, Wm. Meggatt. J. Austin Shaw, for the horticultural press, was the next speaker and he was very happy in his allusions to the work and inspiration of the Association and the friendship of the horticultural press for the seed trade. Toasts to the ladies and the committee, the toastmaster, the Blarney stone and Henry Nungesser followed in rapid succession. Mr. Wood of Louisville responding for the latter and expressing regret over his inability to do justice to the subject. Mr. Groot of Holland being called upon, took occasion to express his gratitude for his kindly reception by the American trade.

ELECTION OF OFFICERS.

On Thursday forenoon the visitors enjoyed an auto excursion and on their return the meeting was called to order at noon, the principal business being the election of officers which resulted as follows:

President, George S. Green, of the Illinois Seed Co., Chicago; 1st vice-president, M. H. Duryea, of Henry Nungesser & Co., New York; 2nd vice-president, F. W. Bolgiano, Baltimore; secretary-treasurer, C. E. Kendel, re-elected.

Executive committee: H. W. Wood, Charles S. Burge, Leonard H. Vaughan, Chas. N. Page and Watson Woodruff.

Membership committee: Albert McCullough, S. F. Willard and F. W. Jones.

For the next meeting place California had sixteen votes and Detroit twelve, and decision accordingly will be referred to the executive committee. After the balloting adjournment was made to the reception room, where Walter P. Stokes, on behalf of the association, presented with appropriate remarks a fine binocular field glass to retiring President Wood. Mr. Wood responded, thanking the members for their support during his pleasant term of office and expressing grateful appreciation for the testimonial.

SEED TRADE NOTES.

The Venable Seed Co., Owensboro, Ky., has been petitioned into bankruptcy.

Among the San Franciscoans resuming business since the earthquake is Thomas Meherin who will shortly open near his old location.

A. F. Purcell of the Clipper Seed Cleaner, Saginaw, Mich., made the entire trip to the Seed Trade Convention in New York in an automobile.

J. Chas. McCullough, wife and daughter, who have been attending the Seed Trade Convention in New York sailed for Europe on the 27th. on the Deutschland.

REMINISCENCES OF THE SEED TRADE.

(Read before the American Seed Trade Association by F. W. Bruggerhof.)

An Extraordinary Advertisement.

I cannot let pass an opportunity like the present when I am called upon to relate the reminiscences of sixty years in the seed trade, to first call your attention to part of an extraordinary advertisement which was copied from the New York Commercial Advertiser by the Boston Courier in 1845. It shows clearly that the reminiscences of that advertiser, Grant Thorburn, are much more curious and interesting than mine since they date back to 1799 at a time when he was practically the only seller of seeds in this city. His advertisement goes on to say that he started with three pots of geraniums, a monthly rose and fifteen dollars' worth of seeds, and he makes the further statement that the seeds grew until they filled the whole continent; the rose blossomed until it spread into a tree and the little birds formed their nests under its branches.

It was then, before my time that a host of pretenders came boasting into

F. W. BRUGGERHOF

this country and among them was William Cobbett who arrived with an idea that all Republics were humbugs and so offensive did he become to good Americans that he was obliged to flee to England, whence he returned as a Radical Democrat to open a seed store at 62 Fulton street, this city where he sold ruta бага at \$1.00 per pound and black pigs at \$10.00 each.

My first experience in the seed trade as you know dated from 1847 at which time ruta бага seed, according to a catalogue of that date, did not sell at \$1.00 per pound but rather at 12 1-2c. an ounce, at which price some sixteen varieties of turnips were quoted. The item of black pigs does not appear on our lists and I am sure they were not considered seeds in those days. In that year, 1847, and for several years thereafter the seed trade in respect to flower and garden seeds was in very insignificant proportions through all of this country, and my records show that the actual seedsmen did not exceed in number fifteen or sixteen, and these were all of very modest pretensions and scattered between the cities of New York, Philadelphia, Baltimore, Rochester, Boston, Cincinnati, New Orleans and

St. Louis. Many garden seeds were grown, however, in Wethersfield, Conn., as well as in Lebanon, N. Y., and vicinity—these latter by the Shakers. In the small towns garden seeds were sold principally by druggists, hardware merchants and grocers. Probably many of you are of the opinion that in those bygone days the varieties of different classes of seeds were small but such really is not the case and you will be surprised to find that in the catalogue of Grant Thorburn, 1822, there are quoted some nine varieties of snap beans, and among them you will see Six Weeks, White Kidney and Refugee. Pole beans also appear in some six varieties such as Dutch Case Knife, Red Cranberry, Scarlet Runner, Large Lima, etc. Among the cabbages I find there were twenty varieties, such well known favorites as Early York, Early Sugar Loaf and Globe Savoy appearing.

In 1847 the catalogues were increasing in size and varieties of vegetables in proportion. This catalogue of 1847 shows a corn list of seven varieties some of which are very well known at the present day, like the Early Golden Canada, Early Burlington, Early Tuscarora, Early Dutton, etc. In 1864 other varieties are added to this corn list, like Early Dwarf, Darlings, Eight Rowed, Asylum and Stowell's Evergreen, Sugar, etc. Even in 1847 the list of peas was quite an extensive one there being at least thirty sorts catalogued but of these only two sorts were wrinkled. These were the Tall and Dwarf Knights, and British Queen and the next year brought us that famous old pea the Champion of England. In 1864 a dozen more wrinkled sorts were added and among them was the Advancer. Up to a period beginning about with our civil war nearly all garden peas were imported from England and they were indeed beautiful samples. Up to 1850 and for some years thereafter, all such imported seeds came by sailing vessel; peas and other articles in five bushels casks costing a guinea apiece. Later on, however, they were shipped in very heavy double sacks which were returned to the old country and used over again for several seasons.

Our catalogue of 1864 contained a long list of most of the leading vegetables of to-day and what strikes me as being very peculiar is, and it may be something equally curious to you gentlemen, that the prices of those days averaged about the same as the prices of the present day and the only marked exception to these prices was that of the Advancer pea which had only been recently introduced as a very fine wrinkled sort and it was quoted at \$1.00 a quart, while all the other varieties were listed at from 20 to 60c. a quart.

The high retail price for seeds began in 1867 and continued for some ten or eleven years during which period the ruling price for Valentine, Mohawk and Refugee beans was \$10.00 per bushel. Beets were then quoted at from \$1.00 to \$2.00 per pound; cabbage from \$2.50 to \$8.00 a pound; leek from \$1.00 to \$7.00 a pound; lettuce from \$2.00 to \$5.00; onions from \$3.00 to \$6.00; peas (the common sorts) 50c. per bushel; Little Gem, \$28.00 per bushel and \$1.00 a quart; York-

shire Hero \$18.00 per bushel; Champion of England \$10.00 per bushel; peppers from \$5.00 to \$7.00 a pound; radish from \$1.00 to \$1.50 a pound; turnips from \$1.00 to \$2.00 a pound. In 1869 all onions were quoted at \$6.00 per pound. It was in 1870 that the Egyptian beet was a novelty and its seed sold at 50c. an ounce. In 1873 I found Conover's Colossal asparagus listed at 50c. per ounce; Trophy tomato \$10.00 a pound, while the other varieties of tomato were quoted at from \$3.00 to \$4.00 per pound. Queen onions I find listed at \$10.00 per pound, and even up to a period as late as 1875 Carter's Premium Gem peas were quoted at \$1.50 a quart; the Blue Peter variety at \$1.25 a quart. The Beauty of Hebron potato was first offered for sale in 1878 according to Thorburn's catalogue of that date.

This parity of prices applied only to seeds and certainly not to the Holland bulbs, for I have before me now

Witloef was listed—so many years ago—yet it seems scarcely known by anybody even at the present date, though quite large quantities of it are imported weekly from France and we all know how easily it may be

a small invoice dated 1806 rendered by our house, a photographic copy of which has been preserved, showing hyacinths charged at 3s. 6d. sterling each and tulips at 2s. sterling each. It is also interesting to note that at the date of the invoice mentioned English money was the only currency used here. It seems curious too, that in our catalogue of that date the Brussel

cultivated in our own gardens either for salads or for cooking.

Considering the many voluminous and many beautiful catalogues issued by our seed houses to-day, our modest pretensions of some sixty years ago seem plain and even insignificant. The increase in the size of the present catalogues comprising as they do so many novelties and new

ZIRNGIEBEL'S GIANT PANSIES

and beautiful things goes to show how our education and tastes in such matters are increasing from day to day and how of all the luxuries and industries, that of the cultivation of flowers and vegetables is the most innocent. It is productive not only of many gratifications but of many advantages also of a permanent character. The care of a garden is likewise a recreation and conduces materially to health, promotes civilization and softens the manners and tempers of men. In their growth from the tender shoots which rise from the earth through all the changes which they undergo to the period of their utmost perfection, man beholds the wonderful works of creative power. He views the bud as it swells and looks into the expanded blossom, delights in its rich tints and fragrant smell, but above all he feels a charm in contemplating the movements and regulations before which all the combined ingenuity of man dwindles into nothingness.

Chas. H. Vick of Rochester states that his firm will plant sufficient of Vick's Branching Aster, white, to produce 200 pounds of seed. As there are seven colors in this popular florists' aster some idea is afforded of the enormous demand for the seed.

ALL GIANTS are used in mixing our PANSY SEED

THE CONGRESSIONAL FREE SEED DISTRIBUTION.

Paper read before American Seed Trade Association by Alex. Forbes.

What is known as the Congressional Free Seed Distribution is a rare old plant which first saw the light of day in 1839. It was a modest little specimen when first introduced. Congress at that time appropriated \$1,000 for the purchase of new, rare and valuable seeds, etc., to be distributed throughout the United States, for the purpose of increasing the output of agriculture. There was no Department of Agriculture in those days, so the fund was placed in the hands of the Commissioner of Patents, and as far as can be learned, the distribution was conducted wisely and in accordance with the intent of the framers of the measure.

Dr. Galloway, Chief of the Bureau of Plant Industry, in writing to a Congressman within the past year says:

"When this distribution was first undertaken, a great many years ago, there is no doubt but that it accomplished much good because at that time the seed industry was not as thoroughly organized as it is today. The practice of ordering through the mails from seed catalogues was not then in vogue and it was extremely difficult for a person living in an isolated locality to secure good garden seeds."

The Doctor wisely adds:

"This condition has changed, however, and today it is quite possible for anyone to buy garden seeds of the same varieties as we distribute."

The appropriation was modestly increased by Congress from year to year, in keeping with the expansion of the country, until 1865, when it amounted to \$61,000. The distribution remained in the hands of the Commissioner of Patents until that year, when the Department of Agriculture was organized, with a Commissioner of Agriculture as its head. The Hon. Jeremiah Rusk was the last Commissioner of Agriculture and the first Secretary of Agriculture, with a seat in the Cabinet.

With the exception of the years 1867, 1881 and 1882 (when the appropriation was over \$100,000) it rarely exceeded \$80,000. In 1885, however, it reached \$200,000, a mark

and has steadily increased during the past twenty years, until it reached the enormous sum of \$290,000 in 1905. So long as Congress kept within reasonable bounds, there was very little complaint on the part of the people. Over twenty years ago, there was an effort made by the seedsmen under the guidance of the late James Vick, Jr., to stop this Congressional Free Seed Distribution, but it met with very little success. Not more than five members of the House voted for its discontinuance. Since then, one large house in the middle west attempted, single-handed, to fight the distribution, claiming that Congress had no legal right to distribute common, ordinary varieties of garden seeds, when the Act called for new, rare and valuable sorts,—in other words that it was unconstitutional.

This case, however, was never brought to a test.

Then, about six years ago, a delegation of seedsmen, representing the leading eastern houses, waited on the Agricultural Committee of the House and laid their views before it. After hearing what the delegation had to say, the Hon. James W. Wadsworth, who was the Chairman, informed the delegation that he did not blame the seedsmen for trying to stop this Congressional Free Seed Distribution as then conducted, but that as Congress and the majority of the Committee were in favor of it, he could not hold out any hope for a change.

I was a member of that delegation and well remember that when we got back to the hotel and took up the afternoon papers, we found, to our surprise, that while we were having this interview with the Agricultural Committee of the House, Senator Tillman of South Carolina succeeded in getting an appropriation of an extra \$100,000 through the Senate, for free seeds. We felt there was no hope and came to the conclusion that there was nothing for us to do but to let Congress increase the appropriation until the evil became so glaring that it would right itself.

In the early part of 1906 there came a change. Up to this point, I have stated briefly the origin, history and

growth of the Congressional Free Seed Distribution. It has cost the country many millions, but so long as it was confined to the distribution of new, rare and valuable varieties, as was originally intended, it performed a useful purpose and was considered well worth what it cost the country, but as it is and has been conducted for many years, it is a ridiculous failure. Never was this more clearly demonstrated than during the past year.

In February, 1906, the Agricultural Committee of the House recommended leaving out of the Appropriation Bill the item for free seeds. This was a purely voluntary act on the part of the Committee and was as much of a surprise to the seed trade as it was to the country at large. The Agricultural Committee of the Senate was also in favor of the change. Even the Department of Agriculture endorsed the recommendation of the two Committees. The seed trade thought it was the least they could do to wait on the Agricultural Committee of both Houses and do what they could to strengthen their hands. To this end, representatives of the leading seed houses held a meeting in Washington, D. C., on the fifth day of March, 1906, and appointed a committee with power to act. A fund was raised, and the services of Wm. Wolff Smith of Washington were secured to look after their interests and keep track of what was going on at the

Welcome Elks and Florists

Don't fail to visit the Fraternal Headquarters in Philadelphia

We cordially invite the Florists who will visit Philadelphia next month to attend the Convention of the Benevolent Protective Order of Elks, to make our building their headquarters while they are in this city.

We are centrally located, a little over one block from the Lodge. We shall be decorated in your honor. Come to us. Bring your family to us, meet your friends here. Have your mail sent here. We want you to feel at home in the city of Brotherly Love.

H. BAYERSDORFER & CO., 1129 Arch Street, Philadelphia, Pa.

Capitol with regard to the free seeds. Very soon this became a live issue throughout the country. The seedsmen had a hearing before the Agricultural Committee of the Senate, May 11, 1906, and also before the Agricultural Committee of the House, December 12th and 13th, 1906. Those of you who have not copies of the reports of these hearings would do well to get your Congressmen to send them to you. You will find them very interesting reading. They are certainly unique and Wm. Wolff Smith and all connected with them deserve the thanks of the American Seed Trade Association for the manner in which they presented their case.

When the matter was finally fought out on the floor of the House, our representatives, by a majority of 136 to 84 voted for a continuance of the old plan. Never was there a more striking instance of the inability of the House to overcome its prejudices and give up a cherished custom,—that of handing out annually to their constituents a paltry political package of five papers of common garden seeds, which, according to Dr. Gallows, cost the Government one-half a cent apiece and which could certainly be procured without difficulty at any crossroad store.

We are told the farmers demand them, that Congress has done very little for the farmer, anyway, and that the least we can do is to allow our members of Congress to hand out to their farmer friends, once a year, with their compliments, this miserable little package of garden seeds of varieties that have been before the public for ten, twenty, thirty and forty years and which are not worth the cost of transmitting them through the mails.

If Congress must do this, let them send the farmers something that will tend to educate them. Let them send new and rare varieties that will fill up a blank in the existing list, but don't let them send out these common varieties which cost them next to nothing and which cannot accomplish any useful purpose whatever.

Looking at it from the standpoint of the American Seed Trade, is there any excuse for the existence of the Congressional Free Seed Distribution today, or has there been any for the past forty years? Has the American

Seed Trade been so behindhand in its methods and so inattentive to business, as to need the fostering hand of the Government to help it to place what is even new, rare and valuable, before the farmers and gardeners of the country? I think not! On the contrary, as a trade, as a body of men, they have shown marked ability, a strong desire to keep abreast of the times, to find new, rare and valuable plants, seeds and bulbs wherever they were to be found, the world over, and have endeavored to adopt the most up-to-date and approved methods that could be found. Indeed, it would be hard to find a body of men in any walk of life, that has displayed more resource, intelligence, activity, and sound business management than this very trade which Congress is competing with, under the guise of helping the farmer.

Looking at it from the farmers' standpoint, is there any excuse for the distribution of common varieties of garden seeds? What good is it doing the farmer? It has been clearly shown by the largest body of farmers known, the National Grange, with its 800,000 members, that they would rather have new, rare and desirable varieties that will suit their section and their soil, than the common kinds that have been sent out.

It is also shown by the Agricultural Press that they do not want this waste of public funds to continue. To show this, I will read the following:

National Agricultural Press League,
Office of Secretary,
Chicago, Ill., December 6, 1906.
NATIONAL AGRICULTURAL PRESS
LEAGUE ON THE FREE DISTRIBUTION OF SEEDS.

At the annual session in Chicago, December 5, 1906, the National Agricultural Press League adopted by a unanimous vote the following resolutions:

Whereas, Notwithstanding the protests of the farmers of the country, irrespective of locality or political affiliations, Congress at its last session again determined to continue the doubtful policy of distributing seeds of common and well known varieties; and

Whereas, The National Grange, the Farmers' National Congress, and hundreds of State and local agricultural and horticultural societies have adopted resolutions denouncing this practice and calling on Congress to turn the money over to the Department of Agriculture for work with the State experiment stations in the developing new varieties of seeds and plants suitable to the localities; and

Whereas, We believe that a vast major-

ity of the farmers of this country are opposed to the existing policy; therefore, be it

Resolved, That the National Agricultural Press League hereby reaffirms its opposition to the Congressional free seed distribution as at present conducted.

Resolved Further, That copies of this resolution be sent to all members of this league and to the members of the Committee on Agriculture of the United States Senate and House of Representatives.

The members of the National Agricultural Press League are: Southern Ruralist, Atlanta, Ga.; Farmer's Call, Quincy, Ill.; Farm Home, Springfield, Ill.; Prairie Farmer, Chicago, Ill.; Live Stock World, Chicago, Ill.; Farmer's Guide, Huntington, Ind.; American Farmer, Indianapolis, Ind.; Up-to-Date Farming, Indianapolis, Ind.; Homestead, Des Moines, Iowa; Kansas Farmer, Topeka, Kans.; Missouri Valley Farmer, Topeka, Kans.; Farm Poultry, Boston, Mass.; Farm and Home, Springfield, Mass.; Michigan Farmer, Detroit, Mich.; Rural Magazine, Detroit, Mich.; Farm, Stock and Home, Minneapolis, Minn.; Farmer and Stockman, Kansas City, Mo.; Drovers' Telegram, Kansas City, Mo.; Fruit Grower, St. Joseph, Mo.; Colman's Rural World, St. Louis, Mo.; National Farmer and Stock Grower, St. Louis, Mo.; Northwestern Stockman and Farmer, Helena, Mont.; Metropolitan and Rural Home, New York, N. Y.; Ohio Farmer, Cleveland, Ohio; Gleanings in Bee Culture, Medina, Ohio; Farm and Fireside, Springfield, Ohio; Farm News, Springfield, Ohio; Pacific Northwest, Portland, Oreg.; Farm Journal, Philadelphia, Pa.; National Stockman and Farmer, Pittsburgh, Pa.; Parks Floral Magazine, La Park, Pa.; Southwestern Farmer and Breeder, North Fort Worth, Tex.; Farm and Ranch, Dallas, Tex.; New England Farmer, Brattleboro, Vt.; Hoards' Dairyman, Fort Atkinson, Wis.; Wisconsin Farmer, Madison, Wis.

Very respectfully yours,
JAMES M. PIERCE, President.
JOHN M. STAHL, Secretary.

To be continued.

MOVEMENTS OF GARDENERS.

Ernest J. Brown, late superintendent to Geo. P. Tangeman, Glen Cove, has accepted a position as superintendent to Gustav H. Schwab, Scarborough, N. Y.

Nicholas Christian, gardener at the Prescott Bigelow estate, Manchester, Mass., will succeed MacKewan as gardener at the W. D. Denegre estate, West Manchester, Mass., July first.

Alex. Burr, gardener to Mr. Saltonstall for the last four years, has been appointed by Olmsted Brothers, Brookline, head gardener to Mr. W. A. Rogers, Kennebunkport, Maine. Mr. Burr is a member of the Gardeners' and Florists' Club of Boston.

During Recess.

DETROIT FLORIST CLUB.

At the last meeting Frank Holznagel had promised a paper but having just recovered from a short illness he was unable to discharge this duty. The club intends to arrange for several outings for the members and their families during the hot season. They start the ball rolling by going to Algonac on the 26th and woe be to the numerous fish abounding there when the Detroit florists arrive.

NEW YORK FLORISTS' CLUB.

The annual outing of the New York Florists' Club will take place on Tuesday, July 2. The gentlemen who have been working so zealously for the success of this affair are to be congratulated on the excellent program of sports arranged for the day, in which the ladies and children are especially provided for. The list of prizes donated by generous club members is a big one. Every florist in the neighborhood of New York city should provide himself with tickets for self and family and join the merry throng on this enjoyable excursion to Witzel's Grove.

WARETOWN ROD AND GUN CLUB.

The annual opening of this club of which John Westcott is the presiding genius took place on Friday, 21st inst. The usual crowd of florists and others closely identified with the trade attended. Fishing, shooting, quoits, and other pastimes, filled in the time of the opening day, as also of the two following days. Ideal weather prevailed but the fish were not biting. Of the crowd aboard the yacht, the Jonah responsible was not discovered. The commissariat department was ably handled as usual and everybody had a good time—and that was the main object of Mr. Westcott on this occasion, as on all others when he invites his friends to take a day off with him. Harvey Cedars and Barnegat City were among the places visited in the sailing trips of Saturday and Sunday.

BUSINESS CHANGES.

Wm. Terrell & Son have transferred their business interests to Warsaw, Ind., from Marion.

James H. Cleary, manager during the past five years for William P. Peirce, has bought out the business of Edward S. Haskell at 7 Pleasant street, New Bedford, Mass. Mr. Cleary is well advanced in his vocation, having been employed eight years by William Peirce, five years by H. A. Jahn and five years by William P. Peirce.

CUT FLOWER MARKET REPORTS

BOSTON Market conditions at the present time are in a bad way, with the rush of weddings and commencements over and a continued spell of hot weather the effect is felt both on prices and condition of stock. Flowers of every description show the effects of the weather, complaints being received on every hand. Peonies and Jacqueminot roses are plentiful, but have little demand owing to the fact of being so late. American Beauties faring no better. Kaiserin and Carnot are in good condition and are selling well, being the one redeeming feature of a wilted market.

The past two weeks **BUFFALO** found the market overstocked on all lines, although trade has been good considering the amount of stock handled. Roses and carnations have been too plentiful and the severe warm weather has made the keeping quality of short duration. Sweet peas and lily of the valley have had a fair demand, prices holding well. Now that the outdoor stock has appeared in large quantity and fine quality it is preferred. The week of June 24 being school week, a good demand is looked for.

At last the warm weather has come, and everything is jumping ahead. As expected stock both greenhouse and hardy is coming in fast, and in such enormous quantities that prices have had to give way

considerably. There has been nevertheless an excellent business the past week, even though our customers are beginning to go away for the summer. The seedsmen are on their last run for what has been the longest drawn-out season in years.

While commencement exercises kept things humming very lively the **DETROIT** local market experienced its first glut in carnations which could be relieved through fakers only. Most of the craft are thinking how to spend the vacation. Fortunately the past season has been so prosperous that the necessary wherewithal is there to make it possible.

In consequence of the warm weather more flowers are arriving than for a long time. Social events are few and far between. Roses of all sorts are showing plainly the effects of the heat. Outdoor flowers are in heavy supply. Sweet peas are in good demand and an abundance of splendid stock is to be had. Lilies and peonies are here in almost any quantity. Lily of the valley is fine but difficult to dispose of. Carnations in all grades are in excess of the demand. Greens of all kinds are more abundant and have a good call.

Summer languor prevails all over the flower markets. Nothing doing and apparently everybody taking the situation in philosophical

manner, for one hears no complaint. Quality of stock goes down as the mercury goes up, and the hot air period is on in earnest. This latter remark has no bearing on the picnic which is to take place, rain or shine, next Tuesday. The street will not miss the boys for one day, and the U. S. Express wagons are a hollow mockery. Wait a few weeks.

PHILADELPHIA Mysterious disappearance! A handsome reward will be given to any one who will find the cut flower market of this locality which mysteriously disappeared last week, and of which after the most diligent search by all concerned no trace has been found to date. One or two of the growers and distributors found a few of the cast-off garments of the flight—and fondly imagined they were almost in sight—but outside of these false alarms nothing has materialized. The flowers to supply the animal were here in abundance—in fact in such quantity as has never before been seen here within the memory of the oldest inhabitant—but they might have as well been kept at home, as they were not wanted. Anxious parents, the immediate relatives and retainers, as well as the general trade, eagerly await any news of the fugitive, and it is needless to say that no prodigal son ever received a warmer welcome than will be accorded the wanderer on its return.

GETMORE BOX FACTORY, Incorporated,
BELLEVILLE, ALA.

NEWPORT TRADE NOTES.

Bruce Butterson shows no signs of permanent improvement, according to latest reports.

Mr. Guerineau, of the newly incorporated firm of T. J. Grey Co., was a visitor this week.

Business is decidedly brisk, and it looks as though it might continue for some time. This applies chiefly to plants, although the demand for cut flowers has increased enormously in the last few days. Nearly all the bedding plants grown by local men are cleaned out. Prices were and are a trifle higher than last year, especially for geraniums of good quality. Begonias have sold exceedingly well and at good figures.

Headquarters for

FANCY and DAGGER FERNS

SELECTED STOCK

Fancy, \$1.75 per 1000; Daggers, \$1.50 per 1000.
Laurel Festooning, best made, 4c, 5c and 6c per yard; once used, always used. Laurel Wreaths, \$3.00 per doz.; cheaper grades if wanted. Southern Smilax, fancy stock, 50-lb. cases, \$5.50. Branch Laurel, 35c per bunch. Princess Fine, 7c per lb. Brilliant, Bronze or Green Galax, No. 1 stock, 75c per 1000, or \$6.50 per case of 10,000.

TURE" should be sent to 11 Ham-
ilton Place, Boston.

HELP WANTED

HORTICULTURE needs a wide-
awake representative in every town
in the land. Good commissions paid
on advertising and subscriptions. If
you are ambitious, write for terms.

WANTED—Single head gardener on pri-
vate estate with first-class experience un-
der glass and outside. Protestant. Wages
\$50 to \$60 per month and board. Reply to
"Gardener," No. 6 South Market Street,
Boston, Mass., care of R. & J. Farquhar
& Co.

SITUATIONS WANTED

SITUATION WANTED

As working foreman or head gardener.
Age 38; married. Best of reference. New
England preferred. H. W., care HORTI-
CULTURE.

POSITIONS WANTED for head garden-
ers and assistants; for further information
apply to W. W. Rawson & Co., 5 Union
St., Boston, Mass.

NEWS NOTES.

John Lamont, Jr., will start in the
florist business in S. Hadley Falls,
Mass.

W. L. Taylor of Minnesota and J.
B. Saunders will start in the nursery
business near Mandan, N. D.

F. & W. Topel have taken the
greenhouses of C. Bussjaeger at St.
Paul, Minn., for a term of years.

A new office and salesroom have
been added to the equipment of the
Riverside Greenhouses, Lansing, Mich.

Arthur Kidder has purchased the
greenhouses of Jones Potter, North
Beverly, Mass., and will move them
to Conant street.

The New England Trade Press Asso-
ciation met on June 20 at the Boston
Club and elected officers as follows:
Pres., Henry L. Johnson; vice-pres.,
E. B. Pillsbury, F. F. Cutler, W. J.
Stewart; sec-treas., L. F. R. Langelier;
ex. com., W. L. Terhune, I. P. Fox.

CLUB AND SOCIETY NOTES.

The rose show of the North Shore
Horticultural Society will be held July
10 and 11, on the grounds of the Essex
County Club, Manchester, Mass.

A preliminary meeting of the dahlia
growers of Ansonia, Derby and Sey-
mour, Ct., was held on June 21, and a
committee was appointed to prepare
by-laws and rules to be presented at
a meeting on July 12, when permanent
officers will be elected.

On June 17 Jno. Trumbull addressed
the members of the New London
County Horticultural Society (Conn.).
on "Our Native Orchids." Under the
auspices of this society State Ento-
mologist W. E. Britton delivered an
illustrated lecture on June 22 on "Care
of trees and how to preserve them
from insects."

The Gardeners' and Florists' Club
of Boston will hold a field day in the
Boston Parkways on Saturday, June
29. The place of meeting is Audubon
road, Riverway, and Brookline avenue.
Members should take Brookline ave-
nue cars via Ipswich street, or any
Beacon street car to Audubon road,
then walk (two minutes) to River-
way.

A DESIRABLE GIFT FOR YOUR EMPLOYEE.

There can be no more useful and ap-
propriate present than a subscription
to HORTICULTURE. The more he
reads HORTICULTURE the better
service he will render you. If you
want to give five or more we will be
glad to make a special discount, on
application.

- 857,412. Sweep Rake. Frederick Nelson, Driscoll, N. D.
- 857,503. Riding Attachment for Plows. Edward Walbaum, Webster, S. D.

Among the signs of advancing civilization in Harput, Turkey, is a plan to establish a model farm where American methods and implements will be used and it is expected that a graduate from the Mass. Agricultural College at Amherst will be secured to take charge of the enterprise.

CUT FLOWER MARKET REPORTS.

Continued from page 857.

June weddings and TWIN CITIES graduating exercises have kept the trade doing something until this past week but it appears that trade has now dropped flat. Stock is plentiful and can be bought at close prices. Roses are in abundance and a great many of them find their way to the dump-pile. Carnations are coming in smaller although as yet the retailers have not reduced their prices. Trade will be dull from now on.

All flowers have WASHINGTON taken a tumble in price and are coming in in quantities, particularly carnations. Roses seem to be a little more in favor than anything else, Richmond taking the lead. The hot weather is damaging the sweet pea crop to a marked degree. Everything is in need of rain. A good shower now would do untold good to both vegetables and flowers.

INCORPORATED.

Glen Bros., Rochester, N. Y.; E. S. Mayo, G. M. Rappert, R. A. Mayo; capital, \$650,000.

Albert F. Amling Co., Maywood, Ill.; A. F. Amling, Caroline Amling, Wm. Collatz; capital, \$50,000.

The Metz Floral Co. has started in business at Page Ave. and King's Highway, St. Louis.

WE TOLD YOU SO A YEAR AGO

Wherever you find a florist who has used our Circulator you can get a testimonial as to its economy and efficiency. Nothing in the world can take its place. It soon pays for itself in fuel saved without counting the contentment.

HERE'S ANOTHER SATISFIED MAN

This letter from a Florist who is recognized as one of the most progressive young men in New England is worthy of attention

COL. W. W. CASTLE, Boston, Mass.

Needham, Mass., June 24, 1907.

Dear Sir:—The Circulator installed for me last fall has given me entire satisfaction and works well. With the quick circulation received from its use there certainly is a saving of fuel, and if a person with a system not piped so as to get a good circulation was to try the Circulator before laying out too much expense on alteration of piping, I believe they would receive the benefit required.

Thanking you for the uniform courtesy, promptness and business methods you and your employes have always shown me, I remain,

Cordially yours,

(Signed) PAUL E. RICHWAGEN.

Watch this space next week. We shall present some more letters equally convincing as to the efficacy of heating apparatus installed by us

In the meantime write for particulars of our new

STEEL PLATE HOT WATER BOILER

built especially for greenhouse heating. Piping and fitting done according to most approved methods and satisfaction guaranteed. Perfect circulation in all kinds of weather absolutely assured by the use of our

ELECTRIC CIRCULATOR. ATTEND TO IT NOW.

W. W. CASTLE, Heating Engineer, - 170 Summer Street, Boston, Mass.

BEWARE OF FIXED IDEAS

By that we mean, don't be the man who just because he has been moderately successful with the all-cypress house, feels that he has the whole greenhouse building matter down to a fine point. We would discard our entire Iron Frame Construction tomorrow if we were certain of something better. That's where we stand on improvements! Although improvements are constantly being made on our Iron Frame Construction, the main features have remained the same for years. It is not a fixed idea, however, but a proven fact that for growing records, lightness and freedom from repairs, it makes a house you can't beat. Write us.

HITCHINGS AND CO.

GREENHOUSE DESIGNERS AND BUILDERS.
Manufacturers of Heating and Ventilating Apparatus.

1170 Broadway,

NEW YORK.

WE TOLD YOU LAST WEEK ABOUT THAT NEW ENCASED, SELF OILING GEAR OF OURS; NOW, HERE'S A WORD ABOUT THE STANDARD ONE

It's used at the ridge, and for side ventilation. It has the same machine cut worm and machine turned bearings. The shaft is round and the gear wheel double clamped to it and then set-screwed beside — there can be no slipping, and that's a mighty strong point.

SAME WAY WITH THE ARMS—NO SLIPPING CHANCE THERE EITHER. SEND FOR PRICES AND GET YOUR NAME ON THE LIST FOR NEW CATALOG WE ARE PRINTING

LORD & BURNHAM CO.
Greenhouse Designers and Manufacturers
1133 BROADWAY, cor. 26th Street, N. Y.
BOSTON Branch: 819 Tremont Building
PHILADELPHIA Branch: 1235 Filbert St.

THE usual iron frame house looks full as well when benched up and stock well grown, but it's with an almost empty U-Bar house like this one, that you get the real value of the wonderful lightness and grace of U-Bar construction. That gutter free curved eave makes an unobstructed space from ridge to sill, for the 24 inch glass. The partitions are so light that without the doors they would scarcely be noticeable.

This particular house is left open in the centre for the taller plants in pots.

It's a splendid, clean cut inviting sort of a house, as thoroughly practical as it is attractive.

Did you get a catalog?
